PREFACE.

Presenting to the public, a second edition of my Geographical Dictionary, I beg leave to state briefly the improvements and additions that have been introduced. America generally, and in particular the United States, are certainly the most important objects in any elementary work on Geography published in the latter, but I have found it necessary to introduce many new, and to very much enlarge several original articles relating to Asia, Africa, Polynesia, and even to Europe. In the latter interesting section of the Earth, the principal articles are generally new modelled. This is the case in a pre-eminent degree respecting rivers and canals. Under the head of Great Britain will be found a condensed view of that monarchy; the article itself is not in any edition of Brookes' which I have seen. The following heads contain essential matter, and the list might be very much extended. Austria, Amsterdam, Baltic, Bavaria, Black-Sea, Caspian Sea, Caspian Basin, Danube, Elbe, Euphrates, Europe, Ganges, Ghauts, Great Britain, Greece, Haemus, Mountains, Havel, Hindoostan, Ionania, Japan, Jerusalem, Jibbel-Aures, Lapland, Liakura, Mantshuria, Metzovo, Missalonghi, Marmora, Mediterranean, Monguls, Negroponte, Niger, Nile, Oder, Persia, Prussia, &c. The article Earth, is new to this treatise, and was introduced from reasons explained at the commencement of the article itself.

It is, however, in the list of American articles that the greatest augmentation has been made. Beside all others, upwards of 2900 post offices have been added. As the post office list is so frequently swelled, it is beyond the power of any Geographer to keep pace with that department, some offices must be omitted in despite of any practicable vigilance.

An improvement of, in my opinion, incalculable advantage has been made in the general description of the counties in the United States. I have carefully given their central latitude, and central longitude from Washington City. This will enable the reader to locate any given county, which, as they exceed eight hundred, must render the volume much more easy to use to advantage as a work of reference.

Throughout the whole treatise I have endeavoured to give as ample description as my limits would admit. This is the first Geographical Dictionary, in which a detailed and regular description of the counties of the United States has been inserted. In the former editions of Brookes and in several other similar productions, few, comparatively of the United States counties, were so described, as to be easily found on a map from the description. In this volume, their relative position, length, breadth, area, and in a majority of cases the general features, and in several hundred the staples of the counties are given. No difficulty can therefore occur in finding any given county.

The elements of the population of the United States, oppose great difficulties to a brief classification. Daily reflecting on this subject, I adopted the tabular form, from a conviction, that no other could answer, to render the volume a facile work of reference. So much of the most essential legislation, and so many of the most vital questions in domestic politics, demand a thorough knowledge of the local position and relative increase or decrease of population, that too much perspicuity cannot be given to that subject. In those states where the population is composed of three bodies distinct in features, and in political condition, viz: Whites, slaves, and free coloured persons, tables have been calculated with great labour, to exhibit the relative position and number of each class.

Respecting the new states and territories, I have deemed it not only justifiable, but indeed requisite, to be more ample than is common in a Geographical Dictionary, comprised in a single octavo volume.

It will not be presumption to say, that much is added to the Geography of the United States, by this publication. The editor has travelled extensively over the states of the south, west, and north-west, and wrote respecting most of those sections from personal observation.

It was very desirable, that more precise information could have been given on South America; but so confused and indefinite are the political boundaries in that country, that much uncertainty prevails respecting the extent of almost every subdivision. I have nevertheless, in the article America, and in the detached articles, inserted a general view of that portion of the Earth, with all the precision, that the state of our information renders practicable.

For the first time, it is probable, in any similar treatise, the recent subdivisions of Mexico, into states and territories, are incorporated into this Dictionary.

With all practicable diligence, it cannot be reasonably expected that a work of such texture and magnitude, can be free from error; such exemption is not in the nature of things possible; but it has been the sedulous endeavour of the editor to render his production a safe and commodious book of reference, and as free from either omission or mistake, as the present state of the science would admit. My absence from the printing

office, precluded a revise by my own hand, and occasioned some typographical errors, the reader will, therefore, I hope with some indulgence, correct the following, and others of a like nature which may have been overlooked.

In Art. Alps, for Jungfranhorn; read *Jungfrau*.
 Amazon, for Tunguragna, read *Tunguragua*.
 America, for Sashashawin, read *Saskatchewan*.
 Baltic, for Hymen, read *Kymen*.
 Baltic, for Cowland; read *Cowland*.
 Chihuahua, and some other places, Sonora y Sinaloa, has been substituted for *Sonora y Cinaloa*. This mistake has arisen from the compositor misunderstanding the use of the *y* as a Spanish copulative, equivalent to *and* in English.
 Earth, for Galeira, read *Galeria*.
 Elbe, for Muldan, read *Muldan*.
 Fäerne, for Fäerne, read *Täleme*.

In Art. Lybian Desert, for Barea, read *Barca*.
 Lymford, for Lymford, read *Lymford*.
 Mainotes, for Cacovougries, read *Cacovounies*.
 Mechanicsville, Montgomery city, Md., for 20 ms. N. from W. C., read 18 ms. N. from W. C. and for Lat. 39° 15' N., read Lat. 39° 9' N.
 Persia, for 140,000 sqms., read 1,400,000 sqms.
 Polynesia, for Fleyjee, read *Feejee*.
 Do. for Owlyhee, read *Owhyhee*.
 Pyramids of Mexico, for Touatiuh, read *Tonatiuh*.

WILLIAM DARBY.

NOTE TO THE READER.

In forming and adopting the subjoined abbreviations, I have been careful to avoid any equivocal in their use, by preserving, as far as practicable, the commencing sound of the names. Where no particular meridian is referred to, the longitude is from London; but where "lon. W. C." is used, reference is made to the Meridian of the Capitol in Washington City.

is somewhat dangerous,) and a considerable trade in corn, herrings, guns, pistols, saddles, gloves, &c. Lon. $9^{\circ} 46' E$ lat. $50^{\circ} 50' N$.

Aar, large river in Switzerland, which rises in a lake near Mount Saalberg, in the S. of the canton of Bern, and running NW. through the whole extent of the lake of Brienz and Thun to Bern, takes a circuitous course to Soleure; whence it flows E. to Arburch, and NE. to Brugg; below which, being joined by the Reuss and Limmat, it falls into the Rhine opposite Waldschut.

Aarhuys, a large district of North Jutland, which extends from that of Wiburg to Cate-gat, about 15 ms. in length, and between 8 and 9 in breadth, and is uncommonly fruitful.

Aarhuus, or **Aarhusen**, the capital of the bishopric of that name, lies between the sea and a lake, from which water is conveyed by a pretty broad canal that divides the town into two unequal parts. It is large and populous; and has six gates, two principal churches, two market-places, a university, a free-school, and a well-endowed hospital.

Aaronsburg, village of Northumberland cty. Penn. containing about 40 dwellings. It is situated a little more than a m E. of Elk Creek, which unites with Penn's, and falls into the Susquehannah, 5 ms below Sunbury.

Aaronsburg, psto. Centre cty. Penn 15 ms. E. from Bellefonte, and 40 W. by N. from Sunbury.

Aarseo, or **Arzeo**, town of Algiers, near the mouth of the river Mina.

Abach, or **Welltenburg**, a market town in Lower Bavaria, on the Danube, 7 ms. from Ra-tisbon; and is noted for its mineral water.

B

which are celebrated for curing various diseases. Lon. $11^{\circ} 56'$ E. lat. $48^{\circ} 53'$ N.

Abadan, town at the mouth of the Tigris.

Abakanskoi, town of Siberia, in the province of Tobolsk, on the river Janeska, under the Russian government. It was founded in 1707, and rebuilt in 1726. Lon. $94^{\circ} 5'$ E. lat. $59^{\circ} 5'$ N.

Abalak, town in Siberia, 2 ms. from Tobolski. Lon. $68^{\circ} 20'$ E. lat. $58^{\circ} 11'$ N.

Abascia, or *Abcas*, a country in Asia, tributary to the Turks, bounded on the E. by Mingrelia on the N. and W. by Black Circassia, on the S. by the Black Sea.

Abassia, the modern name of a kingdom in Ethiopia Proper; it comprehends the provinces of Bag-meder, Gogom, Waleka, Shewa, &c. and is very mountainous; in some parts the rocks are so steep, that men and cattle are craned up by help of ropes and ladders, yet on the top of these there are woods, meadows, and fish-ponds.

Abberton, Eng. near Lexden, Essex. *Abberton*, near Parshore, 7 ms. from Worcester, noted for its mineral water.

Abdenhall, Eng. small village 12 ms. from Gloucester, 3 from Mewham, noted for a mineral spring, very efficacious in the cure of cutaneous eruptions.

Abberwick, Eng. large village near Alnwick, Northumberland.

Abbeville, a considerable town of France, in the department of Somme, and late province of Picardy, seated in a pleasant valley, where the river Somme divides into several branches, and separates the town into two parts. It is pretty well peopled: has a woollen manufactory, besides manufactories of sail-cloth. It lies 15 ms. E. from the British Channel, 20 NW. from Amiens, 52 S. of Calais, and 80 NW. of Paris. Lon. $1^{\circ} 55'$ E. lat. $50^{\circ} 7'$ N.

Abbeville, district of S. C. having Pendleton district NW., Laurens NE., Edgfield SE., and the Savannah river SW. It is about 31 ms. in length and breadth, having a superficies of about 1000 sqms. The surface is agreeably variegated with hill and dale, and a considerable part of the soil is rich and well watered. Cl. lat. $34^{\circ} 10'$ N. lon. W. C. $5^{\circ} 20'$ W. Pop. 1820, 22,189.

Abbeville C. H., Abbeville district, S. C. 118 ms. SE. from Columbia, and 625 ms. from Washington.

Abb's Head, St. Stld. a promontory, forming the southern extremity of the Frith of Forth, lying in the Parish of Coldingham and cty. of Berwick, about 10 ms. N. of Berwick, and the same distance S. from Dunbar. Lon. $1^{\circ} 56'$ W. lat. $55^{\circ} 54'$ N.

Abenrade, town of Denmark, in Sclswick, now very flourishing, being double the extent it was formerly, and built on a better site. It is seated on a spacious open bay in the Baltic, surrounded on three sides by high mountains, which render the harbour safe. Lon. $9^{\circ} 14'$ E. lat. $55^{\circ} 6'$ N.

Abensperg, or *Abensberg*, town of Bavaria, seated on the Abens, near the Danube, 15 ms. SW. of Ratisbon. Lon. $11^{\circ} 55'$ E. lat. $41^{\circ} 46'$ N.

Aberavon, borough town of Glamorganshire, Wales, on the mouth of the Avon, 19 ms. NW. of Cowbridge, and 195 W. from London. Lon. $3^{\circ} 48'$ W. lat. $51^{\circ} 35'$ N.

Aberbrothwick, or *Arbroath*, small neat town on the east coast of Angussire, Stld., 15 ms. NE. of St. Andrew's, and 40 NNE. from Edinburgh. It is situated on the mouth of the small river Brothick: is a royal burgh, well built, and flourishing. The number of its inhabitants has greatly increased within these last 40 years, and they are now estimated at about 7000. The chief manufactures are brown linens, or Osnaburghs, sail-cloths, and white and brown thread. There are about 34 vessels belonging to this place, each from 60 to 160 tons, employed in the Baltic trade. The foreign imports are flax, flax-seed, timber, iron, &c. Lon. $2^{\circ} 29'$ W. lat. $56^{\circ} 36'$ N.

Aberconway, town of Caernarvonshire, Wales, pleasantly situated on the river Conway. It has a good harbour, and formerly carried on a considerable trade in corn. Lon. $4^{\circ} 1'$ W. lat. $53^{\circ} 20'$ N.

Abercorn, village and parish of West Lothian, Stld., on the south bank of the Frith of Forth, 12 ms. W. from Edinburgh. The Roman wall is said to have begun in this parish.

Aberdeen, Old, formerly Aberdeen, is pleasantly situated on an eminence near the mouth of the river Don, and about 1 m. N. from New Aberdeen. The town consists chiefly of one long street. There is a neat town-house, a new building, and a Trades Hospital, for decayed freemen and their widows, and a hospital for 12 poor men, founded by Bishop William Dunbar. But the chief ornament of Old Aberdeen, is the large and stately fabric of King's College, situated on the S. side of the town. It is built round a square, with cloisters on the S. side. The structure contains a chapel, library, museum, common hall, and lecture rooms, with a long range of modern houses, for the accommodation of the professors and students. The library and museum are well furnished. Over

the Don at Old Aberdeen, there is a noble Gothic bridge, of one arch, 67 feet span, and 34½ high from the surface of the river. On both sides it rests on a solid ledge of rock. The population of Old Aberdeen and parish was 9911, in 1801.

Aberdeen New, is the capital of the shire of Aberdeen, Sstd. For extent, trade, and beauty, it far exceeds any town in the north of Scotland. It is built on a gentle eminence, rising from a small bay, formed by the river Dee, over which there is an elegant bridge of 7 arches, built by Bishop Denbar. The streets are numerous, spacious, and well paved; the houses are built of granite, (from adjoining quarries,) generally four stories high, remarkably neat and elegant, having almost universally gardens in their rear. The whole town is about 2 ms. in circumference, and the population is estimated at above 20,000. New Aberdeen is graced with an elegant college, founded by George Keith, the Earl Marischal of Scotland, in 1593. The trade is considerable, but might be greatly extended by an attention to the white fisheries. Aberdeen once enjoyed a good share of the tobacco trade: but of late years its chief imports were from the Baltic, and a few merchants trade to the West Indies, the Levant, and North America. Its exports are stockings, thread, salmon and oatmeal. The first is a most important article, being estimated at no less than 183,000*l.* annually; and employing in the spinning, knitting, &c. a very considerable portion of the inhabitants of the county. The thread manufacture is another considerable article, though trifling in comparison of the woollen. The salmon fisheries on the Dee, are a good branch of trade. About 46 boats, and 130 men, are employed on the first; and in some years, 167,000*lbs.* of fish have been sent pickled to London, and about 900 barrels of salted fish exported to France, Italy, &c. The inhabitants likewise export considerable quantities of pickled pork, which they formerly disposed of to the Dutch for victualling their East India ships and men of war; the Aberdeen pork has the reputation of being the best cured of any in Europe for keeping on long voyages. Fairs are on the 31st Jan. 3d Wednesday in June, and 13th July.

Aberdeenshire, a cty. of Sstd. bounded on the NW. by Banffshire, and the Deveron; on the N. and NE. by the German Ocean; on the S. by the counties of Kincardine, Angus, and Perth; and on the W. by Inverness-shire. Its length from NE. to SW. is about 10 ms.; its breadth not quite 30. It comprehends the districts of Mar, Garioch, Strathogie, and the greater part of Buchan. The soil of this extensive county is very various, and agriculture in general, rude. The high grounds present much excellent pasture, while great part of the lowlands yield very grateful returns to tillage. This county is noted for the thriving state of its manufactures of linen and woollen, in which it promises shortly to rival the superior region of the Clyde.

Aberdour, small town in Fifeshire, Sstd. with a good harbour, on the Frith of Forth, about 10 ms. NW. of Edinburgh.

Aberford, or *Aberforth*, small town of Eng. in

the west riding of Yorkshire, 15 ms. SW. of York, and 184 NNW. from London. It is noted for pin-making. Lon. 1° 21' W. lat. 53° 13' N.

Aberfraxe, village of North Wales, in the Isle of Anglesey, formerly a place of note, the Princes of North Wales having had a palace in it. In the neighbourhood, a considerable flannel manufactory is carried on. It lies 6 ms. NW. of Newburgh. Lon. 4° 36' W. lat. 53° 13' N.

Abergavenny, well built town in Monmouthshire, Eng. 16 ms. W. of Monmouth, and 142 W. by N. from London, containing about 500 houses. Lon. 3° 5' W. lat. 51° 50' N.

Abergeldy, village of N. Wales, in Denbighshire, 5 ms. W. by S. of St. Asaph, and 224 from London.

Abernethy, small town in Perthshire, Sstd. near the junction of the Erne with the Tay. The chief manufacture is that of household linen, and silasias for the market of Perth.

Aberystwith, town of S. Wales, in Cardiganshire, on the Ist with near its confluence with the Riddall, where they fall into the sea. It lies 203 miles WNW. from London, and 30 NE. from Cardigan. It was formerly fortified with a castle, and defended with walls; but both are now in ruins. It is, however, rich and populous, having a great trade in lead, a considerable fishing of herrings, cod, and whittings, and a good weekly market on Monday. In the bathing season, this town is a fashionable watering place. Lon. 4° 0' W. lat. 52° 23' N.

Abescombe, pstv. Gloucester cty. N. J.

Abex, country of Africa, on the Red Sea, which bounds it on the E.; on the W. it is bounded by Abyssinia and Nubia, on the N. by Egypt, and on the S. by the coast of Ajan. The chief towns are Arkeko, or Ercoco, and Suaquan; which last is the capital and the seat of a governor. It is subject to the Turks. It is 500 ms. in length, and 100 in breadth.

Abingdon, or *Abington*, Eng. a town of Berks on the Thames, 47 ms. E. of Gloucester; and 56 W. from London.

Abingdon, pst. and capital of Washington cty. Virg. near the E. side of the N. branch of Holstein river. Here is a jail, and a court-house, where the district and county courts are held. It is 300 ms. WSW. of Richmond, and 557 from Philadelphia. N. lat. 36° 51' W. lon. W. C. 5° 5'.

Abington, pstv. Plymouth cty. Mass. 18 ms. SE. from Boston, and 448 from W. C.

Abington Society, pstv. Windham cty. Conn. 37 ms. from Hartford, and 371 from W. C.

Abington, pst. Luzerne cty. Penn. 15 ms. NE. from Wilkes-Barre, and by pstrd. 145 NNE. from Harrisburg.

Abington, tp. Montgomery cty. Penn. 12 ms. N. from Philadelphia. Pop. 1453.

Abino Creek, U. C. in the cty. of Lincoln, emptying into Lake Erie, in the tp. of Bertie, at the head of the bay, E. of Point Abino.

Abino Point, in the tp. of Bertie, on Lake Erie, is 9 or 10 ms. SW. by W. from Buffalo.

Abnig, one of the Seven Nations in the countries comprehended between the Black Sea and the Caspian. Their principal and most ancient settlements, are on the southern slope

of the mountains lying between the river Cuban and the Black Sea. They are tributary to the Turks, and are divided into two governments, the Western and the Eastern, each subject to a Bashaw, commonly chosen from among the principal natives. One of these resides at Sochukkale, and the other at Soghumkale. The capital is Anacopir, formerly Nicopsis. The Abkhas speak an oriental language, essentially different from all other known languages, though appearing to have a very remote affinity to that of the Circassians.

Ablo, town of Little Tartary, lying between the river Dneiper and the Black Sea. Lon. $33^{\circ} 16'$ E. lat. $46^{\circ} 20'$ N.

Åbo, seaport, the capital of Finland, which lies upon the point where the gulfs of Bothnia, and Finland unite. It is a good port. It has a university, founded by Queen Christina in 1640, and endowed with the same privileges as that of Upsal; besides a school, founded by Gustavus Adolphus, for 300 scholars. The town is tolerably well built, and the inhabitants export linen, corn, and planks. Here the treaty of peace between Russia and Sweden, in 1743, was concluded. It lies 120 ms. NE. of Stockholm. Lon. $22^{\circ} 18'$ E. lat. $60^{\circ} 27'$ N.

Abourkir, small town of Egypt, lying in the desert between Alexandria and Rosetta. It is the ancient *Ganophys*, and is situated, according to Mr. Savary, 6 leagues from Pharos. The town is built on a rock, which forms a handsome road for shipping, and is out of the reach of inundations.

Abouige, town in Upper Egypt, near the Nile, where great quantities of poppies grow, of which the natives make the best opium in the Levant. Lon. $49^{\circ} 06'$ E. lat. $26^{\circ} 30'$ N.

Abrantes, town of Portugal, in Estremadura, seated on the Tago, and belonging to a marquis of that title. It is situated on a high ground, is surrounded with gardens and olive-trees, contains 45,000 inhabitants, and has 4 convents, a hospital, and an alms-house. Lon. $7^{\circ} 18'$ W. lat. $39^{\circ} 13'$ N.

Abruzzo, province of Naples, bounded on the E. by the Gulf of Venice, on the N. and W. by Ancona, Umbria, and the Campagna di Roma, and on the S. by the Terra di Lavoro and Molise. It is divided into two parts by the river Pescara, called Ulteriore and Citeriore. The former has Aquila, and the latter Solomona, for its capital. The country, though cold, is fertile in corn, rice, fruits, saffron, vines, and olives.

Abu, town in France, in the department of Aude, formerly the chief town of Vivares, and a bishop's see, now in a very ruinous state.

Abyo, or *Abyo*, one of the Philippine Islands in the East Indies, between Mindapao and Luzon. Here the Spaniards have a fort, and carry on a good trade with their American territories. Lon. $122^{\circ} 15'$ E. lat. $10^{\circ} 0'$ N.

Abyssinia, a kingdom of Africa, 800 ms. long, and 600 broad, bounded on the N. by Nubia, E. by the Red Sea and Dancalia, W. by Gorbama, and S. by Gingia and Alaba. It is one of the most mountainous and precipitous countries in the world; but in a few vales the soil is black and fertile. The rainy season continues from April to September. This is succeeded, with-

out interval, by a cloudless sky, and a vertical sun. Cold nights as instantly follow these scorching days. The earth, notwithstanding these days, is perpetually cold, so as to feel disagreeable to the soles of the feet. The low temperature of the air in Abyssinia, is doubtless the effect of elevation. According to Bruce, the region which he visited as that from which the Nile has its sources, is elevated more than a mile above Sennaar, and more than 2 ms. above the Red Sea. An elevation of 2 ms. is more than an equivalent for 25° of lat.; and would give a temperature to Upper Abyssinia, in N. lat. 10° , which would assimilate with that of the northern coast of Africa on the western Mediterranean, N. lat. 37° . Gondar is nominally the capital of Abyssinia, but in reality there is at present no town in that country worthy the title of capital. See *Africa* and *Nile*.

Acumbou, kingdom on the coast of Guinea in Africa, whose king is absolute, and one of the most powerful on the coast; his subjects though warlike and brave, are haughty, rapacious, and cruel.

Acapulco, a considerable town and port in Mexico, on the Pacific Ocean, 240 ms. a little S. of W. from Mexico, and by which a commercial communication is effected between western Mexico, and other parts of the world. The inland trade of Acapulco is chiefly performed by pack mules and horses. Acapulco itself is a small place, consisting of about 100 thatched houses, pop. 4000. The air here is hot, heavy, and unwholesome. Upon the arrival of the galleons, traders flock here from all the provinces of Mexico, to exchange European toys, their own cochineal, and about 4,37,500 sterling of silver, for spices, muslins, printed linens, silk, perfumes, and the gold works of Asia. Lon. W. C. $22^{\circ} 40'$ W. lat. $16^{\circ} 50'$ N.

Acheen, kingdom on the NW. part of the island of Sumatra, in the Indian Ocean. Though no longer the great mart of eastern commodities, it still carries on a considerable trade with the natives of that part of the coast of Hindoostan, called *Telinga*, who supply it with cotton goods of their country, and receive in return, gold dust, sapan wood, betel nut, patch leaf, (*colus Indicus*), a little pepper, sulphur, camphire, and benzoin. The country is supplied with Bengal opium, and also with iron, and many other articles of merchandise, by the European traders. Acheen is esteemed comparatively healthy, being more free from woods and swamps than most other portions of the island. In various respects the Acheenese excel the other inhabitants of Sumatra; they are taller, stouter, and better proportioned; more sagacious and cunning, more active and industrious, as well as better navigators.

Acheen, or *Achem*, the capital of the kingdom so called, lies 1000 ms. SE. of Madras, on a river which runs into the sea near the NW. point, or Acheen-head, about 2 ms. from the mouth, in a wild valley, formed by two lofty ranges of hills. A considerable fabric of a thick species of cotton cloth, and of stuff for the short drawers worn by Malays and Acheenese, is established here, and supplies an extensive demand. They weave also very handsome silk pieces, of a particular form for that part of the dress which is called by the Malays *cuyen farrang*. Lon. $95^{\circ} 34'$ E. lat. $5^{\circ} 22'$ N.

Acra, or *St. John d'Acra*, a seaport of Syria, in Palestine. It is called Ptolemais by the Greeks, and stands on a plain, at the north point of a bay, which extends in a semicircle of 9 ms. to the point of Mount Carmel, near the mouth of the Kardanah, or ancient Belus. In the time of the crusades, it underwent several sieges; and nothing is now to be seen of this ancient city, but the remains of monuments erected by the Christians, and some ruins of a church dedicated to St. Andrew. The new city is distant 1 m. from the ancient walls, and the fortifications are of little importance. The palace of the grand master of the order of St. John of Jerusalem is the residence of the chief of Acra. Here are three mosques, four churches, and a synagogue. The chief articles of commerce are corn and cotton. In 1759, great damage was done by an earthquake; and the year following 5000 persons, near one-third of the inhabitants, died by the plague. It is 24 ms. S. of Tyre, and 47 N. of Jerusalem. Lon. $35^{\circ} 20'$ E. lat. $32^{\circ} 32'$ N.

Adda, river of Switzerland, which rises in the Grisons, passes through the lake Como, the Vatteline, and the north part of the Milanese, falls into the Po, 5 ms. above Cremona.

Adel, kingdom of Africa, called also *Zeila*, from a rich trading town of that name, situated near its coast on the Red Sea. It seldom rains here, but the country is well watered by rivers, and abounds with wheat, millet, frankincense, and pepper. The inhabitants are Mohammedans. It was formerly a part of Abyssinia. The capital is Aucagurel.

Adelfors, town of Sweden, in Smoland, noted for its gold mines, 70 ms. NW. of Calmar.

Adenbeytan, province of Persia, bounded on the N. by Armenia, W. by Ghilan, S. by Irac Agemi, and W. by Curdistan. Tauris is the capital.

Adige, river of Lombardy, which rises S. of the Lake of Glace, and passing by Tyrol, Brixen, Trent, and Verona, falls into the gulf of Venice a little N. of the mouth of the Po.

Admiralty-Islands, a cluster of islands in the Pacific Ocean, to the NW. of New Ireland. They were discovered in 1767, and are between 20 and 30 in number; some of them appear of considerable extent, and the centre one is supposed to be in lon. $146^{\circ} 44' E$. lat. $15^{\circ} 37' N$.

Adon, town of Hungary, seated in a fruitful country near the Danube, 12 ms. S. of Buda.

Adour, river of France, which rises in the department of Upper Pyrenees, flows by Tarbes and Dax, and enters the bay of Biscay, below Bayonne. It is the SW. river of France of any note; the basin it drains is about 100 ms. long and 50 wide, though the stream is large for so confined an extent, as the principal sources are in the Pyrenees.

Adria, town of Italy, in Polesino di Rovigo, which gives name to the Adriatic sea, and was formerly of great note, but has been much reduced by frequent inundations. It is seated on the Tartaro, 35 ms. SSW. of Venice.

Adriano, mountain of Spain, in Biscay, over which is a very difficult road to Alba and Old Castle. It is one of the highest mountains of the Pyrenees, and is only inhabited by a few shepherds.

Adrianople, city of European Turkey, in Rumania, on the Marizza river, formerly the European seat of the Turkish dominion. It is 8

ms. in circumference; situate in a plain, on the river *Marissa*, which here receives two tributary streams. The commerce of the city by the river is considerable. The Turks took this city from the Greeks, in 1362. It is 112 ms. NW. of Constantinople. Lon. $26^{\circ} 27'$ E. lat. $41^{\circ} 55'$ N.

Adriatic Sea. See *Venice, Gulf of.*

Adventure Bay, at the SE. end of Van Diemen's land, so called from the ship in which Captain Furneaux sailed. Lon. $147^{\circ} 30'$ W. lat. $43^{\circ} 23'$ S.

Agades, or *Egates*, three small islands on the W. side of Sicily, between Marsella and Trapani; their names are *Levenzo*, *Pavignana*, and *Maefima*.

Etna, or *Etna*, a celebrated burning mountain of Sicily, now called by the natives *Monte Gibello*. It is situated in the eastern part of the island, in Lon. $15^{\circ} 0'$ E. lat. $38^{\circ} 0'$ N. Pindar, who lived 435 years before Christ, calls it the *Pillar of Heaven*, on account of its great height, which is generally reckoned to be about 11,000 feet; and its circumference, at the base, 70 ms. It affords an epitome of all the differences of climate. The summit is a league in circumference, and within formed like a vast amphitheatre, from whence flames, ashes, and smoke, issue in divers places. Eruptions of this mountain are mentioned by Diodorus Siculus, as happening 1693 years before Christ; and Thucydides speaks of three eruptions, which happened in 734, 477, and 425, B. C. From this period till 1447, there were about 18 different eruptions, the most destructive of which were in 1169 and 1329. There have been other eruptions since, which have done immense damage, particularly those in 1669, 1780, and 1787.

Afghanistan, country of Asia, stretching from the mountains of Tartary to the Arabian sea, and from the Indus to the confines of Persia. The inhabitants of this wide domain have no written character, and speak a language peculiar to themselves. They are a robust hardy race of men; and being generally addicted to a state of prebatory warfare, their manners partake of a barbarous insolence; they avow a fixed contempt for the occupations of civil life; and are esteemed the most negligent of religious observances of all the Mohammedans. Their common dress consists of a shirt, which falls over the upper part of long and narrow trousers; a woollen vest, fitted closely to the body, and reaching to the middle; and a high turned up cap, of broadcloth or cotton, usually of one colour, and of a conic form, with two small parallel slits in the upper edge of its facing. The principal cities of Afghanistan are Candahar and Cabul, the former of which was the capital; but the late and present sultans have kept their court at Cabul. The Afghans, in language and manners, have strong resemblance to the Jews. They are a bold, hardy, warlike, but ferocious race.

Africa, one of the four principal parts of the world; bounded on the N. by the Mediterranean sea, W. by the Atlantic ocean, S. by the Southern ocean, and E. by the isthmus of Suez, the Red Sea, and the Indian ocean. It is a peninsula of prodigious extent, being joined to Asia by the isthmus of Suez, which is 40 ms. over. In its greatest length, from the most northern

part to the Cape of Good Hope, it is 4600 ms.; and in the broadest part, from Cape Verd to Cape Guamelui, it is 3500. The greatest part of it is within the torrid zone, which renders the heat almost insupportable in many places. However, the coasts in general are very fertile, the fruits excellent, and the plants extraordinary. There are more wild beasts here than in any other part of the world; there are also some animals peculiar to this country; as the hippopotamus, or river horse; the rhinoceros, with two horns on its nose; and the beautiful striped zebra. Besides these, there are crocodiles, ostriches, camels, and many other animals not to be met with in Europe. There are several deserts, particularly one of a large extent, called Zahara; but these are not quite without inhabitants. There are many large rivers; but the principal are the Nile, Niger, Zaïre, Senegal, and Gambia. The most considerable mountains are the Atlas, the Mountains of the Moon, and the Sierra Leone. The inhabitants consist of pagans, Mohammedans, and Christians. In the central parts, on the S. appear to be the native regions of the negroes, whose colour, features, and hair, distinguish them from all other races of mankind. In the seventh century, the Mohammedan Arabs subdued the N. of Africa, and their descendants, under the name of Moors, constitute a great part of the present population. The principal divisions of Africa are Barbary, Egypt, Biledulgerid, Zahara, Negroland, Guinea, Bornou, Cashra, Fezzan, Senegal, Nubia, Abyssinia, Abex, Loango, Congo, Angola, Benguela, Matama, Zanguebar, Monomotapa, Monomugi, Sofola, Caffraria, and the country of the Hottentots. The area of Africa has been very variously stated, though from its form and position the most facile to correct admeasurement of any of the large sections of the terrequeous earth. It lies between N. lat. 37° and S. lat. 35° , and extends from 12° W. to 52° E. from the meridian of London. The area exceeds 11,000,000 sqms. This immense surface, if taken as a whole, is the least habitable part of this planet. A strip along the southern side of the western Mediterranean is arable; as is the basin of the Nile, the central parts near the equator, as far as known, a strip along the Indian ocean, and comparatively a small section towards the southern extremity. The residue is composed of sand and rock, dreary wastes, devoid of water, or animal or vegetable life. More than one-tenth part of the land surface of the earth may be deducted for the deserts of Africa. See *Nile*, *Niger*, &c.

Africa, seaport town of Tunis, 70 ms. SSE. of Tunis. It was taken by Charles V. who demolished the fortifications. Lon. $11^{\circ} 10'$ E. lat. $35^{\circ} 36'$ N.

Agen, city of France, in the late province of Guienne, the episcopal see of the department of *Avieron*. It is seated on the *Garonne*, in a pleasant country. Prunes, on account of their antiscorbutic property, form here a considerable object of commerce; of which the Dutch take great quantities for long voyages. Great part of the hemp in the neighbourhood is manufactured into table linen, which is sent to Cadiz, and thence exported to the Spanish islands. Here are likewise manufactures of cambrils, serges, and sailcloth. *Agen* is 108 ms. SE. of *Bordeaux*. Lon. $0^{\circ} 40'$ E. lat. $42^{\circ} 12'$ N.

Agenabus, town of Transylvania, 10 ms. NE. of *Hermenstadt*. Lon. $24^{\circ} 50'$ E. lat. $46^{\circ} 32'$ N.

Agmondesham. See *Amerham*.

Agnodelloa, vil. of the Milanese, on the canal between *Adda* and *Serio*; 3 ms. SE. of *Cassana*, and 10 N. of *Lodi*. Lon. $9^{\circ} 26'$ E. lat. $45^{\circ} 25'$ N.

Agnano, circular lake in the kingdom of Naples, 7 ms. from *Pizzoli*. It is about $\frac{1}{2}$ m. in diameter, surrounded by mountains, and on its margin is the famous *Grotto del Canale*. See *Grotta del Canale*.

Agosta, seaport town of Sicily, with an excellent harbour. The greatest part of it was destroyed by an earthquake in 1693. Lon. $15^{\circ} 15'$ E. lat. $37^{\circ} 35'$ N.

Agua, capital of a province of the same name,

in Hindoostan Proper, on the S. bank of the river *Jumna*, which is seldom fordable. It was once the most splendid of all the Indian cities, and now exhibits the most magnificent ruins. About the year 1566, the emperor *Acbar* made it his capital, and gave his name to it; since which time it is often named *Acbarabad*. It was then a small fortified town; but it soon sprung up an extensive well-built city, regularly fortified according to the Indian method, and with a fine citadel of red free-stone. *Agra* is 100 ms. Alaba, or *Alava*, one of the three smallest districts of Biscay, in Spain, but pretty fertile in rye, barley, and fruits. There are in it very good mines of iron. Vitoria is the capital.

Alabama, one of the United States, having Tennessee N., Georgia E., Florida and the gulf of Mexico S., and the Mississippi W. This state extends from N. lat. $30^{\circ} 12'$ to N. lat. 35° , or 334 ms., with a mean width of 155 ms.; extending over 51,770 sqns. 33,132,800 acres. The face of Alabama is much variegated, the soil also differs in quality from the worst to the best. That section of the state which lies along the gulf of Mexico, is low and sandy, but this character of country rapidly changes; within 10 or 12 ms. from the coast, the hills commence, and gradually gain elevation advancing N. The bay of Mobile penetrates this section 30 ms. and is followed by an overflowed tract, which extends again 32 ms. to the junction of the Alabama and Tombigbee rivers. Between the head of Mobile bay, and the union of the two latter streams, a number of channels wind through the alluvial tract, the principal of which, are those of the Mobile and Tensaw. The bay and the alluvial bottoms above are limited on each side by hills of moderate elevation covered with pine timber. The pine region extends into the centre of the state, and forms much the largest portion of its soil. The Tombigbee, Blackwater, Catawba, Coosa, Tallapoosa, Alabama, and some minor streams penetrate the pine section of Alabama. Extensive bodies of river alluvion skirt those rivers, and much interval land of second rate quality, spread between the river bottoms and the open pine woods; but

the far greater share of the central parts of the state is barren. The foregoing character continues to the sources of the waters flowing towards the gulf of Mexico. Tennessee river enters the state at the NE corner, and leaves it at that of the NW. sweeping by an elliptical curve to the S. as far as N. lat. $34^{\circ} 17'$. The northern extremity of the state is the most fertile and valuable of its natural sections. The spurs of the Appalachian ridges extend into, and cross Alabama obliquely, rendering its central and northern extremity much broken; the rivers wind in deep valleys. The climate and seasons partake of the extended variety of latitude and natural physiognomy. Stretching through near 5 degrees, and differing so much in relative elevation, the temperature and vegetable production exhibit a very rich variety.

It is productive in maize in all parts of the state; and small grain, in the hilly and northern sections. Cotton is, however, the staple commodity, cultivated for export, though some tobacco is also raised for market in small quantities. A very great variety of fruit trees and garden vegetables are cultivated; the principal fruits are apples, peaches, pears, plums, and, towards the gulf of Mexico, the pomegranate, and fig. By the census of 1820, Alabama contained the following counties, with the pop. annexed to each. Those marked * have been formed since the publication of the first edition of this dictionary.

The foregoing was the pop. of Alabama 1820, from the marshal's return; but, by subsequent information laid before the Congress of the United States, it appeared that the enumeration was too small by more than 16,000 persons; and, consequently, the state contained above 143,000 inhabitants. Of these, about 35,000 were engaged in agriculture, in commerce 500, and in manufactures 8000. Tuscaloosa is now the seat of government.

I have no document to fix the pop. of this state at the close of 1825, but suppose it cannot fall short of 200,000.

Alabama, river in Alabama, is formed by the united streams of Coosa, and Tallapoosa. The general course of this river is from NE. to SW. and, following the windings, of near 300 ms. in length; it receives only one considerable branch, the Cahaba from the N. and uniting with the Tombigbee at N. lat. $31^{\circ} 06'$, forms the Mobile, about 35 ms. above the head of Mobile bay. The banks of the Alabama are in general extremely fertile. Cotton and tobacco chief staples. It is navigable, by schooners drawing 5 feet water, to the first rapid near Fort Claiborne, and for boats, of considerable tonnage, to the head, at the mouth of Coosa, and Tallapoosa.

Alderbury, village in Wiltshire, Eng., on a healthy hill, 2 ms. from Salisbury, near the Avon, and to the Avon and Salisbury canal, 77 ms. from London. It carries on a manufacture of fustians, and received considerable damage by a fire in 1777, when 200 houses were destroyed.

Alderney, island in the English Channel, 18 ms. NE. from Guernsey. It is 8 ms. in compass, separated from the coast of Normandy, by a strait called the Race of Alderney, which is a very dangerous passage, on account of the rocks under water. It is a healthful island, and fruitful in corn and pasture; but has only one church, in a town of the same name. Lon. 2° 7' W. lat. 49° 45' N.

Alderette, small town of Portugal, in Alentejo, on the river Gaiá, which falls into the Guadiana, a little below Badajoz. It is 7 ms. SE. of Portalegre. Lon. 7° 25' W. lat. 39° 2' N.

Alempignon Lake, lies to the northward of Lake Superior, and is about the size of Lake Nipissing.

Alentejo, fertile province of Portugal, between the Tajo and the Guadiana. The inhabitants are very industrious.

Alençon, large handsome town of France, in the department of Orne, and late province of Normandy. Near it are stone quarries, fit for building, wherein is found a sort of crystal like Bristol stones. It is seated in an open country, abounding in all sorts of corn and fruits, on the river Sart, 20 ms. N. of Mans, and 97 SW. of Paris. Lon. 0° 10' E. lat. 48° 18' N.

Alentejo, large province of Portugal, having Algarve S., Spanish Estramadura E., the river Tagus N., and Atlantic Ocean W. Chief towns, Evora, Beja, Eboas, and Villa Viciosa.

Aleppo, capital of Syria, inhabited by Turks, and different denominations of Christians, who have each a bishop and a church, and the free exercise of their religion. The city and suburbs contain 235,000 persons. Next to Constantinople and Cairo, it is the most considerable city in the Turkish Empire. It is situated in the vast plain which extends from the Orontes to the Euphrates, and which, towards the S. terminates in the desert. It is built on 8 hills, on the highest of which the castle is erected, and is supposed to be the castle of Bera. The houses are large and commodious, having terraces on their tops, and generally sky-lights in form of a dome, to let the light into the rooms, which from their loftiness, the gilding on the

window-shutters, clipboards, &c. have at first entrance a very agreeable effect. The streets are carefully paved, have gutters and a foot pavement on each side, and the middle of the street is laid with bricks, the small end upwards, for the convenience of horses. There is also a cleanliness observed here, unknown to the other cities of Turkey, there being ass drivers who go about the city and take up the rubbish and dust, which each inhabitant is obliged to sweep together. The mosques are numerous, and some of them magnificent. Before each of them is an area, with a fountain in the middle, designed for ablutions before prayers. The bazars or market-places, are long covered narrow streets, on each side of which are a great number of small shops, just sufficient to hold the tradesman and his goods, the buyer being obliged to stand without. The situation of Aleppo, besides the advantage of a rich and fruitful soil, possesses also that of a stream of fresh water, which never becomes dry. Near Aleppo, its banks are covered with a fertile earth, and laid out in gardens, or rather orchards, which in a hot country, and especially in Turkey, cannot but be delightful. The city is itself one of the most agreeable in Syria. On whatever side it is approached, its numerous minarets and domes, present an agreeable prospect to the eye, fatigued with the continued sameness of the brown and parched plains. Aleppo is the emporium of Armenia and the Diarbekar; sends caravans to Bagdad and into Persia; and communicates with the Persian Gulf and India by Bassora, with Egypt and Mecca by Damascus, and with Europe and Alexandria and Latakia. Their chief commodities are raw or spun cottons, clumsy linens fabricated in the villages, silk stuffs manufactured in the city, copper, coarse cloths, goats' hair, the gall-nuts of the Kourdestan, the merchandise of India, such as shawls and muslins. Eighteen miles SE. of Aleppo, is a large plain called the Valley of Salt, bounded by low rocky hills, which form a kind of natural basin that retains the rain descending from the rocks, together with the water rising from a few springs, and cause the whole to be overflowed in winter. The extent of the surface prevents this water from being of any great depth; so that it is soon evaporated by the sun, when it leaves a cake of salt, in some places half an inch thick; and in April, people are employed to gather this salt, which is sufficient to supply all this part of the country. Aleppo is seated on a small brook, 70 ms. E. of Alexandretta, and 170 N. by E. of Damascus. Lon. 37° 20' E. lat. 35° 45' N.

Alessano, town of Naples, in the province of Otranto, with a bishop's see, 15 ms. SW. of Otranto. Lon. 18° 25' E. lat. 40° 10' N.

Alexander, tp. Athens city, Ohio. Pop. 1820, 637.

Alexander, city, Ill., at the confluence of the Ohio and Mississippi. The features of this city are varied; those parts extending along the rivers, are low, flat, and to a considerable extent, annually inundated, in the interior rise hills of considerable elevation. The soil is in general fertile. Some cotton has been cultivated, but the climate is rather too cold for the growth of that vegetable. Maize, wheat, rye, oats, &c. are produced in abundance, as are garden vegetables, and fruit trees, such as apples, peaches, pears, and plums. Co. lat. 37° 10' N. W. lon. W. C. 12° 2'. Pop. 1820, 1312.

Alexander, pto. Athens city, Ohio, 60 ms. SE. from Columbus.

Alexander's Mills, pto. Fleming city, Kent, 63 ms. from Frankfort.

Alexandretta, or *Scanderoon*, town of Syria, in Asia, at the extremity of the Mediterranean Sea, and the seaport of Aleppo, from which it is distant 28 or 30 leagues. It is now, properly speaking, nothing else but a village without walls, in which the tombs are more numerous than the houses, and which entirely owes its existence to the road which it commands. This is the only road of all Syria, where vessels anchor on a solid bottom, without their cables being liable to chafe; but in other respects it has many inconveniences. It is infested during winter, by a peculiar wind, which, rushing from the snowy summits, frequently forces ships to drag their anchors several leagues. But the worst circumstance, is the extreme unwholesomeness of the air. It may be affirmed that this, every year, carries off one third of the crews of the vessels which remain here during the summer, nay, ships frequently lose all their men in two months. To this baneful epidemic, Alexandretta, from its situation, seems to be irremediably condemned; for the plain on which the town is built is so low and flat, that the rivulets, finding no declivity, can never reach the sea. On this account, while the heats are excessive, the principal inhabitants retire to the neighbouring villages, among the mountains, where there is excellent water and delicious fruits. It is 70 ms. W. of Aleppo, lon. 36° 23' E. lat. 36° 35' N.

Alexandria, city and port of entry in the D. C., on the S. bank of the river Potomac, about 180 ms. from the ocean. It is the capital of a county of the same name, and carries on a considerable trade, particularly in flour. It has some public buildings, such as an episcopal church, bank, academy, court-house, &c. The original settlers laid out the streets on the plan of Philadelphia. Nine ms. below the town, on the Virg. bank of Potomac, where it is nearly 2 ms. wide, is Mount Vernon, the celebrated seat of General Washington. Alexandria is 10 ms. S. from Washington, and 100 ms. N. of Richmond, N. lat. 38° 46' lon. W. W. C. 0° 3'.

Alexandria, town of Ohio, in Sciota city, at the mouth of the Sciota river.

Alexandria, pst. and seat of justice for the parish of Rapides, Lou., situated upon the right bank of Red River, immediately below the Rapids. It is about 350 ms. above New Orleans by water, and 65 below Natchitoches. Number of inhabitants about 600. N. lat. 31° 18' W. lon. W. C. 15° 39'.

Alexandria, or *Scandaria*, an ancient and once rich and famous town of Egypt, now much decayed, though there are still some remains of its ancient splendour. This city was built by Alexander the Great, about 333 years before Christ, and was a league and a half long, by one third in breadth, which made the circumference of its walls about 4 leagues. Lake Mareotis bathed its walls on the S., and the Mediterranean on the N. It was intersected lengthwise by strait parallel streets. This direction left a free passage to the northerly wind, which alone conveys coolness and salubrity into Egypt. A street of 2000 feet wide began at the gate of the sea, and terminated at the gate of Canopus. This street, the handsomest in the

universe, was intersected by another of the same breadth, which formed a square at their junction, of half a league in circumference. At present the city of Alexandria is reckoned to have about 14,000 or 15,000 inhabitants; a strange colluvies of different nations, as well as from various parts of the Turkish Empire. The present condition of Alexandria is very despicable, being now so far ruined, that the rubbish in many places overtops the houses. The famous tower of Pharos, has long since been demolished, and a castle called *Fortillon*, built in its place. Some parts of the old walls of the city are yet standing, and present us with a master-piece of ancient masonry. But what most engages the attention of travellers is the Pillar of Pompey, as it is commonly called, situated at a quarter of a league from the southern gate. It is composed of red granite. The capital is Corinthian with palm leaves, and not indented: it is 9 feet high. The shaft and the upper member of the base are of one piece of 90 feet long, and 9 in diameter. The base is a square of about 15 feet on each side. This block of marble 60 feet in circumference, rests on two layers of stone bound together with lead. Nothing can equal the majesty of this monument, seen from a distance, it overtops the town, and serves as a signal for vessels. Approaching it nearer, it produces an astonishment mixed with awe. One can never be tired, with admiring the beauty of the capital, the length of the shaft, nor the extraordinary simplicity of the pedestal. It was formerly a place of great trade, all the treasures of the East Indies being deposited there: but since the discovery of the Cape of Good Hope, this trade is in a great measure lost. This place is subject to the Grand Signior, who, however, has but a limited authority. It is seated on the most westerly branch of the river Nile, 125 ms. NW. of Cairo. It was taken by the French under Bonaparte, in their expedition to Egypt, but they have been forced to abandon it. Lon. $31^{\circ} 11' E.$ lat. $30^{\circ} 21' N.$

Alfeo, anciently *Alpheus*, river of Greece, in the Morea. This stream is large when compared with the country in which it flows; rises above the ruins of Megalopolis, near where Tripolizza now stands, and flowing NW. about 40 ms. along the Lefthas mountains, receives many accessory streams from the NE. Suddenly winding to the W. and piercing the mountains,

quits the valley of Arcadia, and traversing Elis 15 ms., falls into the Ionian Sea opposite the ancient Strophades, N. lat. $37^{\circ} 40'.$ The Alpheus might be strictly called the river of Arcadia, as it drains that mountain enclosed valley, in all its extent. See *Morea*.

Algezira, strong town of Spain, in Andalusia, on the straits of Gibraltar; but at present in a mean condition, the harbour being decayed. It is 10 ms. NW. of Gibraltar. Lon. $5^{\circ} 22' W.$ lat. $36^{\circ} 14' N.$

Algher, or *Alcori*, town of Sardinia, on the NW. coast, with a bishop's see. Lon. $8^{\circ} 40' E.$ lat. $40^{\circ} 40' N.$

Algiers, one of the states of Barbary, bounded on the E. by Tunis, on the N. by the Mediterranean, on the S. by Mount Atlas, and on the W. by Morocco. It extends 600 ms. from E. to W. The air is very temperate, and the land toward the N. fertile in corn. The valleys are full of fruit, but a great part is dry, mountainous, and barren. The melons have an exquisite taste, some of which are ripe in summer, and others in winter. The stems of the vines are so large, that a man can hardly grasp them with his arms; and the bunches of grapes are a foot and a half long. It is divided into three provinces, namely, Tlemsan on the W., Titerie on the S., and Constantia to the E. of the city of Algiers. The Turks, who have the government in their hands, are not above 7000 in number; and yet the Moors, or natives of Africa, have no share in it. It is only a kind of republic under the protection of the grand signior, and it is governed by a sovereign called the dey, but he can do nothing of consequence without the council of the Janissaries. The Arabs who live in tents, are a distinct people, governed by their own laws and magistrates, though the Turks interpose as often as they please. The dey of Algiers is an absolute mo-

narch, but elected by the Turkish soldiers, and frequently deposed, and put to death, by them. The revenues of the government arise from the tribute paid by the Moors and Arabs, a detachment of the army being sent into each province every year to collect it; and the prizes they take at sea sometimes equal the taxes they lay upon the natives. The dey has several thousand Moors in his service, both on horse and foot; and the deys or viceroys of the provinces have each an army under his command. Their religion is Mohammedanism, and their language a dialect of the Arabic. They have likewise a sergon, composed of Italian, French, and Spanish, called *Lingua Franca*, that is understood by the common people and merchants. The complexion of the natives is tawny, and they are strong and well made.

Algiers, large and strong town of Africa, in Barbary, the capital of the kingdom of Algiers. It is built on the declivity of a mountain, and is in the form of an amphitheatre. Next the harbour, inasmuch, that the houses appearing one above another, make a very high appearance from the sea. The tops of the houses are all flat, for which reason they walk upon them in the evening to take the air; besides, they are covered with earth, and serve for a sort of gardens. The streets are narrow, and serve to keep off the extreme heat of the sun. The mole of the harbour is 500 paces in length, extending from the continent to a small island, where there is a castle and a large battery of guns. The number of inhabitants is said to be 100,000 Mohammedans, 15,000 Jews, and 4000 Christian slaves. Their chief subsistence is derived from their piracies, for they make prizes of all Christian ships that are not at peace with them. The country about Algiers is adorned with gardens and fine villas, watered by fountains and rivulets; and thither the inhabitants resort in the hot seasons. Algiers, though it has, for ages, braved the resentment of the most powerful states in Christendom, it is said, could make but a weak defence against a regular siege. Algiers is situate opposite Minorca, 180 ms. W. of Tunis. Lon. $2^{\circ} 15' E.$ lat. $34^{\circ} 9' N.$

Algonquins, nations of Indians W. and NW. from lake Superior, and around the heads of the Mississippi, Winnipeg, and Assiniboin rivers.

Alhama, town of Spain, in Granada. A little above it are hot baths, accounted the best in Spain. It is seated on a valley, surrounded by raggy mountains, 25 ms. SW. of Granada. Lon. $24^{\circ} W.$ lat. $36^{\circ} 56' N.$

Alhambra. See *Granada*, the city.

Ajubarota, town of Portugal, in Estremadura, 10 ms. S. from Leiria, famous for a battle between the Castilians and Portuguese, August 14th, 1384, in which the former was defeated.

Alicant, seaport of Spain, in Valencia, remarkable for its excellent wine, and the fertility of its soil, which produces excellent fruits, and plenty of rosemary of an extraordinary size. It is seated on the Mediterranean, on a bay of the same name, 85 ms. S. of Valencia. Lon. $0^{\circ} W.$ lat. $38^{\circ} 30' N.$

Alentejo, town of Sicily, remarkable for corn and wine. It is seated on a peninsula,

22 ms. SE. of Gergenti. Lon. $13^{\circ} 48' E.$ lat. $37^{\circ} 11' N.$

Allahabad, city of Oude, in Hindoostan proper, seated at the confluence of the two great rivers, the Ganges and Yamna. It was founded by the emperor Akbar, who intended it as a place of arms; but its fortifications will hardly resist the battering of a field-piece. It is 470 ms. NW. of Calcutta. Lon. $82^{\circ} 0' E.$ lat. $24^{\circ} 45' N.$

Alburg. See *Alburg*.

Allchurch, vil. of Worcestershire, Eng. It has a almshouse founded in 1580, and the Roman town street passes through it. The bishop of Worcester had formerly a palace here, and the church, several parts of which are of Saxon architecture, contains many antique monuments. It is 5 ms. E. by N. of Bromsgrave.

Alleghany, or *Appalachian Mountains*, a long range of mountains in N. America, between the Atlantic, the Mississippi, and the lakes; extending nearly parallel with the sea coast, 900 ms. in length, and from 60 to 200 in breadth. The different ridges which compose this immense range have different names in the different states. Advancing from the Atlantic, the first ridge of Pennsylvania, Virginia, and N. Carolina, is the Blue Ridge, or S. Mountain, from 130 to 260 ms. from the sea, and about 1200 feet mean elevation from its base. Between this and the N. Mountain, spreads a large fertile vale. Next lies the *Alleghany*, which is the principal ridge, and has been descriptively called the *back bone* of the U. S. Beyond this is the long ridge called the Laurel Mountains. From these several ridges proceed innumerable nameless branches or spurs. The Kittatiny, or Blue Mountains, run through the northern parts of New Jersey and Pennsylvania. These mountains are not, in general, confusedly scattered and broken, rising here and there into high peaks overtopping each other, but stretch along in uniform ridges, scarcely 3 m. high. They spread as they proceed S. and some of them terminate in high perpendicular bluffs. Others gradually subside into a level country, giving rise to the rivers which run southerly into the gulf of Mexico. In the back parts of Pennsylvania, scarcely one acre in ten of this range is capable of culture; but this is not the case in all parts; for numerous tracts of fine arable and pasture land intervene between the ridges, having generally a rich black soil. Indeed, some of the mountains will admit of cultivation almost to their tops.

Alleghany River, is an important stream in the western part of Pennsylvania. The head waters have their rise in the N. part of Pennsylvania near New-York state and nearly in an E. and W. centre of the state. Winding a NW. direction it passes into New-York, and then taking a SW. and S. course through a fertile part of Pennsylvania, joins with the Monongahela at Pittsburg, and forming the Ohio river. A very slight inspection of the map of Pennsylvania will convince a person that this river will, at some future day, perhaps not very distant, be one of the great channels of communication between the western and eastern waters of the U. S. At present the transportation is

considerable on one of its small branches. Frenchcreek is the only stream of consequence which the Alleghany receives from the westward. The creek has its source near Lake Erie, from which to Waterford, the commencing point of navigation, there is a portage over a turnpike of 14 ms. Upwards of 70,000 bushels of salt from the Onondaga works in New York, were entered in one year at Erie, a considerable portion of which descended Frenchcreek and the Alleghany for the supply of the different Ohio river towns. It is the eastern branches of the Alleghany which, interlocking with the navigable branches of the Susquehanna, make this river of great importance to the state of Pennsylvania. Of these branches, Toby's creek, from the NW., and Kiskiminetas river, from the SW., are the most conspicuous. The navigable branches of the former approach the navigable waters of the W. branch of the Susquehanna within 20 ms., while the navigable head waters of the former may be connected with the navigable waters of Juniata by a portage of 25 ms. This nature has left comparatively but little for the exertions of man to form a complete water communication between New York and Philadelphia and the Ohio waters, giving the industrious planter and merchant a choice of a market, either in the gulf of Mexico, or in the metropolis of their own state, one at a distance of 2000 ms., the other not more than 300 from his own door.

• *Alleghany, city*, of N. Y. having Penn. S. Cataragus W., Niagara N.W., Genesee and Ontario N. and Steuben E. It is 52 ms. long from N. to S. and 30 ms wide from E. to W. and covering an area of 1560 sqms. The face of the country is hilly, and even mountainous, though containing much fertile land. Chief town Angelica. Cit. lat. 42° 20' N. lon. W. C. 1° W. Pop. 9330, in 1820.

• *Alleghany, city*, of Penn. having Washington SW., Beaver NW., Butler N. and Westmoreland E. It is 52 ms. long, with a mean width of about 18, extending over an area of 365 sqms. It is finely intersected by the Alleghany, Monongahela, and Ohio rivers; the surface is hilly, but the soil of the river and cross bottoms, and, indeed, most of the hill sides, are superabundantly fertile. Chief town the city of Pittsburgh. N. lat. 40° 30', and lon. 80° W. of W. C. intersect near the centre of this city. Pop. 1820, 34921.

Alps, the highest mountains in Europe, separating Italy from France and Germany. They begin on the side of France towards the Mediterranean, between the territory of Genoa and country of Nice; and terminate at the Gulf of Carmiro, which is part of the Gulf of Venice. They consist of lofty chains of mountains, ranging one upon another, with only narrow valleys between. They are composed of stupendous rocky masses, 2, 3, and even 6 being piled upon each other, and from 4000 to 15600 feet high. There are few passes over them, and those of difficult access. Switzerland takes up a good part of these mountains, or rather the valleys between them.

Amazon or *Orellana*, a great river of S. America, which has its source in Peru, not far from the Pacific Ocean, and running E. falls into the Atlantic Ocean by a number of channels, which in the rainy season overflow their banks, and fertilize the country. Its course is between 4 and 5000 miles, including all its windings. The country included within its various mouths, is 150 ms. broad, and it receives in its progress, near 200 other rivers, many of which have a course of 5 or 600 leagues. The principal of these tributary streams, are the Napo, Japura and Negro, from the N.; the Tocantinas, Xingua, Tapajos, Madeira, Purus, Intay, Grand Para, Gualaga, and Lauricocha, from the S. The Amazon, including all its confluent and their tributaries, drains an area of more than 2,800,000 sqms. It enters the Atlantic Ocean under the Equator, Lon. E. W. C. 28° . Very erroneous opinions prevail in the U. S. respecting the relative extent of the basins of the Mississippi and Amazon, and also, upon the comparative length of the 2 streams. Measured by steps of 100 ms. along its valley, the Mississippi, by either the Missouri or Yellow Stone rivers, is about 2500 ms. in length. The Amazon by the Madeira, is 2300 ms., by the Tunguragna 2600, and by the Grand Para 2900 ms., measured also by comparative scale. In respect to the area drained, the rank of the Amazon is still more imposing. The Mississippi basin stretches from the sources of the French Broad, to those of Maria's river, 1700 ms., with a mean width of 800 ms.; superficies, about 1,300,000 sqms. The basin of the Amazon, from the head of the island of Ioanna, to the sources of the Lauricocha, is about 2100; the mean width exceeding 1400 ms. Consequently, this immense basin extends to near 3,000,000 sqms. See *Rivers*.

Amazonia, a country in S. America, bounded on the N. by Terra Firma and Guiana, on the E. by the Atlantic Ocean and Brazil, on the S. by the Plata, and on the W. by Peru. It is indeed a vague term to designate all the interior of S. America watered by the Amazon, and yet inhabited only by the native

tribes of savages. It was discovered in 1540, by Francisco Orellana, who sailed down the river Amazon to the Atlantic. Observing companies of women in arms on its banks, he called the country Amazonia, and gave the name of Amazon to the river. But this was probably a fiction, for M. Condamine could perceive no such women. It is generally a flat region, abounding in woods, lakes, rivers, bogs, and morasses. The soil is very rich and fertile; the trees and plants are verdant all the year. The rivers and lakes are infested by alligators and water-serpents. Their banks are inhabited by different tribes of Indians, governed by petty sovereigns. The Spaniards have made many vain attempts to settle this country. On that part of the coast between Cape North and the mouth of the Amazon, and along that river, the Portuguese have indeed some settlements.

Amelabad, a large and populous city of Hindoostan, and the capital of the province of Guzerat. It is one of the best fortified places in India, but was taken by general Goddard, in 1780, from the Poonah Mahrattas, to whom it was restored in 1785. It stands in a beautiful plain on the banks of a navigable river that falls into the Gulf of Cambay, 321 ms. N. of Bombay. Lon. $72^{\circ} 37'$ E. lat. $22^{\circ} 58'$ N.

Amednagar, city of Hindoostan in the Deccan; once the capital of the Soubah of the same name, which now is better known by that of Dowlatabad. This city was the residence of the emperor Aurungzebe, during his conquest of the Deccan, and the Carnatic. It is 181 ms. by Poonah from Bombay. Lon. $75^{\circ} 0'$ E. lat. $19^{\circ} 10'$ N.

Amelia, an episcopal city of Italy, in the State of the Church, in the Duchy of Spoleto, 20 ms. SW. of Spoleto, and 45 N. of Rome. Lon. $12^{\circ} 30'$ E. lat. $41^{\circ} 33'$ N.

Amelia, city, Virg., lying between the waters of the Nottoway and Appomatox rivers. Having Nottoway SW., Prince Edward W., Cumberland NW., Pohatan and Chesterfield NE., and Dinwiddie SE. It is about 30 ms. long, with a mean width of 10, embracing an area of 300 sqms. The face of this city is agreeably diversified, and soil tolerably fertile. Ctl. lat. $37^{\circ} 15'$ N. lon. W. C. $1^{\circ} 0'$ W. Pop. 1820, 11,106.

Amelia, C. H. and psto. Amelia city, Virg. 58 ms. SW. from Richmond, and 185 from W. C.

Amelia Springs, psto. Amelia city, Virg. 61 ms. SW. from Richmond, and 184 from W. C.

Amelia Island, in the Atlantic Ocean, coast of East Florida, S. from Cumberland island. Lat. $30^{\circ} 35'$ N.; extending 13 ms. from the mouth of Nassau to St. Mary's rivers, with a mean width exceeding a mile.

Ameliasburg, tp. in the city of Prince Edward, U. C., is the westernmost tp. of that city, bounded by the carrying place, which leads from the head of the bay of Quinte to Lake Ontario, and is washed by the waters of the bay and the lake.

Amentia Union Society, psto. eastern part of Dutchess city, N. Y., 25 ms. NW. from Poughkeepsie. Pop. 1820, 3,114.

America, continent of, one of the great subdivisions of the terraqueous globe. Taken in its fullest extent, America extends from S. lat. 56° , to the utmost known land towards the N. pole. It is washed on the E. by the Atlantic Ocean, which separates it from Africa and Europe; by the Pacific Ocean W. separating it from Asia, Australasia, and Polynesia; and on the N. by the Frozen Ocean, and the various inlets separating the numerous islands of that inhospitable region. America is naturally divided into two immense sections, which have received the relative adjective names of North America, and South America. North America

extends from the Isthmus of Darien, N. lat. 8° to the utmost known regions of the N., and spreads from Bhering's Straits to those of Bellisle, or rather, to embrace Greenland. Its breadth is very irregular; not exceeding 15 or 20 ms. near Panama; whilst from Bhering's straits to the straits of Bellisle, it extends to a distance of 3,300 geographical, or 3,800 English ms. bearing N. 76° W. From the straits of Bellisle to the isthmus of Darien, is 4,500 geographical, equal to 5212 English ms. North America is traversed by two great chains, and several minor ranges of mountains. The Appalachian or Alleghany mountains, extend through the United States from NE. to SW. from the state of New York, to Georgia, Alabama, and Mississippi, with a mean width of about 50 ms. Several detached ranges or groups rise NE. off the Hudson, and SE. off the St. Lawrence. The Masserne or Ozark mountains, extend from the centre of the state of Missouri toward Texas, and the other Spanish internal provinces, in a direction nearly parallel to the Appalachian chain. The length of the Appalachian is about 900 ms. with a mean elevation of, from 1,200 to 2,000 feet. The extent of the Masserne chain, is not very accurately known, but must exceed 600 ms.; its mean height cannot, in the present state of geographical knowledge, be estimated with any approximate degree of accuracy. The great spine of North America, is the Chippewan, Rocky, or as it is termed in Mexico, that of Anahuac. This immense chain reaches from the peninsula of Tehuantepec N. lat. 16° , to the Frozen Ocean at N. lat. 68° , or through upwards of 50 degrees of latitude; encircling nearly one-seventh part of the globe. In neither the Appalachian, or Masserne chains, nor in any of their neighbouring groups, have any active or extinct volcanoes been discovered; but in the southern part of the great central chain, an immense range of volcanoes or volcanic summits rise to from 10,000 to 17,700 feet. It is generally supposed, that the mountains of the isthmus of Darien, are continuations of the chain of Anahuac; but there is strong reason to believe, that the former are distinct and unconnected with the latter. A nameless range skirts along the Pacific Ocean, which from the defective surveys yet taken, cannot be very distinctly delineated. That part of North America W. of the Chippewan mountains, and N. of Colorado river, except the central parts of the valley of Columbia, remains either imperfectly or entirely unknown. North America has 2 great systems of rivers; that of the Atlantic Ocean; that of the Gulf of Mexico; that of the Frozen Ocean; that of Hudson's Bay; and that of the Pacific Ocean.

In the Atlantic system, the principal rivers are, St. John's of Florida, Altamaha, Savannah, Santee, Pedee, Cape Fear, Roanoke, James, Potomac, Susquehanna, Delaware, Hudson, Connecticut, Kennebec, Penobscot, St. John's of New Brunswick, and St. Lawrence. In the system of Hudson's Bay are included, besides many streams of lesser note, Rupert's, Albany, Severn, and Saskatchewan rivers. Into the Northern Ocean, McKenzie's, Peace, or Unjige river, is the only stream of considerable mag-

nitude yet known, to enter from the continent of North America. The rivers of the central valley of North America, are discharged into the Gulf of Mexico, amongst which the Mississippi presents its overwhelming flood; but besides that vast river, the Appalachicola, Mobile, Colorado, of the Gulf of Mexico, Rio Grande del Norte, and several others, are streams of great magnitude. The Santiago, Hiaqui, the Colorado of the Gulf of California, and the Columbia, are the only extensive rivers, the courses of which are correctly known, and which enter the Pacific Ocean from the continent of North America.

South America reaches from Cape Vela, N. lat. $12^{\circ} 15'$, to Cape Horn, S. lat. 56° , or through more than 68° of latitude, in nearly a N. and S. direction, exceeding 4,700 ms. in length. Its greatest breadth, is nearly at right angles to its greatest length; the former, stretching from Cape St. Roque, in the Atlantic Ocean, to Cape Blanco, in the Pacific Ocean, through 35° of lon., or S. lat. 5° , or over upwards of 2760 ms. South America is traversed by 3 great chains of mountains; the Andes, ranging along the western coast; the mountains of Brazil; and those of Caraccas or Venezuela. The Andes are commensurate with South America in its utmost length. Like the Appalachian, the Andes chain is composed of a number of collateral or rather parallel ridges. Those of the Andes, rise to enormous volcanic summits of from 10,000 to upwards of 20,000 feet, and are, those of the Asiatic chain of Himmalaya excepted, the highest on the globe. The Andes also similar to the chain of Anahuac, rise into and extend wide elevated habitable valleys from 2,000 to 9,000 feet elevation. From this vast system of mountains, the largest rivers of the earth have their sources, pouring their mighty volumes, however, from the position of the mountains, all towards the Atlantic Ocean. The Magdalen, Orinoco, Amazon, and Plate, have but comparative rills as contrasts on the Pacific side of the continent. The chain of Caraccas, seems to be rather an embranchment of the general chain of the Andes, than a distinct system. The course of the Caraccas chain from W. to E., appears to form its most distinguishing feature, whilst the general range of the Andes, are from N. to S. nearly. The Caraccas chain in no part, rises above about 8450; it extends along the coast at no great distance from the sea, and expires towards the gulf of Cora, or mouth of the Orinoco river. The Brazilian chain is distinct, rising about S. lat. 30° , and stretching towards the equator, expires near the Atlantic Ocean, between the mouth of the Amazon river, and Cape St. Roque. This chain extends upwards of 2,000 ms. but is in no place very elevated. South America exhibits four systems of rivers; that of the Pacific Ocean, that of the Caribbean sea; the great central system, and that of Brazil. The Pacific system of South American rivers, presents in a distance of near 5,000 ms., an innumerable list of small streams; but from the approximation of the Cordillera, to the Pacific Ocean, no single river of any considerable magnitude. The Calicalla, Imperial, Biobio, Cuyuta, and a few others in Chili, with the Guaquil in Quito,

are the principal streams discharged westward from the Andes. Atrato, Magdalena, and Taucaya, in the Republic of Columbia, are the only rivers of the Caribbean system, of any magnitude worthy of notice. The most interesting river system, not only in America, but upon the globe, is that of the centre of South America. This vast system, extends from the 52° S. lat., to the 10° N. lat., through upwards of 4,300 ms. in length, with a breadth from the extreme western sources, to the mouth of the Amazon river, through 30° of lon. on the Equator, or above 2000 ms. Over this immense surface flow, besides innumerable smaller streams, the Orinoco, Amazon, and Plate, with their various branches, many of which, are themselves rivers of great length and magnitude. An elongation of this system reaches beyond the Plate, and stretches to the river Galegas, or Cape Fairweather, S. lat. $51^{\circ} 30'$. In this space is included the rivers, Colorado, Negro, St. Mathias, Camerones, Point Desire, and Gallegos. The fourth and last of the river systems of South America, extends from Cape Santa Maria S. lat. $34^{\circ} 30'$, to S. lat. 1° , and is bounded W. by the Brazilian mountains, or dividing line between the waters of the Amazon, and Plate rivers, and those included within itself, and on all other sides by the Atlantic Ocean. This system may be correctly designated the Brazilian, and contains the streams of the Rio Grande, Parayba, Doce, Patuxo, St. Francisco, Parnaiba, Pinare, and Gurupy. The islands of the West India, form a part of America, but it is difficult to assign any point of division in this Archipelago, to mark the line of separation between the two great sections of the continent. Indeed any such division must be arbitrary. In common estimation, the Caribbean Islands, from Barbada to Trinidad inclusive, are viewed attached to South America, whilst the Leeward Islands, and St. Domingo, Jamaica, Cuba, and the Bahamas, are joined with North America. Each great section has, however, numerous islands unequivocally belonging to it. To North America may be added the vast but desolate expanse of Greenland, together with a nameless maze of frozen islands along the entire northern extent of the continent. Iceland, from its proximity to Greenland, is decidedly an American island. In the Gulf of St. Lawrence are the islands of Newfoundland, Anticosti, the Magdalen islands, Prince Edward, Cape Breton, and some of lesser note. Along the Pacific side of North America, are found a few small islands in the gulf of Panama, the group of Revillagigedo, W. of Mexico, and S. of the Peninsula of California; Quadra and Vancouver, Queen Charlotte, Prince of Wales, and King George, with many smaller islands, lie opposite and close to the coast between N. lat. 48° , and N. lat. 58° . In the great bay between the Peninsula of Alaska and Prince William's sound, beside several others, are the islands of Montagu and Knightak. The Fox or Aleutian islands, extend SW. and W. from the point of Alaska towards Asia. Along the North American coast, and within the sea of Kamtschatka, some unimportant islands exist, and completes the list of North American islands. South America, compared with its extent, is in-

a remarkable manner unaccompanied with islands. However, independent of those already noticed, are found along the Columbian coast, Curacao, Buenos Ayres, Orchilla, and Margarita. In the mouth of the Amazon and Tocantins, and the Delta of the Orinoco, are an immense number of nameless islands, with a few of sufficient importance to merit designating terms. Joannes in the estuary of the Amazon, is the most extensive of those two groups. From the mouth of the Amazon to the straits of Magellan, are innumerable small and interesting islands, but no one the size of which would entitle it to particular notice in a general view. Separated from the continent by the straits of Magellan, spreads the large but desolate island of Terra del Fuego, and about 300 ms. to the NE. of the latter, stands the still more barren and inhospitable group of the Falkland islands. Passing the straits of Magellan into the Pacific Ocean, and following the South American coast, are first met the group of the Toledo islands; farther N. the island of Madre de Dios: the fine Archipelago of Chiloe opens between S. lat. 42° and 44°. The group of Juan Fernando, S. lat. 34°, W. lon. W. C. 5°, is generally considered as American. Beyond the latter, proceeding N. at a long interval, we find a few small islands in the bay of Guaquil; and under the equator, W. lon. W. C. 15°, the Galapagos group closes the list of South American islands.

The general resemblance between the eastern and western continent, is in no other circumstance more striking, than in their respective inland seas. South America, like Africa, is an immense continuous body of land, whilst North America, similar to Europe and Asia, is deeply indented by inland seas. The Caribbean sea, extends between South America, North America, and the West Indian Archipelago. This fine sheet of water, stretches upwards of 2000 ms. from the island of Trinidad, to the straits between Cuba and Yucatan; with a mean breadth of 500 ms. The Gulf of Mexico, lies in form of an immense ellipse, about 1000 ms. in length, with a mean width of 600 ms. This gulf is a real Mediterranean sea, having only two outlets towards the main Atlantic. The space between North America and Greenland, is occupied by the immense gulfs of Hudson's and Baffin's bays. On the Pacific coast, North America is again penetrated by the long and narrow Vermillion sea, or gulf of California. See those seas under their respective heads; See also article *Earth*.

America, and its islands, including Greenland, now (1826) advancing from N. to S. is held exclusive of the Aborigines, by Denmark, Russia, Great Britain, United States, Spain, Mexico, Central America, (Guatemala,) France, Netherlands, Sweden, Columbia, Republic of Bolivar, Peru, Brazil, United Provinces of La Plata, and Chili. See each of these subdivisions, under their respective heads.

Russian America extends, agreeable to the claims of that government, along the coast of North America, from N. lat. 51°, to the utmost known lands N., extending indefinitely inland, and embracing all the islands within 100 ms. off the coast; and must include 1,160,000 sqms.

of land. British America consists of all the northern parts of the continent E. of the Russian territories, and N. from those of the United States, with the islands of Newfoundland, Anticosti, Cape Breton, Prince Edward, Bahamas, Virgin Islands, Jamaica, Trinidad, and some others of lesser note: Mexican America extends from the confines of the kingdom of Guatemala, W. of the Gulf of Mexico, and SW. of the United States, as far as N. lat. 42°. The Republic of Columbia, embraces the vast regions formerly included in the captain-generalship of Venezuela, and the viceroyalty of New Grenada, with a part of northern Peru. Spain yet retains Cuba and Porto Rico. Danish America includes Iceland, Greenland, and the small islands of St. Croix, and St. Thomas. The kingdom of the Netherlands, claims St. Eustatius, and some other islands of little note, with extensive territories on the South American coast in Guyana. France holds Guadaloupe, Martinico, and a part of Guyana. The wide spread regions held by the Portuguese in America, extend from the 4° of N. lat. to the 35° of S. lat. along the Atlantic Ocean, and inland to the 72° of lon. W. of London, and embracing a territory of 2,700 ms. in length from N. to S. and 2,600 ms. in breadth from E. to W. The United Provinces of Buenos Ayres, or La Plata, claim all that formerly appertained to Spain upon the waters of that mighty river, as do Chili and Peru along the Pacific Ocean, from the limits of New Grenada, to the utmost bounds of civilized settlement towards the southern extremity of the continent.

The following table was extracted from the National Intelligence, of June 30th, 1825. The table No. 1. I compiled for my Geographical Lectures, and published in 1821. It was afterwards inserted in the first edition of my Dictionary. As the two tables were framed without concert between the authors, they may afford some interesting points of comparison. The enumeration given by M. de Humboldt, is

probably founded on data collected as early as 1805, and if so, accounts for his estimate of the aggregate population, being lower than mine.

POPULATION OF AMERICA, No. II.

The Paris Journal des Debats, has copied from the Revue Protestante, an interesting letter from Humboldt, the celebrated traveller, to M. Ch. Coquerel, Pastor at Amsterdam, on the proportion which the Catholics and Protestants of America bear to each other, on the different races in America, and the languages spoken in that continent. The details are to be given in the third volume of his Travels to the Equinoctial Regions, which is about to appear. The following are a few of his statements:

Total Population of America is 34,284,000

Since the preceding matter was prepared for the press, the following comparative esti-

mate was republished in the Philadelphia Evening Post. Willing to condense every document deserving notice on this very important subject, I have concluded to give it a place in the article America. I may, however, repeat the remark, that evidently, M. de Humboldt, founds his estimates on data of an earlier date, than the present epoch. It may be seen, by reference to the article United States, that the ratio of increase, is within a small fraction, of 3½ per cent; and if so, there must have been in the United States, at the end of 1825, 11,876,000 inhabitants. By reference to the 2 articles on Upper and Lower Canada, it will be also seen, that at the end of 1825, these 2 provinces had a collective population of 500,000 nearly. Consequently, the United States, and the Canadas, are now peopled by 12,376,000 inhabitants.

POPULATION OF AMERICA, No. III.

The following estimates of the population of the American Continent and Islands S. of the United States, by M. de Humboldt, we derive from the "Bulletin Universel des Sciences et de l'Industrie," for July, and September last.

Mexico.—Whites, 1,230,000; Indians, 3,700,000; mixed races, viz. Mestizoes, Mulattoes, Zamboes, and mixture of mixtures, (mélange des mélanges) 860,000; negroes, 10,000. Total, 6,800,000.

Guatemala.—Whites, 280,000; Indians 800,000; mixed races, 420,000; negroes, 20,000. Total, 1,600,000.

Columbia.—Whites, 642,000; Indians, 720,000; mixed races, 1,256,000; negroes, 167,000. Total 2,785,000.

Peru and Chili.—Whites, 465,000; Indians, 1,030,000; mixed races, 853,000; negroes, 152,000. Total of Peru, 1,400,000. Total of Chili, 1,100,000.

Buenos Ayres, and the new Republic of Bolivar.—Whites, 320,000; Indians, 1,200,000; mixed races, 742,000; negroes, 38,000. Total 2,300,000. (The population of the Republic of Bolivar, does not probably exceed half a million.)

Brazil.—Whites, 920,000; Indians, 260,000; mixed races, 860,000; negroes, 1,960,000. Total, 4,000,000.

Guinea.—English, Dutch, and French Whites, 10,000; mixed races, 20,000; slaves, and free blacks, 206,000. Total, 236,000.

West India Islands.—British, Spanish, French, Dutch, Danish, and Swedish, and Independent Hayti. Whites, 482,600; free blacks, and mulattoes, 1,147,500. Total, 2,843,000.

Indians.—Independent tribes, 420,000.

RECAPITULATION.

Whites, - - - - - 4,350,000
Indians, - - - - - 8,210,000
Mixed races, - - - - - 6,598,000
Negroes, - - - - - 4,516,000

Total Population, - - - 23,484,000

M. de Humboldt, estimates the population of the rest of America, viz. the United States and British North American possessions, as follows: Whites, 9,125,000; Negroes, 1,920,000; Mixed races, 30,000; Independent Indians, 420,000.

Total, 11,475,000. According to his calculations, the total population of America is about 35,000,000, of which, the whites compose 38 per cent. Indians 25, negroes 19, and mixed races 18. Of this population, 22,486,000 are supposed to be Catholics; 17,636,000 Protestants, and 820,000 pagans. The English language is spoken by, 11,647,000; the Spanish by 10,504,000; Indian language by 7,593,000; the Portuguese by 3,740,000; the French by 1,242,000; and the Dutch, Danish, Swedish, or Russian, by 216,000.

The whole population of America is only 5,000,000 more than that of France, and not twice as much as that of the islands of Great Britain, and Ireland. The greater part of this continent yet remains in its natural wild and uncultivated state, untouched by the hand of civilized man. The number of whites in the United States, is double that of all the nations and colonies S. of us. The whites of the republics S. of Mexico, Guatemala, Colombia, Peru, Chili, Buenos Ayres, and Bolivar, are of the Spanish origin; those of the empire of Brazil are descendants of Portuguese; and those of the West Indies are Spanish, British, French, &c. The mixed races are said to constitute the most robust and useful classes of the new states. They are of all colours, from the dark shade of the African, to the bright hue of the European. A *Mestizo* is the issue of a white and an Indian; a *Mulatto*, of a white and negro; a *Zambo*, of an Indian and negro, and the descendants ramify into an endless multiplicity of varieties, forming what M. de Humboldt calls, a mixture of mixtures. Many persons of the mixed race, are as white as the Spaniards and Portuguese. The dependent Indians are, for the most part, a harmless, superstitious, and indolent race of beings. The *Araucanians* to the S. of Chili, are the most brave and noble tribe of independent Indians in South America. There are only 387,000 negroes in the seven republics above named, and we believe the greater part of these are now free, most of these states having taken measures for emancipation of the blacks. In Brazil, the negroes compose about one half the population. This empire, with less than a million of whites, has more blacks, and probably more slaves, than the United States. In the West Indies, the free blacks outnumber the slaves. Most of the former belong to the republic of Hayti, and the Island of Cuba.

America, pstv. Alexander cty. Ill., on the right bank of Ohio river, 15 ms. above its mouth.

Amersfort, town of Holland, in Utrecht. It has a trade in beer and tobacco, and goods from Germany are shipped here for Amsterdam. It is located in a fertile country, on the river Embs, 10 ms. ENE. of Utrecht.

Amersham, or *Agmondesham*, borough in Buckinghamshire, Eng., on a vale between woody hills, 26 ms. NW. of London.

Ames, village, Athens cty. Ohio, in the tp. of Amesville, 12 ms. NE. from Athens.

Amesbury, town in Essex cty. Mass., about 4 ms. from Newburyport, and 50 ms. NE. from Boston. It is a flourishing place, being situated on a navigable river.

Amesbury or *Ambresbury*, a town in Wiltshire, Eng. 6 ms. N. of Salisbury, and 77 W. of London.

Amesville, tp. of Athens cty. Ohio. Pop. in 1810, 608, in 1820, 707.

Amsterdam, tp. Montgomery cty. N. Y. Pop. in 1820, 3171.

Amsterdam, large, rich and populous city, Holland. The walls are high, and well fortified; and the bridge which joins the rampart is built over the river Amstel, and is one of the finest pieces of architecture in these parts. Few cities have their public buildings so fine, numerous, and well kept. Here are many handsome churches, and hospitals for persons of all religions and countries. The exchange is one of the principal ornaments of the city, and the harbour is one of the largest and finest in Europe, where a vast number of merchant ships may always be seen; though there is a bar at its entrance, which is, however, a great security against foreign enemies. The foundation of this town is laid upon piles, driven into a morass, and under the stadthouse alone are 13,000. The streets are spacious and well paved, and most of them have canals, with rows of trees on each side. It is seated at the confluence of the rivers Amstel and Wye, 65 ms. N. of Antwerp, 175 E. by N. of London, 240 N. by E. of Paris, and 560 NW. of Vienna. Lon. 4° 50' E. lat. 52° 23' N. In addition to the immense canals previously executed in the kingdom of the Netherlands, one of primary importance has been recently formed from the Helder to Amsterdam. The best account of this canal, probably, yet published in the United States, is contained in the following extract from a letter dated January 14th, 1826, from Mr. Ed. Everett, to Mr. Joseph M. White, both of the House of Representatives:

"The canal from the Helder to Amsterdam is a work, of which the possibility would hardly have been conceived of by any other people than that by whom it has been achieved, and who unite, in equal degrees, the qualities of patience and enterprise. No inconsiderable portion of the route of this canal lies over a tract as low or lower than the level of the neighbouring seas; and it is through a region like this, that patience and enterprise have carried a canal, near fifty miles in length, navigable for vessels of war.

"The object of this canal was to enable vessels of burden to come up to Amsterdam, and thereby avoid the delay and expense of carrying on the foreign commerce of that city by means of trans-shipment and lighters. Very interesting and scientific statements were published, about a year since, I believe, by Loammi Baldwin, Esq. in one of the newspapers of Boston. I had supposed that the remarks of this accomplished civil engineer were in my possession at the time I undertook to communicate to you some data on this subject; and it is with real concern that I find them not to be among my papers. I have however sent for them to Boston. Meantime, the following letter from Mr. Parker, Consul of the United States at Amster-

dam, which I find in another Boston paper, will serve to give some general ideas on the subject:

Amsterdam, 3d January, 1825.

SIR:—I presume it is not generally known to the merchants and ship owners of the United States, that a canal has been cut from the Helder to this city, for the purpose of enabling large vessels to come up and discharge their cargoes here, thereby avoiding the expense and inconvenience of employing lighters. After a labour of several years, attended with great expense and many difficulties, the work is now nearly completed, and the canals have been opened. A frigate and several merchantmen have passed through, proving, beyond a doubt, notwithstanding all that prejudice and ill-nature have said to the contrary, the accomplishment of the great object in contemplation.

The whole length of the canal from this city (Amsterdam) to the Helder, is forty-eight English miles. The depth is now sixteen feet; but it will be increased to twenty in the course of the ensuing summer. Steam boats are now building for the purpose of towing large ships. Smaller ones may be drawn by horses; and when the wind is favourable, the canal regulations permit the use of fore and aft sails. It is calculated that six horses will tow a ship of three hundred tons, with her full cargo on board; and that when the path for horses is completed, such a vessel may be brought from the Helder to our harbour, in two days; at an expense not exceeding 100 florins, (about 42 dollars.) The frigate Bellona was forty days on her passage to the Helder, owing to circumstances which it may be proper to explain. The canal having been opened, it was the wish of government, that a national ship of war should be the first to pass through it; and this was accomplished under every disadvantage. The weather was extremely boisterous, and the days very short; there being only nine hours daylight. The ship drew as much water as the depth of the canal; and the want of posts (Dolphins,) at the different turnings, made it extremely difficult to steer a ship of such great length. But the most serious difficulty was the want of a path for horses; and the road at the side of the canal being covered by ground newly thrown up, could not support the weight of the horses, so that they sunk in the mire.

I am authorized to state, that in the course of a few months, every obstacle will be removed. Posts will be placed at short distances, along the whole canal, to assist in steering; and for making vessels fast when necessary; and the horse path will be put in proper order, so as to give every facility for the thorough accomplishment of the object in view.

Since the above was written, several large vessels have come through the canal: some without the assistance of horses. An English frigate made the passage of the Helder, in thirty-four hours. See *Kingdom of the Netherlands*.

Andes, tp. Delaware cty. N. Y. Pop. in 1820, 1378.

Andes, or *Cordilleras*, chain of mountains in South America, which, running from the most

northern part of Peru, to the straits of Magellan, are the longest and most remarkable in the world. They divide the whole southern part of America, and run a length of 4300 ms. They are much superior in height to any other known mountains, those of the Gangetic Hindoostan excepted; for the plain of Quito, which may be considered as the base of the Andes, is elevated nearly as far above the sea as the top of the Pyrenees; and they rise, in different places, more than one third above the Peak of Teneriffe, once thought to be the highest land in the ancient hemisphere. The Andes may literally be said to hide their heads in the clouds; the storms often roll, and the thunder bursts below their summits, which, though exposed to the rays of the sun in the torrid zone, are covered with everlasting snow. The Andes are not composed of one continued, but of many collateral ridges, with, in many places, very wide and elevated valleys. The following are the most elevated peaks of this chain which have been scientifically measured, but it is supposed that a number of the summits in that part of the Andes which traverses Chili, are as elevated as any of those within the tropical regions.

| | | | | | |
|--------------|---|---|---|---|--------|
| Chimborazo | - | - | - | - | 21,440 |
| Disca Casada | - | - | - | - | 19,570 |
| Cayambe Urcu | - | - | - | - | 19,392 |
| Antesana | - | - | - | - | 19,150 |
| Cotopaxi | - | - | - | - | 18,864 |
| Altair | - | - | - | - | 17,475 |
| Sangul | - | - | - | - | 17,152 |
| Tunguragua | - | - | - | - | 16,579 |

All the climates of the world are included in the slopes and valleys of the Andes, and upon its snow-clad summits. Indeed, many of its most elevated peaks reach above the region of vapour, and of course above that of snow. The vegetation upon those immense slopes partakes of the variety of elevation, every vegetable is found, from the most tender tropical plants to the lichens of the arctic regions. The highest points to which the activity and perseverance of travellers have ever attained, have been reached in the Andes by Humboldt and Bonpland. By their own calculation those adventurers and intelligent philosophers ascended to 19,300 feet, and found the summit of Chimborazo rising to 2140 feet still higher, giving in all 21,440 feet. This is the highest land yet measured on the western hemisphere. To the height of about 5000 feet reigns a perpetual spring, seldom varying 7 or 8 degrees of Fahrenheit. The limit of perpetual congelation, according to Humboldt, is under the equator 15,700 feet, lowering about 700 feet at N. lat. 20° , or about 35 feet in each degree of lat. Between the tropics and below an elevation of 5000 feet, lies the region of plantains, cossava, cocoa, maize, indigo, sugar, cotton, coffee, and other very tender plants. Below 9000 feet the orcal gramina, the apple, and many other European vegetables, but above that elevation large trees begin to disappear. Grasses appear as high as 15,000 feet, but above that elevation the lichens close the last vestige of vegetable life, and leave the highest summits clothed with eternal frost. The truth of the commonly re-

ceived opinion is very problematical, that the Andes of South America, and the Mexican mountains are detached parts of the same chain.

Appalachicola, river of the U. S. The basin of the Appalachicola is remarkable, as forming the connecting link between the waters which flow into the gulf of Mexico, and those which enter the Atlantic ocean. The Appalachicola is formed by two streams, the Chatahooche and Flint rivers. The former rises in the Appalachian mountains, at N. lat. 35° , interlocking with the sources of Tennessee, Oakmulgee, Oconee, and Savannah rivers; and flowing SW. by S. though 2° of lat. turns thence nearly due S. to N. lat. $30^{\circ} 45'$, where it receives the Flint. The latter, an inferior stream to the former, has its sources in the angle between the Oakmulgee and Chatahooche rivers, at N. lat. $33^{\circ} 40'$, flowing SW. by S. 200 ms. unites with the Chatahooche, and forms the Appalachicola. This latter fine river flows a little W. of S. to N. lat. $29^{\circ} 50'$, having an entire course of about 70. ms. Its mouth is into St. George's sound. The basin of the Appalachicola affords an inland navigable expanse of 400 ms. in length, with a mean width of 150. ms. and having an area of about 20,000 sqms. Though interrupted by some falls, and many shoals, the rivers Chatahooche and Flint are navigable almost to their sources; and schooners of considerable size ascend the Appalachicola, to its head. Cotton, tobacco, grain, fur, and lumber, are the common staples of this basin.

Arabia, country of Asia, bounded on the N. by the ancient Mesopotamia, on the E. by the Gulf of Persia and Ormus, on the S. by the Indian Ocean, and on the W. by the Red Sea and Egypt. It is divided into 3 parts, Arabia Petrea, Deserta, and Felix. Arabia Petrea, is the smallest of the 3, and towards the N. is full of mountains, with few inhabitants, on account of its barrenness. It had its name from the town of Petrea, its ancient capital, now destroyed. It differs little from Arabia Deserta, so called from the nature of the soil, which is generally a barren sand: but there are great flocks of sheep and herds of cattle near the Euphrates, where the land is good. In the desert are great numbers of ostriches, and there is a fine breed of camels in several places. Arabia Felix is so called on account of its fertility with regard to the rest. The Arabs in the desert live wandering lives, removing from place to place, partly for the sake of pasture, and partly to lie in wait for the caravans, which they often rob, as they travel over part of this desert from Bassora to Aleppo, and from Egypt to Mecca, in order to visit Mahomet's tomb. Arabia Felix produces frankincense, myrrh, balm of Gilead, gum arabic, and coffee, of which latter they export prodigious quantities. The famous Mahomet was a native of this country, and his followers, soon after his death, conquered a great part of Asia, Africa, and Europe, establishing their religion wherever they came: It lies between 35° and 50° E. lon., and 12° and 33° N. lat. extending 130 ms. in length, and 1200 in breadth.

Aracan, or *Reccan*, country of Asia, bounded on the N. by Roshaan, on the E. by Burma, on the S. by the coast of Ava, and on the W. by the Gulf of Bengal. They have only two seasons, the rainy season, which continues from April to October, and the fair season, which includes all the rest of the year, and is called the summer. There are such numbers of elephants, buffaloes, and tigers, that but few places are inhabited on account of the ravages made by these animals. The commodities are timber, lead, tin, and elephants' teeth; and sometimes the traders meet with diamonds, rubies, and other precious stones. The country called Aracan, lies to the SE. from Bengal, between N. lat. 20° and 25°, and between the Burampooter and Irrawaddy rivers.

Araguay, river of Brazil, the SW. branch of the Tocantinas.

Aral, basin of, is the SE. part of the greater basin of the Caspian: The Aral receives from the Belur Dag mountains, the 2 great rivers Amu and Sihon. The sources of these streams are scattered from N. lat. 36° to 50°, or through 14° of lat., or about 1000 ms. The slope from the Belur Dag towards the Aral, is about 400 ms. in mean width; therefore, this fine arable tract comprises 400,000 sqms. Sandy deserts prevail between the Aral and Caspian seas. The Aral basin is nearly commensurate with Independent Tartary.

Aral, lake of Asia, 200 ms. E. of the Caspian sea. It is 300 ms. in length, and in some places 150 in breadth. It lies between 58° and 62°

Araza, river of S. America, rising at S. lat. 11°, flows first upwards of 100 ms. northward, and thence NE. 300 ms., is lost in the Amazon S. lat. 2° 39', and is the next great confluent above the Madeira. Yurba, Yutay, and Yavari, regularly follow the Araza, advancing up the Amazon. These 4 rivers rise in the same region, and curving alike, at a distance of 30 or 40 ms. from each other, have each a course of about 400 ms. In some maps, they are all made to flow from one common source, the Roguaguala Lake, and again, the latter is made to communicate with the Para, a branch of the Ucayole. It may be doubted whether any such conformation exists in nature. That part of S. America is yet very imperfectly known.

Ardennes, forest on the river Meuse, between Thionville and Liege.

Ardrach, small kingdom of Africa, in Guinea. It lies at the bottom of the gulf of St. Thomas. The inhabitants are very licentious, and have neither temple nor any place for religious worship. However, they are very courageous, and their king was absolute, till the king of Dahomy reduced and burnt the towns. The air is very unwholesome to Europeans; yet the natives live to a great age; but the small pox makes great destruction among them. This country is fertile in Indian corn, palm wine, plants, and fruits, which last all the year, and they make a great deal of salt. It has a town of the same name. Lon. $3^{\circ} 5' lat. E. 6^{\circ} N.$

Ardres, town of France, in the department of the Straits of Calais. It is 8 ms. S. of Calais. Lon. $1^{\circ} 59' E.$ lat. $50^{\circ} 50' N.$

Ardo, or *Ardon*, town on the Slave Coast of Guinea, at the mouth of the river Formoso. The English had once a factory here, as the Dutch have still. Lon. $5^{\circ} 5' E.$ lat. $6^{\circ} N.$

Ardeca, seaport of the Red Sea, 55 ms. from Suvaquam.

Aremberg, town of Westphalia, capital of a cty. of the same name. It is seated on a river, 22 ms. S. of Cologne. Lon. $7^{\circ} 3' E.$ lat. $50^{\circ} 22' N.$

Arensburg, town of Westphalia, on a hill in the cty. of the same name, by the river Roer 50 ms. NE. of Cologne. Lon. $8^{\circ} 20' E.$ lat. $51^{\circ} 26' N.$

Argyle, tp. Washington Cty. N. Y. on the S. side of the river Hudson, S. of Kinsburg, and contained in 1820, 2811 inhabitants.

Argyleshire, cty of Sctd. bounded on the N. by Invernesshire, on the E. by the counties of Perth and Dunbarton, on the S. and W. by the Atlantic Ocean, by which it is broken into islands and peninsulas. Its extent is very considerable, being not less than 90 ms. in length and 70 in breadth. This cty. affords a very wild prospect of hills, rocks, and huge mountains, piled upon each other in dreadful disorder, bare, bleak, and barren to the view; or covered with shagged heath, which in summer is variegated with an agreeable bloom of a purple colour. These high grounds, though little fitted for cultivation, afford excellent pasturage.

Argyro-Castro, city of European Turkey, in Albania, situated in a very mountainous district, about 40 ms. NE. by E. from Butrinto, and 9 ms. N. from Libokavo. According to Hobhouse, it contains 20,000 inhabitants, chiefly Turks. Though environed by high mountains, *Argyro-Castro* occupies part of a very fruitful vale, watered by the ancient Cerydnus, now Voussa river. It is supposed to be the Hadrianopolis of the Romans.

Arhusen, seaport of Denmark, in N. Jutland, with a bishop's see. It is seated on the Baltic Sea, at the mouth of the Guda, and surrounded by forests full of game. It is 25 ms. S. of Wiberg. Lon. $9^{\circ} 50' E.$ lat. $56^{\circ} 5' N.$

Arica, seaport of Peru, 550 ms. S. E. of Lima. Here the treasure brought from Potosi is shipped; and there are many farms employed in the cultivation of Guinea pepper, in which it has a great trade to Lima. Lon. $71^{\circ} 6' W.$ lat. $18^{\circ} 27' S.$

Aripo, town on the west coast of Ceylon, at the mouth of the river Sagunda. To the east of it is a pearl fishery. Lon. $80^{\circ} 25' E.$ lat. $8^{\circ} 42' N.$

Arkansas, river of the U. S., which rises in the Chippewan or Rocky mountains, about lat. $40^{\circ} N.$ lon. W. C. $37^{\circ} W.$; and joins the Miss. river at lat. $34^{\circ} N.$ lon. W. C. $14^{\circ} W.$ This great river has a general or comparative course of more than 1400 ms., and by its windings exceeds 2000 ms. It receives numerous branches, the principal of which are the Canadian, Fork, Negracka, and Poteau. The Arkansas flows through, and gives name to the territory of the same name.

In the present state of geographic science, it is impracticable to fix with adequate precision the area of the valley of the Arkansas, but an approximation to accuracy may not be entirely unsatisfactory. From the mouth to a distance of 250 ms. the valley is confined very nearly to the mere bed of the river. It then widens, and embraces a region of about 600 by 300, and with a superficies of 180,000 sqms. The far greater part of this immense surface is open grassy plains. It is traversed by the Masserne mountains, in a direction from NE. to SW. The entire length of the Arkansas, by comparative courses, is about 1200 ms.

Arkansas, territory of the U. S. formed out of the ancient Lou. It is bounded E. by the Miss. river, S. by Lou. and Red river, W. by Texas, and N. by the unappropriated territories of the U. S. and by Miss.; being about 550 ms. in length from E. to W., with a mean width of near 200, extending over an area of about 100,000 sqms. It lies between N. lat. 33° and $36^{\circ} 30'.$ The face of the country, from its great extent, is very much diversified. It is intersected by, besides the Arkansas, the branches of Red, Ouachita, and White rivers. The Ozark, or Masserne mountains, traverse from NE. to SW., rising in Miss. and stretching through Arkansas, extend into Texas. That part of the territory to the SE., off the Massernes, is generally low, and in many places liable to annual submersion. To the NW. of the mountains, the physiognomy of the country presents a generally open expanse of prairie, without wood, except near the margin of the streams. The seasons of the year partake also of the extremes incident to so great an extent, and in a country where the face of the earth affords so much difference of level. The summers are as remarkable as the winters, for extremes of temperature. As low as N. lat. 35° , and on a level with the Arkansas river, the thermometer ranges from 77.

above, to upwards of 20 below zero. The soil exhibits every variety, from the most productive to the most sterile; therefore, it may be easily conceived, that in a region where the temperature of the air, and the qualities of the soil offer so much variety, vegetation must be very greatly influenced. The indigenous forest trees are specifically numerous, and very large. The principal species are, oaks, many species; hickory, many species; ash, many species; sycamore, cotton wood, linden, maple, three or four species; lircodendron tulipifera, locust, and pine. The cultivated fruit trees are the apple, pear, peach, plum, nectarine, cherry and quince. The various kinds of small grain, succeed well, such as wheat, rye, oats, barley, and maize. Garden plants are abundant, and grow luxuriantly. In metallic wealth, Arkansas is productive in iron ore, gypsum, and common salt. Indications of other minerals are common, but the country has been too imperfectly surveyed to develop its fossil resources. Cotton, Indian corn, flour, peltry, salted provisions, and lumber, are the staples of the territory. Arkansas was among the most ancient settlements of the French in Lou. That nation had a hunting and trading post on the Arkansas river as early as the beginning of the eighteenth century; from the peculiar situation of the adjacent country, the settlements upon that river made little advance before the transfer of Lou. to the U. S. Since that period, Arkansas has been involved in the various vicissitudes of the country of which it formed a part; and on the formation of Miss. into a state, became a territory of the U. S.

In 1820, it was politically divided into the following counties, which had the number of inhabitants annexed to each respectively.

Ash, cty. of N. C. forming the NW angle of that state, having Buncombe SW., Burke S., Wilkes SE. by E., and part of Yirg. N., and part of Ten W. It is 64 ms. long, from SW. to NE. with a mean width of 12 ms; area 768 sqms. The surface of the cty. is hilly and even mountainous. The air is pure and healthy, and the soil in part productive. Chief town Jefferson. Ctl. lat. $36^{\circ} 20'$ W. lon. W. C. $4^{\circ} 49'$. Pop. 1820, 4335.

Ashland, pto. Richland cty. Ohio, 80 ms. NNE. from Columbus.

Ashtabula, small river or creek of Ohio, in the cty. of Ashtabula, about 30 ms. in length, and flows into Lake Erie.

Ashtabula, cty. of Ohio, forming the NE. angle of that state having Trumbull S., Geauga W., lake Erie NW., and part of Penn. E. It is 28 ms. in length, and 25 in breadth, extending over an area of 700 sqms. The face

of this country is hilly; the soil is, however, fertile, and well wooded and watered. Jefferson is the chief town. N. lat $41^{\circ} 43'$ and lon. from W. C. 4° W. intersect in the western part of this cty. Pop. 1820, 7382.

Ashtabula, pto. Ashtabula cty. Ohio. The village is on lake Erie, at the mouth of Ashtabula creek, 40 ms. SSW. from Erie in Penn.

Ashton-under-Line, village of Eng. in Lancashire, seven ms. E. of Manchester, with a manufactory of cotton, and an iron foundry.

Ashville, pto. Buncombe cty. N. C. The village stands on French Broad, 40 ms. NW. from Rutherfordton, and 273° W. from Raleigh.

Ashville, pstv. St. Clair cty. AL., about 70 ms. a little E. of S. from Huntsville.

Ashtwell, village in Hertfordshire, on the river Rhee, that issues from a rock at the S. end of the town. Near the church are the remains of a Roman camp, which consists of 12 acres of land, enclosed by a deep ditch, and formerly a rampart. It is four ms. N. of Baldock.

Asia, one of the four great parts of the world, situated between lon. 25° and 180° E. from London, and between the equator and lat 80° N. It extends 4740 ms from the Dardanelles on the W. to Behring's straits; and 4380 ms from the most southern part of Malacca, to the most northern cape of Nova Zembla: being superior in extent, as well as in many other respects, to Africa and Europe. It is separated from Europe, according to the English geographers, by the Mediterranean, the Archipelago, the Black sea, the Palus Mæotis, the Don, part of the Volga, and the Ural mountains, from America by Behring's straits, and the Pacific Ocean; and from Africa by the Red Sea, and the isthmus of Suez. But the French and German geographers separate Asia and Europe by the Ural mountains, Ural river, Caspian Sea, Caucasus mountains, Black Sea, straits of the Bosphorus, sea of Marmora, straits of Dardanelles, and Archipelago. All the other parts are surrounded by the ocean. The principal countries in this continent are Siberia, Tartary, China, Tibet, Hindoostan, Siam, Burmah, Persia, Arabia, Syria, Palestine, Natolia, Diar-becker, Irac, Armenia, Georgia, Curdistan, &c. Asia is looked upon as that part of the world, which, of all others, has been most peculiarly distinguished by heaven. There it was the first man was created; there the patriarchs lived; there the law was given to Moses, and the greatest and most celebrated monarchies were formed. Lastly, in Asia, Jesus Christ appeared, and from thence it is that the light of the gospel was diffused over all the world. Laws, arts, sciences, and religion; almost all had their original in Asia. See *Earth*.

Asoph, sea, anciently the Paulus Mæotis, lying N. of the Black Sea, with which it has a communication by the strait of Caffa, the ancient Cimmerian Bosphorus. This sea, which is sometimes called the sea of Zabak, extends 150 ms. from SW. to NE. Lon. from 35° to 42° E. lat. from 45° to 47° N. The Asoph sea is properly the estuary of the Don; it is shallow and only admits vessels of moderate draught, and like other small seas of Europe, is probably in a state of progressive desiccation.

Asoph, district of the Russian empire, in the province of Catharinensklaf including a large tract of territory to the E. and W. of Asoph. Catharinensklaf is the capital.

Asoph, late capital of a district of the same name, in Asia, seated near the mouth of the Don, to the E. of the sea of Asoph. It has been several times taken and retaken by the Turks and Russians. The branch of the Don, upon which it stands, is now so choked with sand, as scarcely to admit the smallest vessel, which renders the place less important than it was formerly. Lon. $41^{\circ} 30'$ E. lat. $47^{\circ} 18'$ N.

Aspern, town of Austria, on the left bank of the Danube, below Vienna, famous for a battle fought there, May 22d, 1809, between the French, under the Emperor Napoleon, and the Austrians; the latter were defeated.

Asperosa, town of Turkey in Europe, on the coast of the Archipelago, 22 ms. SE. of Nicopolis. Lon. $24^{\circ} 50'$ E. lat. $40^{\circ} 58'$ N.

Assam, country of Asia, bounded on the W. by Bengal and Bootan, on the N. by Thibet, and on the SE. and S. by Meckley. Its capital is Chergong, and the river Burrampooter flows through the whole length of it. The open parts are marked with population and tillage; the woods abound with elephants. Assam lies between lon. 91° and 96° E. and lat. 25° and 28° N.

Assancale, town of Armenia, on the river Aras, 22 miles E. of Arzerum. Here are hot baths much frequented. Lon. $41^{\circ} 10'$ E. lat. $39^{\circ} 46'$ N.

Assanpink, large creek of N. J. rises in Middlesex, from whence it flows SW., into the Delaware river, forming for a few miles above its mouth at Trenton, part of the boundary line between Burlington and Hunterdon counties. There are some cotton factories on this stream.

Assawamset, psto. Plymouth city, Mass., 50 ms. S. from Boston, and 30 E. from Providence.

Assens, seaport of Denmark, in the island of Fügen. It is the common passage from the duchy of Sleswick to Copenhagen, and is 17 ms. SW. of Odinsec. Lon. $10^{\circ} 21'$ E. lat. $55^{\circ} 17'$ N.

Assiniboin, river of North America, in the U. S. and British territories; rising by two large branches, the Assiniboin proper, and Red River. The former has its source in the recesses of Cabotia, as high as lat. $52^{\circ} 30'$ N. flows SE. 200 and E. 100, joins Red river. The latter rises in the U. S. as far S. as lat. $45^{\circ} 30'$, and flowing thence nearly N. about 300 ms. unites with the

Assiniboin, which continuing a short distance NE. is lost in the extreme southern angle of lake Winnipic. The regions drained by the Assiniboin and its confluent are flat, full of small lakes, and extend NW. from the sources of the Mississippi.

Assisio, city of Italy, in the duchy of Spoleto, on the side of a high mountain. The cathedral of St. Francis is magnificent, and composed of three churches, one above another. It is 70 ms. N. of Rome. Lon. $12^{\circ} 38'$ E. lat. 43° N.

Assos, seaport of Natolia, on a bay of the Archipelago, 12 ms. SE. of Troas. Lon. $26^{\circ} 36'$ E. lat. $39^{\circ} 32'$ N.

Assumption, psto. Lafourche, Interior Lou., 91 ms. W. from New Orleans.

Assumption, episcopal city, the capital of Paraguay, in S. America. It is a large, populous, and handsome town, and stands in a fertile country, on the river Paraguay. Lon. W. C. $17^{\circ} 25'$ E. lat. 26° N.

Assumption, parish of Lou. situated along both banks of the Lafourche river; having the interior of Lafourche SE., Atchafalaya river SW., Ascension NW. and St. James' and St. John's NE. It is about 35 ms. long, and 15 ms. wide; area 500 sqms. The face of the parish is level, and, except the margin of the Lafourche, and some other streams, liable to annual submersion. Soil extremely fertile. Staples sugar and cotton. No town of any consequence. Lon. lat. 30° and low. 14° W. from W. V. intersecting this parish near the banks of the Lafourche river. Pop. 1820, 3576.

Assynt, district of Sutherland, in Sld., containing limestone and marble.

Assyria, country of Asia, celebrated in ancient history. It comprehended the provinces in Asia now called Diarbec, Kurdistan, and Iraq.

Astabad, town of Armenia, 3 ms. from the river Aras, and 12 S. of Naksivan. Lon. $45^{\circ} 30'$ E. lat. $38^{\circ} 28'$ N.

Asti, ancient episcopal town of Italy, in Montserrat. It is seated on the Tanaro, 22 ms. E. of Turin. Lon. $8^{\circ} 8'$ E. lat. $43^{\circ} 3'$ N.

Astorga, very ancient city of Spain, in Leon, well fortified by art and nature, seated in a pleasant plain, 25 ms. SW. of Leon. Lon. $6^{\circ} 32'$ W. lat. $42^{\circ} 22'$ N.

Astrabad, large town of Persia, capital of a province of the same name, on the Caspian Sea, 200 ms. N. of Ispahan. Lon. $55^{\circ} 33'$ E. lat. $36^{\circ} 30'$ N.

Astracan, (the Ghinterkan of the middle ages) episcopal city, of the Russian empire, capital of a province of the same name. It is large and populous, has a good harbour, and is surrounded by strong walls. The river Volga, on which it stands, overflows like the Nile; and when the water is run off, the grass grows with much rapidity. The city of Astracan is about $2\frac{1}{2}$ ms. in circumference, surrounded by a brick wall, which is now in a ruinous condition; but, if we comprehend the suburbs, the circuit will be near 5 ms. The number of inhabitants amounts to 70,000, including Armenians and Tartars, as well as a few Persians and Indians. All round the city, at the distance of 2 ms. are seen a great number of gardens and orchards. This city is supposed to have been, in early times, the general staple for the productions of Persia,

India, and Arabia. It is seated on an island formed by the Volga, 40 ms. NW. of the Caspian Sea. Lon. $47^{\circ} 40'$ E. lat. $46^{\circ} 22'$ N.

Asturias, province of Spain, 120 ms. in length, and 45 in breadth, bounded on the E. by Biscay, on the S. by Old Castile and Leon, on the W. by Galicia, and on the N. by the Atlantic. It is divided into two parts, *Asturia d'Oviedo*, and *Asturia de Santillana*. This province is full of mountains and forests, and its wine and horses are excellent. It has mines of gold, lapis lazuli, and vermillion, and belongs to the eldest son of the king of Spain, who is styled prince of Asturias.

Ayllum, tp. of Lusarne city, Perin. on the SW. side of Susquehannah river, 67 ms. NW. of Wilkes Barre.

Atacama, harbour of S. America, in Peru. There is a great desert of the same name, extending along the Pacific Ocean from S. lat. 22° to 26° , and inland to the foot of the Andes. Lon. 70° W. lat. 22° S.

Atacapas, a considerable settlement in lower Louisiana, lying west of the Atchafalaya river; being bounded by that river E., by Opelousas N. and NW. and by the gulf of Mexico S. It is divided into the parishes of St. Martin's and St. Mary's, which see.

Atalanda, town of Portugal, in Estramadôra, seated on an eminence, with a strong fortress, 25 ms. S. of Tomar. Lon. $7^{\circ} 56'$ W. lat. $39^{\circ} 25'$ N.

Atchafalaya River, may be strictly called the continuation of Red River; it is only 114 chains along the right bank of the Mississippi, from the ingress of Red River to the egress of Atchafalaya, the latter may therefore be considered as leaving the Mississippi exactly on lat. 31° N. It is only at high floods, however, when any great quantity of water leaves the Mississippi by Atchafalaya; when the former is at a moderately low stage, the current into the latter ceases. The Atchafalaya, below its efflux, continues SW. about 2 ms. where it assumes a south course, which continues, with a small deviation to the east, 50 ms. in a direct line. The river then turns SE. 10 ms. and again E. 25 ms. to its junction with Plaquemine from the Mississippi. Below the Plaquemine the Atchafalaya reassumes a south course of 60 ms. falls into the gulf of Mexico, having an entire length of 147 ms. A few spots of land sufficiently high for cultivation are found on the left bank of the Atchafalaya, near its efflux from the Mississippi; those, however, soon cease, and both banks are generally liable to inundation. A very heavy forest covers both shores of this river, until within a few ms. of its mouth. Twenty-six ms. below its efflux commences the great raft. This singular phenomenon, about which so much mistake and speculation has been made, was measured by the writer of this article; the following is the fruit of his observations on the subject. From the course of that particular bend of the Mississippi, out of which the Atchafalaya issues, the drift timber of the former is thrown into the latter. In 1773, this drift timber passed into the Atchafalaya, in such quantity as to form a compact mass, too large to pass down with the current, and therefore choked and became settled. Other accessions have

annually augmented the original body, and now form rafts of more or less extent, for about 25 ms. along the river. It is a very erroneous, though a common opinion, that the raft is sufficiently compact to admit the passage of horses, and that trees are formed upon it: both these statements are entirely unfounded. It is with considerable difficulty and danger, that a man can cross the river on the timber; the body of which rises and falls with the water of the river, and at all seasons maintains an equal elevation above the surface. The raft is in fact subject to continual change of position, to which superadding its recent formation, renders either the solidity of its structure, or the growth of large timber impossible. Some small willows and other aquatic bushes, are frequently seen amongst the drift wood, but are too frequently destroyed by the shifting of the mass to acquire any considerable size. The distance between the extremities of the raft is, as stated, about 25 ms. but of this space not more than 10 ms. is impeded by raft. The width of the river is about 220 yards. If we allow the timber to be 8 feet deep, 10 ms. by 220 yards, will yield 2,240,500 solid cords.

The first stream of consequence which enters Atchafalaya, is the Courtableau, which comes in from the NW. half a mile above the lower raft. (See *Courtableau*.) Around the mouth of Courtableau is one wide overflow. Towards Opelousas and Atacapas this drowned tract reaches to or 9 ms. in a direct line from the Atchafalaya. The intermediate space at high water is a lake. The currents of the smaller bayous are lost in the maze, and only remain distinguishable by the openings of their channels. The many lakes that mingle with the outlets of the river, and with each other, render this region in an extraordinary manner intricate. Below Courtableau many outlets leave the Atchafalaya, which flow into lake Chetimaches, and whose waters again enter the main stream by the outlet of that lake. From Courtableau to the Cow Island is SE. 25 ms. in a direct line. Here the river turns east. So numerous are the outlets between Courtableau and Cow Island, that the current of the Atchafalaya passes by them into lake Chetimaches, and therefore from Cow Island to the Plaquemine, the volume of the former river is nearly stagnant. The river here winds diagonally over an inclined plane, and when the swell of the waters rise above the banks, the water naturally flows down the direct slope, and consequently, when the river assumes an eastern course, the current at high water is at right angles to the river. Within a short distance below Cow Island, there is a very narrow selvage of high land commencing on the right shore, which continues to the entrance of the Plaquemine but cut by 20 or 30 outlets, great and small. In this eastern course of Atchafalaya, the light coloured water of Mississippi disappears, and the stream assumes the dark green tinge of the waters of the swamps. This change is effected by a bayou, whose banks are in general above overflow, and which comes in from towards Taussie Riviere, and flowing SW. carries the Mississippi waters towards Cow Island.

Where the Atchafalaya and Plaquemine form their junction, the united stream assumes a S.

course, which it maintains to the gulf of Mexico, the distance by a meridian line 54 ms., or about 70 ms. pursuing the river. A summary of all the distances gives the whole length of the Atchafalaya, by comparative course, 133 ms. and along the stream 193 ms.

A particular description of this river below Plaquemine would be mere repetition. It is sufficiently explicit to observe that 10 ms. below Plaquemine another small raft impedes the navigation, boats being obliged to be taken by an outlet through lake Natchez, and thence again into the main stream below. The Atchafalaya passes through lake Chetimaches, and 3 ms. farther down contracts again into a river of about 240 yards wide, receives the Teche, 5 or 6 ms. below which timber ceases, and the level grassy sea marsh reaches the banks, and continues with the Atchafalaya to its mouth. The only spots of valuable arable land on the entire banks of Atchafalaya in all its course, is near the mouth of Teche, and the opposite bank, a few ms. below, at Rice's Island. See *Teche*, and *Rice's Island*.

The tide flows up the Atchafalaya, when the Mississippi is low, as high as the great raft, and at other seasons in proportion to the height of the streams in the interior.

Atchafalaya Bay, at the mouth of Atchafalaya river, on the coast of Lou. about 30 ms. long from S.E. to N.W., and 20 ms. wide. A long bar from Point Chevreuil to Point au Fer, on which, at common tides, there is about 9 feet water, prevents vessels above that draft from entering, though the depth within and up the Atchafalaya, to the mouth of Teche, would admit vessels of any assignable tonnage.

Athens, now called *Setines*, once a celebrated city, the capital of ancient Attica, but now of Livadia, in European Turkey. After many revolutions, the Turks finally wrested it from the Venetians; and it has now not more than 10,000 inhabitants, of whom three-fourths are Christians of the Greek church; the remainder Turks. It is the see of an archbishop, and is defended by a citadel on the summit of a lofty rock. The town stands beneath the citadel; not encompassing the rock as formerly, but spreading into the plain to the W. and NW. Some masses of brick-work, standing separate without the town, belonged, perhaps, to the ancient wall, of which other traces also appear. The houses are mostly mean and straggling. In the lanes, the high walls on each side, which are commonly white-washed, reflect strongly the light of the sun. The streets were very irregular, and, anciently, were neither uniform nor handsome. There are many magnificent ruins, which testify its

former grandeur. It is situated on the gulf of Engia, 100 ms. NE. of Lacedemon, and 320 S. by W. of Constantinople. Lon. $23^{\circ} 57'$ E. lat. $38^{\circ} 56'$ N.

Hobhouse says, "He who, at this day, (1809) surveys the hill of the Acropolis, (the citadel of Athens,) has the view of a site which has been covered with the habitations of men, and has maintained, probably without intermission, a pop. of 8000 or 10,000 souls for more than 30 centuries; a fortune to which no other spot, that I know of, in the world, can justly pretend; and which a view of its revolutions and disasters must render still more surprising."

Atlantic or *Atlantick Ocean*, takes its name from mount Atlas in Africa, and lies between the W continents of Africa and Europe, and the E continent of America. Its least breadth, from Guinea, in Africa, to Brasil, in S America, is 2300 ms. On the side of the equator, it is called the N Atlantic Ocean, and on the other, the S Atlantic Ocean.

The Atlantic Ocean is remarkable, as being the only large aquatic opening between the polar extremities of the earth. By reference to the muscles *Bilue*, *Fath*, and *Lafre*, will be seen in what manner the climates of the opposing shores of the Atlantic are influenced by its position, extent and position.

Atlas, chief of high mountains in Africa, putting Barbary from the N. E. to the S. W. inhabited almost in every place, except where the extreme cold will not permit. The highest summit of this chain, is estimated at about 12,000 feet above the surface of the Atlantic Ocean.

Attica, bay, on the S side of the Ottawa river, at the mouth of the river of the same name.

Attica, river of U C, a branch of the Ottawa river.

Attica, a peninsula of Greece, and in many respects one of the most interesting regions of the earth. In ancient times, Attica was bounded N by the Asopus, which separated it from Boeotia, NW by Megaris, SW by the Saronic Gulf, and SE and E by the straits of Plocea. It forms an irregular triangle, base on the Saronic Gulf and Megaris 50 ms, and altitude from the Megaris to the mouth of the Asopus 30 ms. Including the island of Salamis and cape Rhanius E from Marathon, the whole of Attica must have fallen short of 200 sqms. This is far below the mean extent of a cty of the U S, particularly along the Atlantic slope. The surface of Attica is broken, and much of it occupied by comparatively low mountains. In the northern part spreads the rugged track of Citharon, and its extremities Parnes. From the Citharon again branches another chain, which under the local names of Brilessus, Pentheus, Imitus, and Lamus, reached the southern extremity of Attica at cape Sunium. The intervening valleys in the island of Salamis afforded the only soil, which from a careful inspection of the features of the country, cannot exceed twelfth of the whole area, or 1/4 sqm. The very limited area ancient Attica, following the lowest estimate, possessed a pop of 84,000 or upwards of 1000 to the arable sqm. This must appear excessive, and yet we have the evidence of history to warrant the conclusion that at the period of the Peloponnesian war, little more than 1 centuries before our era, this little territory must have contained more than 100,000 inhabitants.

According to the best modern accounts, Attica, including Athens, has now a pop of about 25,000. This, although very trifling, when compared with the ancient state of society in that country, is yet far above what is generally considered as the mean population of Greece. Attica, or rather the territory of Athens, is now restricted to within Citharon, and does not exceed 150 sqms, consequently, it contains a pop of 180 to the sqm. Before the late revolution in Greece, Attica was subject to the Kaiser Aga at Constantinople, and ruled by a Wajrode. See Greece.

Atre, river of Colombia, falling into the Gulf of Darien. It rises in Choco, and flows N about 250 ms.

The principal mouth of the great river Atrato is called Barbacoa, situated in 8° 12' N;

nat. This river meanders through a beautiful country a distance of about 530 ms. following the stream. Its banks are, in general, steep and high, clothed with perpetual verdure and majestic forests, of which the lofty cedar is the most common tree.

At the mouth of this river we have the great bay of Candelaria, capable of containing all the fleets of Europe; the anchorage excellent in 15 to 20 fathoms. Nearly all the bay is completely sheltered, and the most violent northern gales of wind scarcely ruffle the harbour. In fact, there is no bay within the tropics as spacious and safe as Candelaria.

The bar of the river Atrato at the lowest tides has 5 feet, but generally $8\frac{1}{2}$ feet; the entrance is about 200 yards in length, and perfectly safe for vessels of the above mentioned draught.

The first river of any magnitude which discharges itself into the Atrato, is called Succo (turbid or muddy,) distant from the bar about 70 ms., in lat. $7^{\circ} 46' N.$ This river may be of consequence as the country advances in settlements, but at present it is full of floating timber and other impediments.

The second river tributary to the Atrato is called Marindo, about 150 ms. from the mouth of the former. About 20 leagues below its entrance into the Atrato, there are the high mountains called Marindo, remarkable for the magnificence of their forests of cedar and other durable woods.

The third river, called Napipi, discharges itself into the Atrato, in lat. $6^{\circ} 33' N.$ This river becomes worthy of particular notice, because it is the best channel through which the communication may be opened between the two seas. From its source, or rather from the spot to which a steam boat could navigate, the distance by land to the Pacific Ocean is only 6 ms. The Indians of the country take a bale of goods across this portage weighing 5 arrobas, or 125 pounds, for 1 dollar. These goods are carried to a safe bay on the Pacific, from whence they are taken in canoes to various places.

From the entrance of the Napipi into the Atrato, to a place called Tambo de don Carlos, is about 100 ms., and is usually performed in three days, but a steam-boat could do it in 12 or 14 hours. From Tambo to Antado is 15 ms. and from the latter place to the great bay of Cupica, in the Pacific Ocean, is about 12 or 14 ms.; and the Indians frequently perform two journeys there in the same day. Loads of goods may be taken from Antado to Cupica either by mules or men, but the latter is most common, more especially as commerce by that route is yet in a state of infancy.

The fourth river, called Babara, discharges itself into the Atrato, in lat. $6^{\circ} 21' N.$ About 15 ms. from its mouth, is a warehouse, where goods are usually deposited, when destined for Antioquia. From this warehouse to a place called Urrao, is about 60 ms. land carriage; and, as the goods are usually taken by men and the roads difficult, they are usually 7 days in performing the journey. The cost is about \$12 for 125 pounds weight. From Urrao to Antioquia is about 40 ms. The latter distance is

usually performed by mules, at a charge of \$4 a load.

These facts are stated to show that, by the route of the Atrato, there can be easily opened a great intercourse with the valuable province of Antioquia, instead of the present route by the river Magdalena, and consequently add to the importance of the former river.

The Atrato runs through the province called Citara, and the capital is frequently called by that name, but its proper name is the city of San Francisco de Quibido; it contains about 2000 inhabitants, the air pure, and the heat much less than in the Antilles. The distance from the mouth of the Atrato to Quibido is about 410 ms. by water. From thence to its source about 80 ms. Boats or vessels drawing 7 feet water may go to Quibido, and 5 feet may be carried to the aforementioned Tambo de San Pablo. The rate of the current is generally about two ms. per hour, and, even during the highest freshes, the current is much less rapid than the Mississippi and other rivers of the U. S., of course not the least doubt exists that steam boats of large burden may navigate from the mouth of the Atrato to the Tambo of San Carlos: this latter place is situated on a narrow tongue of land, about four and a half ms. wide, in the province called Mota. On the other side of this narrow isthmus we find the river San Juan, which unites with a river called Calima, and descends to the port or bay of Chorambara, in the Pacific Ocean.

It is therefore unquestionable, that by cutting a canal of a few miles, from Tambo de San Carlos to the river San Juan, a water communication can be opened from the Atlantic to the Pacific, and it is likewise certain that a canal may be cut from Antado to the bay of Cupica; future surveys will establish which of these routes may be best."

The foregoing information is drawn from Wm. D. Robinson, and by that gentlemen credited to a Mr. Kirkland. The distances given must be taken with great allowance, as the entire length of the Atrato, by comparative courses, but little exceeds 200 ms. It is, in fact, a river of great importance, rather from its position than from its magnitude.

Augustine, St. city of the U. S. in Flor. N. lat. $29^{\circ} 58'$, lon. W. C. $4^{\circ} 50'$ W.

This town is situated on the eastern coast of Flor. It is built in a prairie on the sea shore, surrounded by walls and a dry ditch on the land side. It is defended on the N. by a fort of 4 stations, called the Fort of St. Jean, built of stone, with a parapet 9 feet thick and a rampart 20 feet high, with bomb proof casemates and ways, and is lined with more than 50 pieces of artillery. Upon the sea shore, S. of the town, stands another small fort connected with the walls of the town. This fort defends the harbour, which is good, safe, and commodious, with a depth of water of not less than from 24 to 30 feet of low tide. This harbour is covered from the sea side by a long and low island, called the Island of St. Anastas. It is separated from the main land by a branch of the sea called the river Matanze.

Should a vessel, after leaving the Bahama Channel, be obliged, in consequence of some accident, or any particular reason, to stand in for an harbour, the port of St. Augustine is the nearest and most advantageous place.

The entrance is covered outside by sand banks and rocks, extending out more than one-third of a league, between which there are openings or passes, which form the channels leading to the interior of the harbour. The S. channel is the one vessels generally make use of. There is not less than from 20, 25, to 30 feet water at low tide; but before you enter this channel, you have to pass a bar, over which there is not more than 9 feet water at low tide. You can moor your ship outside of the bar, and wait till the tide comes in. This pass can easily be distinguished by the breakers of the sea, which beat against the rocks on the banks S. and N., and thereby plainly mark out the passage, which is at least 300 fathoms wide. After passing the bar you find from 18 to 20 feet water. You will range along the island of Annastasiu within 2 cable lengths; you may cast anchor near the NE. point, opposite a battery, in 26 feet water, at the distance of one cable length and an half from the land. You double the N. point of the island, and then come to anchor before the town. N. and S. of the town there are 2 great Indian villages, which form the suburbs the reef. Half a league from the town, on the N. side, is a small fort, called the Fort Negro, situated on a flat and level ground, at a little distance from the northern shore of the river St. Marks, with a branch communicating with the river St. Jean, towards the mouth, in the Atlantic Ocean. These passes and entrance to the harbour are very advantageously situated, for all the vessels coming from Mexico, Lou, and the Havanna, are obliged to pass through the Bahama channel, at a short distance from St. Augustine, the port of which can be made with ease, and where you will find assistance and relief—*Nat. This table exhibits the heterogeneous composition, and vast magnitude of Austria, amongst the states of Europe. Occupying the middle basin of the Danube, and the north of Italy, this empire possesses the most fertile regions in Europe. The mountainous chains of Bohemia, Hungary, Poland, and the Alpine tracts, towards Turkey and Italy, abound in metals and minerals, to such vast extent, that Austria is justly considered as the most productive metallic region of not only Europe, but of the eastern continent; and, by a singular fortune, the salt mines of Wieliczka in Poland, fell to Austria. The entire area now under the Austrian sceptre, amounts to about 268,000 sqms. From the extreme eastern angle of Transylvania, to the eastern boundary of Sardinia, in a direction nearly E. and W., Austria extends 900 ms., and in breadth from Croatia to the northern part of Bohemia, 450 ms. The empire generally, lies between 45° and 50° N. lat.

Austria is commonly considered as a Germanic state; but it is evident, that if the far greater part of its inhabitants are taken into view, it is much more Hungarian, and even more Italian than German. The Roman Catholic is the prevailing religion, though other sects exist partially, and are permitted rather than tolerated, to exercise their rites in the empire of Austria. See *Arch-Duchy of Austria, and Earth*.

Austria, in German, *Österreich*, *Eastern kingdom*, the original centre around which the empire of that name has been formed. It is an Arch-Ducal province, along both banks of the Danube, and sub-divided into Upper Austria and Lower Austria, separated by the river Enns. It is about 140 miles long, and with a mean width of 70 broad, containing 9800 sqms. One third of this extent consists of mountains, forests, lakes, and pasture grounds. It is bounded by Slavaria W., Stiria S., Hungary E., and Bohemia and Moravia on the N.

UPPER AUSTRIA.

| | |
|-----------------|--------|
| Linz, or Lintz, | 18,000 |
| Enns, | 4,400 |

The climate of Austria may be safely assumed as a scale by which to estimate that of central Europe. It lies from N. lat. 47° 20' to 48° 57'. Linz, the most westerly city, is about 1000 feet above the level of the Black Sea; and Hainburg near Presburg, the most eastern, is 780 feet above the same level. On the banks of the Danube and the lower country, the heat is excessive in summer, and cold extreme in winter. Fahrenheit's thermometer frequently rising to 98°, and sinking below zero. The changes are rapid and severe. On the 25th of Aug. 1805, Fahrenheit's thermometer, at 11 in the afternoon, stood at 97°, and at three on the ensuing morning, was down to 54°, at Vienna.

Austria is limited N. by the mountains of Bohemia, and S. by those of Styria. The whole country is uneven, the valleys productive of grain and fruits. The mean temperature of springs and deep wells at Vienna, from 44 to 46° of Fahrenheit. The air is considered healthy, though the winters are long, and liable to great vicissitudes. Agriculture generally commences in the latter part of March, and winter sets in about the beginning of Nov.

The rivers of Austria are, the Danube, which rolls its great volume through the whole duchy, and receives from the N. the Moravia, and the Kamp; and from the S. the Enns, Traun, Ips, and Tracon. There are a few lakes, but none of sufficient note to demand particular attention.

Antaugu, city of Al., having Alabama river, or Montgomery SE. and S., Dallas SW., Cahaba W., Shelby N. and Coosa river, NE. It is about 43 by 18 ms., area 774; surface hilly, and soil varied in quality from first rate along the streams to extremely sterile ridges. Staples cotton. Pop. 1820, 3853. Chief town, Washington. Baikal, great lake in Siberia, in the province of Irkutsk, 220 ms. long, and 80 broad. The Baikal, is, out of N. A., the most extensive collection of fresh water known. Like the higher lakes of the Canadian sea, the Baikal is comparatively excessively deep, and appears as an immense cavern of basin in the mountains of central Asia. Its range is from SW. to NE., about 200 ms. long, with a mean width of 40. It is in relative Geographic position and extent very similar to lake Erie. The Angara river is discharged into the NE. angle of the Baikal, which also receives into its SW. extremity a stream of far greater magnitude, the Selenga. The latter is formed by numerous branches issuing from the Altai mountains, which, uniting after a comparative course of 500 ms. falls into the Baikal, from which the vast mass of water is again discharged by the Angara. The outlet of the Baikal seems to have been rifted through the mountains, and presents a scene of terrific grandeur. The channel is about a mile wide, interspersed with rugged fragments of rock, over which the immense cataract is poured with appalling velocity. In grandeur, sublimity, and magnitude, the passage of the Angara from the Baikal is not, it is probable, equalled by any other scene on the Eastern continent.

The water of this inland sea is extremely limpid, and in the abundance of seals along its shores, affords a very remarkable anomaly in animal life; this being the only region of the earth, where these creatures are found at any considerable distance from salt water. The existence of the seal in the Baikal, is one among many proofs of a gradual recession of the oceanic mass. The Baikal lies between the parallels of 51° and $55^{\circ} N.$ lat. Its shores exhibit a congeries of mountains.

Baikal Mountains.—These rugged ridges are evidently a part of the vast system of the Altai, and extend from SW. to NE., nearly parallel to the Baikal sea; W. of which commences an immense marshy steppe or plain, which spreads towards the S. over the sources of the Janissey. On all other sides the mountains rise to a great height; some peaks reaching the region of perpetual snow. They are composed partly of granite, and partly of silicious breccia and Limestone. Coal is found amongst their lower valleys.

Ballston Springs, or **Ballstown Spa**, pstv. Saratoga cty. N. Y., remarkable as being the site of very celebrated mineral springs. These waters are within the precincts of the town, and are eminent for their medicinal virtues. There are several bathing houses erected, and the accommodations for visitors are very convenient, and splendid. The number of visitants is considerable; in 1821, they amounted to near 3000.

Ballstown, pstv. Saratoga cty., about 4 ms. from Ballstown Spa. Persons directing letters to either of these places, ought to be very careful to designate which, as they are frequently confounded, and each possesses its own post office.

Baltzville, pstv. Powhatan cty. Virg.

Baltic, large sea between Denmark and Sweden to the W., and Germany, Poland, and Russia to the E., from which run the Gulfs of Bothnia, Finland, Riga, and Dantzic. It is remarkable that this sea neither ebbs nor flows, and its current always sets through the sound into the Ocean. Yellow amber is found on the coast.

The Baltic is the Venedicus Sinus of Ptolemy, the Mare Suevicum of Tacitus, and the Sinus Codanus of Pliny. In the countries contiguous to its shores, its ancient name was Variatzkoié Moré; in Russia, it's Baltiskoié Moré; and in Swedish, Oster sjö.

There are many very important particulars relating to the Baltic, which demand a much more ample description than is contained in the original article. This great inland sea commences with the narrow strait between Elsinour in Denmark, and Helsingborg in Sweden. The depth of water is 10 fathoms directly opposite the castle of Cronenburg. This strait is particularly called, The Sound. The Baltic is again connected with the Cattegat, by the Great Belt, between the islands of Zealand and Funen, and by the Little Belt, between Funen and Jutland. Of these passes, the Sound is the most frequented, most direct, and deepest channel; it, however, shallows within Cronenburg so much, that about 10 ms. SE. from Copenhagen it contains but 4 fathoms. Within the bar, it again deepens, and gradually spreading, between Germany on the S., Russia, E., and Sweden W., presents a sheet of water from 10 to 150 ms. wide, and 200 in length. This is the southern Baltic, from which turns, almost at right angles, its northern extension between Sweden and Russia. The latter, in its northern part, the Gulf of Bothnia, reaches above N. lat. 65° . From the northern Baltic are protruded, eastward, the Gulfs of Riga and Finland. Into the former is discharged the Dwina, the latter receives the Neva. From the southern mouth of the Little Belt, to that of the Vistula, is 400 ms. the Oder entering about midway. From the mouth of the Vistula to that of the Tornea, 800 ms. Thus the entire length of the Baltic, curving from Jutland to the head of the Gulf of Bothnia, is 1200 ms. The average width about 120 ms., including all its gulfs. This yields an area of 150,000 sqms. The mean depth of the Baltic does not exceed 50 fathoms, and near any of its shores, it falls far short of that depth. The water is merely brackish, and does not contain more than one-thirtieth part of salt, (*miriate of soda*.) This sea has no tide.

The Baltic, and its gulfs, as recipients, receive from Germany, the Oder; from Prussia, the Vistula; from Russia, the Memel, Dwina, Narova, Neva, Rymen, Kume, and Ulea; and from Sweden, the Tornea, Kalix, Lulea, Pithea, Skillisteä, Umea, Windel, Angerman, Indal, and Westerdahl, with the outlets of the Maelar, and Wetter lakes. Within this range are included, in Germany, great part of Holstein, Mecklenburgh, and Brandenburg; all Pomerania, Lusatia, and Silesia; in Poland, all Polish Prussia, and part of Austrian Poland; in Russia, all Cowland, Riga, Revel, Pakov, Polotsk, St. Petersburg, Viburg, Finland, and part of Russian

Poland, Smolensk, Novogorod, Olonetz, and Russian Lapland. In Sweden, Tornea, Lulea, Pitea, Bothnia, Norland, Sweden Proper, and Gothland. In the Baltic are the islands of Zealand, Funen, Langeland, Falster, Laland, Femer, Rugen, Bornholm, Oland, Gothland, Oesel, Dago, and Aland. Upon the Baltic basin exist more than 20,000,000 inhabitants. This mass exceeds one half the human species above N. lat. 50°. This circumstance is altogether the most important in comparative Geography. Here we find numerous and highly civilized nations, in latitudes which in America and Asia, are exposed to almost continual winter. This remarkable region extends from the source of the Oder, N. lat. 49° to those of the Tornea, 68°, through 19° of lat. 1,300 ms. From W. to E. 700 ms. from the Dofrine mountains to the eastern confluent of the Onega lake. The mean width about 700, giving an area of 900,000 sqms. Exclusive of the Baltic and lakes Ladoga, Onega, and other water surfaces, the habitable superficies of the basin of the Baltic is very nearly 700,000 sqms.

The subsidence of the water of the Baltic, remained long a contested subject, but appears to be now registered amongst the authenticated facts in Physical Geography. The following extract from the Mechanics Magazine, Glasgow, in Scotland, appeared in the Nat. Int. Sept. 1825 --

"A singular and interesting fact has been ascertained, respecting the level of the Baltic. It was suggested that the waters of this Sea are gradually sinking; but a Memoir in the Swedish Transactions, for 1823, has put the change beyond question. From lat. 56° to 63°, the observations show a mean fall of 1½ foot in 10 years; ¾-10 of an inch annually; or 3 feet 10 inches in a century. The Baltic is very shallow at present, and if the waters continue to sink as they have done, Revel, Abo, and a hundred other ports, will by-and-by, become inland towns; the Gulfs of Bothnia and Finland, and ultimately the Baltic itself, will be changed into dry land." See *Earth*.

Baltimore, Arw, tp. Green cy. N. Y. Pop. 1820, 2036.

Baltimore, town of Ireland, in the cy. of Cork, seated on a headland which runs into the sea, 9 ms. NE. of Cape Clear. Lon. 9° 14' W. lat. 51° 24' N.

Baltimore, cy. Md., having Anne Arundel SW., Frederick NW., York cy. in Penn. N., Hartford E., and the bay of Chesapeake SE. It is about 30 ms. in length, and 25 mean width, area 750 sqms. The face of the country is very pleasantly diversified by hill and dale, and is well wooded and watered. The soil is good for grazing, for the cultivation of small grain, and for orchards. Chief town Baltimore. Ctl. lat. 39° 30' N. lon. W. C. 0° 30' E. Pop. 1220, 33,354, exclusive of the city.

Baltimore, city and port of entry, Baltimore cy. Md., situated on the N. side of the Patapsco river, 14 ms. above North Point, 38 NE. from Washington, and 100 SW. from Philadelphia. Lat. 39° 17' N. lon. W. C. 0° 27' E.

This city is built at the head of a bay, which extends from the Patapsco river. Its harbour is spacious and convenient. Below the city

the bay narrows to a very confined strait, which is amply commanded by Fort M'Henry. Jones' Falls creek divides the city and harbour into 2 sections. The lower part of the city is called Fells Point, to which vessels of 600 tons can ascend; but the water shallows so rapidly, that at the city the depth is insufficient for any of heavier draught than 200. Baltimore is extremely well situated for commercial connexions with the valley of Ohio; it commands the trade of Md., more than one half of that of Penn., and a part of N. Y. Having the advantage of climate, the harbour of Baltimore is not so liable to obstruction from ice as that of Philadelphia. Its relative amount of shipping places it the third in rank in the U. States.

The edifices necessary for the transaction of judicial and commercial business are splendid and convenient, whilst the interests of science and elegant amusements, have met their due share of encouragement. The city contains a state penitentiary, alms-house, a court-house, and jail, a custom-house, an exchange, a museum, theatre, and hospital. Besides the foregoing, there are in this city 3 market houses, 10 banks, and upwards of 30 places of public worship. Washington's monument, erected of marble at the N. end of Charles street, on an elevated spot, will be when completed, a very sublime production of art. It is intended to be 163 feet in height, exclusive of the statue of Washington, which is to crown the edifice. The monument erected to the memory of the men who fell in defence of the city, on the 12th and 13th of September, 1814, is a handsome structure in N. Calvert street.

The literary institutions of this city are respectable. In 1807 a medical college was founded, which subsequently received the title of the University of Maryland, and embraces the ordinary pursuits connected with such an institution. St. Mary's college possesses a fine library, with a chemical and philosophical apparatus, and is supported by about 150 students. Baltimore college has about 50 students.

The increase of Baltimore has been fully commensurate with the advantages of its local position. In 1790 it contained 13,503 inhabitants, and in 1800, 26,514. The following table exhibits its subsequent advance.

Bamiyan, ancient city of Asia, situated in the mountains of Hindoo Kho. N. lat. $34^{\circ} 20'$, E. lon. 67° ; 250 ms. NW. by W. from Attock. This is the sacred place, the Jerusalem of the sect of Buddh. In Sanscrit it is called *Vam-nagari*, or *Vamigran*, and is a derivation from *Vamyan*; "The most beautiful and excellent city." This interesting scene of ruin lies between Cabul and Bahlac, distant about 150 ms. from the former. It is represented in the books of the Buddhists as the seat of purity. They contend that it was built by the patriarch Shem, for whom they sometimes call it *Shem-Bamiyan*. This patriarch they suppose to have been an incarnation of *Vichnou*, an opinion in which they are followed by the Bramins.

Every appearance in and around Bamiyan, corresponds to support the veracity of Hindoo literature. An air of extreme antiquity appears on all sides. Colossal statues, massy walls, and immense palaces, those monuments of a primitive age, are spread over the now desolate space. Bamiyan, and Bahlac, or Balk, are often confounded by Persian authors, who call the first Balk-Bamiyan, and the second Balk-Bachara. Through the district of Bamiyan, flows a pleasant though scanty stream, which rises in the adjacent hills, and falls into a lake from which issue 4 rivers, the Hirmend, the Landhi-Sindh, the rivers of Bahlac, and Conduz. See Brewster's Ency. Art. *Bamiyan*.

• **Baraba**, see *Barraba*.

Barataria, bay of Louisiana; it is the entrance from the sea to a chain of lakes and small bayous, reaching to the Mississippi at the city of New Orleans. Boats and canoes can pass from the river at several points, and penetrate to Barataria bay. The adjacent country is an open flat sea marsh.

Bar, or *Barrade*, late dutchy of France, lying on both sides of the Meuse, between Lorraine and Champagne. It now forms the department of Meuse.

Barbados, the easternmost of the Windward Islands in the West Indies, 25 ms. in length and 15 in breadth. It belongs to the English and the number of the whites is about 20,000 who have 100,000 slaves. Their exports are sugar, rum, cotton, indigo, and ginger; and they have most of the fruits common to the climate. The sugar exported hence is whiter and finer than of any other plantation; and they have one particular production, called Barba, does tar, which rises out of the earth, and swims upon the surface of the water. This Island has suffered much from hurricanes; particularly from a dreadful one, Oct. 10, 1780. It is 70 ms. E. of St. Vincent. The capital is Bridgetown.

Barbary, country of Africa, between the Atlantic ocean, the Mediterranean sea, and Egypt, containing the countries of Barca, Tripoli, Tunis, Algiers, Fez, and Morocco. It was known to the ancients by the names of Mauritania, Numidia, Proper Africa, and Lybia. In its most enlarged sense this term designates all that part of Africa N. from Mount Atlas. If the eastern limit is considered to be the Gulf of Sidra, Barbary is about 1,500 ms. from W. to E. with a mean width of 150, and embracing an area of 225,000 sqms. If the opposite slope of the Atlas towards the Sahara is included, the superficies would be fully doubled. With the Mediterranean N., and the burning deserts S., winter is a limited season in Barbary, and it is no doubt that region of the earth least subject to the violent vicissitudes of temperature, and

between the Oby and Irish rivers, in Asiatic Russia. This vast plain extends in fact, from the Baikal sea, and Angara river, extending N. from the Altaian mountains: but the steppe of Barraba is limited on the SE., by the river of Tomsk, and extends from SE. to NW., from Cayansk to Samarov, or rather from Kolyvane to Samarov, nearly 700 ms., with a mean width of 300 ms.; extending over about 200,000 sqms. It is one vast undeviating plain, over which are interspersed open meadows, and fresh and saline lakes. Though lying between 55° and 61°, the climate is mild, and the soil being an alluvial deposit is very productive.

Barrauc, fortress of Dauphiny, France, at the entrance of the valley of Gresivaudan, built by a duke of Savoy in 1597. It is seated on the Isere, 6 ms. S. of Chamberry. Lon. 5° 52' E. lat. 45° 29' N.

Basel, or **Basle**, canton of Switzerland, 24 ms. long and 21 broad; bounded on the N. by Brigau; E. by the Forest towns; S. by the canton of Soleure, and W. by the bishopric of Basel and France. It contains about 35,000 inhabitants, and is of the Calvinist religion.

Basel, bishopric in the NW. part of Switzerland; bounded on the E. by the canton of Basel; S. by that of Soleure, and W. and N. by France.

Basel, the capital of the canton of the same name, and the largest town in Switzerland. It is surrounded by thick walls, flanked by towers and bastions; and is divided into two parts by the Rhine, which communicate by a handsome bridge. The largest part is on the side of Switzerland, and the least on that of Germany. The larger has five gates, six suburbs, numerous streets and fountains, and is partly seated on a hill: the other stands on a plain, and has but two gates, with several streets and fountains. Under a marble tomb in the principal church is interred the great Erasmus. The university, founded in 1459, has a fine library, and a rich cabinet of medals. Basel has several manufactures, particularly of paper, ribands, and cottons; and it carries on an extensive trade. Three treaties of peace were concluded here in one year, 1795, with the French republic; namely, by Prussia, Spain, and Hesse Cassel. Basel is capable of containing 100,000 inhabitants; but the number is scarcely more than 14,000. It is 174 ms. N. by E. of Geneva; and 250 E. by S. of Paris. Lon. 7° 30' E. lat. 47° 35' N.

Bashee, island in the China sea, the most eastern of a cluster called, from this, the Bashee islands, lying to the S. of Formosa. The productions are plantains, bananas, pine-apples, sugar-cane, potatoes, yams, and cotton. The quadrupeds are goats and hogs. Bashee is of a circular form, 6 ms. in diameter, and has a town of the same name. Lon. 121° 50' E. lat. 20° 30' N.

Basilicata, province of Naples, bounded on the N. by Capitanata and Bari, E. by the gulf of Taranta, S. by Calabria Citeriore, and W. by Principato Citeriore and Ulteriore. It has some mountains continually covered with snow; but is fertile in corn, wine, oil, cotton, honey, and saffron. Acerenza is the capital.

Baskirs, or *Bashkirs*, a wandering, or rather Nomadic Tartar nation, who range along the lower part of the Don and Volga rivers, on the confines of Europe and Asia. They seem to be descendants of the Bulgares, and are now subject to Russia.

Basques, late territory of France, which included Lower Navarre, Labourd, and Soule, and now forms, with Bearn, the department of Lower Pyrenees.

Bass, an insulated rock near the coast of Stdk., at the entrance of the Frith of Forth, between the towns of N. Berwick and Dunbar. On the S. side it is almost conic; on the other it overhangs the sea in a tremendous manner. It is inaccessible on all sides except the SW., and there it is with difficulty a man can climb up by the help of a rope or ladder. In May and June it is quite covered with the nests, eggs, and young birds of the gannets, or solan geese. The rock is 1 m. in circumference, and has a rabbit warren, and pasture for a few sheep. A ruinous castle, once the state prison of Stld., stands at the edge of the precipice. The garrison, in 1694, surrendered to king William, and the fortifications were demolished.

Bass Strait, channel about 40 leagues wide, which separates Van Diemen Land from the S. extremity of New Holland. It contains a chain of small islands extending N. and S. It was discovered in 1797 by surgeon Bass. S. lat. 40°, E. lon. 136°.

Bavaria was nearly doubled in extent and population by subsequent augmentations, and is really the most powerful state which can be called truly German, Austria and Prussia being composed of heterogeneous elements. This kingdom is in a peculiar manner intersected by fine navigable streams; as beside the Danube, it is watered by the Inn, Isar, Lech, Nab, and Regen, in Bavaria Proper, and in the Rhenish provinces, by the Rhine. The religion Roman Catholic, though general toleration prevails. Aggregate pop. at present exceeds 4,000,000. Chief cities, Munich, Ingoldstadt, Augsburg, Ratisbon, and Passau. In point of geographical position, Bavaria lies between N. lat. 47° and 50°, and though directly W. from Austria, the latter, from its more depressed level, has a more temperate climate than the former.

Bavaria Proper, late dutchy, and the principal part of the late circle of Bavaria. It is 125

ms. long, and 87 broad, and divided into Upper and Lower Bavaria. Toward the S., the country is mountainous, intersected with forests, lakes, morasses, and pastures; and toward the N., are large plains which produce plenty of corn; there are likewise, many salt works, medicinal springs, and baths, mines of copper, silver, and lead, and quarries of excellent marble. The principal rivers, are the Danube, Inn, Isar, and Nab. The inhabitants are deemed the most zealous catholics in Europe. The capital is Munich.

Bavaria Palatinate of, late dutchy, sometimes called *Nordgau*, from its situation in the N. part of the late circle of Bavaria, and sometimes the Upper Palatinates, distinguish it from the late palatinate of the Rhine, often called the Lower Palatinate. It is very fertile, and watered by the Nab, and several smaller rivers. The capital is Amberg.

Beaver, or Big Beaver, river, Penn. Big Beaver is formed by the Mahoning, Shenango,

Neshanock, and Conequenessing creeks. The Shenango rises in Ashtabula, city, of Ohio, and Crawford of Penn. within 12 ms. from the SE. shore of lake Erie, interlocking sources with those of Grand river, Coneaut, and French creek, and pursuing a nearly S. course over Mercer, receives the Conequenessing from the NE. and entering Beaver city, unites with the Mahoning, and forms Big Beaver.

The Mahoning is, in reality, the main branch, rising in Columbiana, Stark, Trumbull, and Portage cities, Ohio; its course is first nearly N. 30 ms. to near Warren, in Trumbull. Winding to SE. it pursues that course 35 ms., entering Penn. in the SW. angle of Mercer, and joining the Shenango at N. lat. 41° , about two ms. within Beaver city. Below the junction of the Mahoning and Shenango, Big Beaver flows a little E. of S. 20 ms. into Ohio river. Conequenessing is the eastern constituent stream of Beaver, draining the peninsula between the Alleghany, Ohio, Big Beaver, and Shenango rivers.

The valley of Big Beaver is nearly circular, and about 70 ms. diameter; area 3850 sqms. It is worthy of remark, that the general courses are nearly on a direct NW. line; of the Youghiogany, below the mouth of Castleman's river, Montangahela and Ohio, from the mouth of Youghiogany to that of Big Beaver; and the latter and Mahoning, to about three miles above Warren. This range of navigable water is upwards of 150 ms. direct, and from 180 to 200 ms. following the sinuosities of the streams.

Bahar, a county of the Eastern Provinces, bounded by the W by the Great Salt Lake, on the N by Bootan, on the E by Assam and Mecklen, and on the S by the Bay of Bengal. Its greatest extent from W to E is about 70 ms, and from N to S about 60. The country consists of one vast plain of the most fertile soil, which, in common with other parts of the Eastern Provinces, is usually rendered two and, in some parts, even three crops. It is sometimes subject to such extremes of heat as render it fatal to the people. The cause of this is the alluvial nature of the soil, which is covered with mud brought down by the Ganges, and Burmah, for which such quantities of putrescent matter are brought down is indeed the air with the most malignant vapours which water is capable of. By the latter end of July, all the lower part of Burmah, contiguous to the Ganges and the upper part, are overflowed, and present a surface of water more than 100 ms wide. As some of the lands in Burmah would receive damage from such a copious inundation, they must, for this reason, be guarded by strong dikes to resist the waters, and admit only a certain quantity. One particular branch of the Ganges is conducted, for 40 ms, between dikes, and when full, the passengers are obliged to go upon the adjacent country as from an eminence. Its principal products are sugar, silk, fruit, pepper, opium, rice, salt, petre, iron, and lead. It is compared to Egypt for fertility, the Ganges dividing here into several streams, and like the Nile, annually overflowing the country. Burmah has been subject, ever since 1765, to the English India Company. Its annual revenue including that of the British, is now £ 90,000, and its pop is 11,000,000. Calcutta is the capital.

Bethlehem, (*Beth-el-Lahim*), town of Palestine, famous for the birth of Christ. It is seated on the ridge of a hill, running from E. to W., and has a delightful prospect. It is now an inconsiderable place, but much visited by pilgrims. Here is a church yet entire, erected by the famous Helena, in the form of a cross, also a chapel, called the Chapel of the Nativity, where they pretend to show the manger in which Christ was laid; as also another, called the Chapel of Joseph, and a third of the Holy Innocents. A few Greeks reside here. It is 6 ms. S. of Jerusalem. Lon. 25° 25' E. lat. 31° 50' N.

Bethlehem, pst. Northampton cty. Penn. lat. 40° 37' N. lon. W. C. 1° 46' E. The United Brethren were settled here by Count Zinzendorf, in 1741. In 1800, the town contained 543 inhabitants, and the tp. 1343. In 1810, the tp. contained 1456, and in 1820, 1860 inhabitants, principally of the same sect. The buildings are not remarkable for grandeur or elegance, but are generally comfortable. They have one house for public worship, a separate apartment for the residence of the single brethren, and another for the sisters. There likewise, is a seminary for the education of young ladies, in which are taught all the useful, and some of the ornamental branches of education; and so great is the reputation of these schools, for the attention paid to the morals, as well as the literary improvement of the pupils, as to invite them from Philadelphia and other capital cities. The scenery around Bethlehem, and the primitive manners of its inhabitants, give the place an aspect of peculiar interest to the eye of a traveller, and render it eminently calculated to refine the taste, and preserve the morals of the students. It may be doubted whether the world affords a more pleasing scene than can be enjoyed in a fine summer evening in Bethlehem, when the groups of beautiful, simply, but elegantly dressed, and happy young females, are "let loose from school."

It is the principal town of the Moravians, &c.

Urutus Tracium, in Penn., is situated on the N. or left bank of the river Lehigh, in a tp. of the same name, at the mouth of Manockiey creek, on ground descending towards the river, and towards the creek, which gives it a fine appearance, when viewed from the S. or W.

It is closely built on 3 streets, the principal one extending N. and S., and the other two running from this towards the E. It contains a large stone church, built in the Gothic style, and plastered outside with a gray cement. It is 142 feet long, and 68 wide, of a proportionable height, and having a small tower rising from the centre of the top, surmounted with an elegant dome, in which is a small bell. It is handsomely furnished in the inside, having rows of benches on each side, for the two sexes. Their burial ground is in the NE. part of the town, and is laid out in regular alleys and walks, planted with trees. The graves, contrary to the custom of other Christians, are laid with their feet to the south. The number of dwelling houses is 72, besides shops and other out-houses. Bethlehem is 11 ms. W. by S. from Easton, and 52 N. by W. from Philadelphia. Here is a wooden bridge over Lehigh, 400 feet long, with 4 arches.

Birmah, extensive empire in Asia, to the S. of the bay of Bengal; containing the kingdom

of Birmah, Cassay, Aracan, and Pegu, and all the West coast of Siam. The kingdom of Birmah, frequently called Ava, from the name of its ancient capital, has Pegu on the S. and occupies both sides of the river Irrawaddy, to the frontiers of Assam on the N.; on the W. it has Aracan and Cassay, and on the E. China and Upper Siam. This kingdom was conquered in 1752, by the king of Pegu, who carried the Birmah monarch prisoner to Pegu, and caused him to be murdered there, in 1754. But Atomp, a Birmah of low distinction, who was crowned by the conqueror as chief at Monchidow, a small place to the N. of Ava, revolted against the Peguise, got possession of Ava in 1757, and by a short and battles, with various success, became the conqueror of Pegu, in 1767. This deliverer of his country continued in a state of warfare to his death, in 1760; and his successors have since added the other countries, which now form the Birman empire. The climate of Birmah is very salubrious, the seasons being regular, and the extremes of heat and cold seldom experienced. The soil is remarkably fertile, producing rice, sugar, canes, tobacco, indigo cotton, and all the tropical fruits in perfection; and on the banks of the Irrawaddy, which run S. through the whole country, is produced pure amber, and the finest teak timber in the world. The kingdom of Birmah abounds in minerals, it has mines of gold, silver, rubies, and sapphires, and affords amethysts, garnets, chrysolites, Jasper, loadstone, and marble. The general disposition of the Birmans is strikingly contrasted with that of the natives of Hindoostan, though separate only by a narrow ridge of mountains; in several places admitting of an easy intercourse. The Birmans are a highly inquisitive race, and very assiduous and impatient; but the character of their Benghal neighbours is known to be the reverse. The passion of jealousy, which prompts most eastern nations to murder their women, and surround them with guards, seems to have little influence on the minds of the Birmans; for their wives and daughters have as free intercourse with the other sex as the rules of European society admit. The Birmans are extremely fond both of poetry and music. The religion is, in fact, that of the Hindoos, though they are not votaries of Brama, but of deities of Buddha. Their system of jurisprudence is distinguished above any other Hindoo code, and is for perspicuity and good sense. The emperor of Birmah is a despotic monarch, and, like the sovereign of China, acknowledges no equal. The prevailing characteristic of the Birman court is pride. There are no hereditary dignities or employments in the government; for all honours and offices, on the demise of the possessor, revert to the crown. The capital of the kingdom, and metropolis of the empire, is Ammerapoora.

Birmingham, town of Eng. in Warwickshire. It is one of the great antiquity, and stands on the bank of a river, forming nearly a half-moon. The lower part is filled with workshops and warehouses, and consists chiefly of old buildings. The upper part contains many new and regular streets, and a handsome square. It has also, a large school endowed by Edward VI., an elegant theatre, and the completest set of baths

in the kingdom. The hardware manufactures of Birmingham have been noted for a considerable period; but of late years, by great additions to its trade from a vast variety of articles, such as metal buttons, buckles, plated goods, japanned and paper ware, &c., it has risen greatly in population; and in 1811, contained upwards of 75,000 inhabitants. It is plentifully supplied with coal by means of a canal to Wednesbury, and it has a communication with the Great Trunk from the Trent to the Severn, by a branch passing by Wolverhampton. The improved steam engines, made here by Bolton and Watt, deserve to rank high among the productions of human ingenuity; their application to various mechanical purposes, and particularly to the draining of mines, places them among the most valuable inventions of the age. Birmingham is 17 ms. NW. from Coventry, and 116 from London. Lon. 1° 50' W. lat. 52° 30' N.

Biscay, province of Spain, 97 ms. long and 30 broad; bounded on the N. by the bay of Biscay, E. by Upper Navarre, S. by Old Castile, and W. by Asturias. It contains 3 divisions, Biscay Proper, Guipuscoa, and Alaba. This province is a kind of republic, in the hands of the nobility, under the protection of the crown. Here are neither garrisons, custom-houses, stamps, nor excise, and of all the royal taxes, none are known but the *donativo*, or gratuitous donation. Biscay receives, by mere concession, a corregidor and a commissary of mines, but does not permit any order of the Spanish government to be executed without the sanction of the province. It produces apples, vines, and grain; and has also wood for building ships, and mines of iron and lead. The Biscayans are stout, brave, and choleric to a proverb, and the lowest labourer deems himself a gentleman. They speak the ancient Cantabrian language, which has no affinity with any other in Europe. Bilbao is the capital.

Black Sea, ancient *Euxine*, is bounded on the N. by European Russia, W. by Moldavia, Bulgaria, and Romania, S. by Turkey in Asia, and E. by Georgia. It is within a small fraction of 700 ms. from Erzerum Bouroun on the W. to the Georgian coast on the E. Its greatest breadth is from the Asiatic coast, at the mouth of Sacaria river, to the mouth of the Dnieper 400 ms., but gradually becoming narrower advancing to the E. The mean width may be assumed at 250 ms. This yields an area of 175,000 sqms. The Black sea is a very important recipient, receiving from the W. the immense volume of the Danube, from the N. the Dniester, the Bog, Dnieper, and, by the straits of Caffa, the discharge of the Don and Cuban rivers; from the E. a number of small mountain torrents are poured from the rugged steep of Georgia and Armenia, and from Asia Minor, beside many of lesser note, the Kizil Ermak and Sacaria rivers.

In the Euxine basin are included some of the finest regions of the eastern continent. From the extreme western source of the Danube, near Furstenburg in Swabia, to the great eastern bend of the Don, W. from Tzaritzin and Saratav on the Volga, the basin of the Euxine extends 1700 ms. in a direction very nearly E. and W. Its greatest breadth 1300 ms., from the sources of the Kizil Ermak to those of the Dnieper near Smolensk. It is remarkable that this basin is every where bounded on the S. by mountains, and on the contrary, except the mountains of Bohemia, the line of river source of the Euxine confluent lies along a flat and, in many places, marshy table land. The whole basin forms an immense triangle, based by the Alps and Harms in Europe, and Caucasus in Asia, 1800 ms. The perpendicular from Mount Harms to the sources of the Don and Dnieper 1100 ms., and comprising an area of, in round numbers, 1,000,000 sqms. If from this aggregate we deduct 10,000 sqms. for the Asoph, and 165,000 sqms. for the Black Sea, leaves for the land surface of this important region, 825,000 sqms. The great mass of water drained into

the Black Sea has but one point of outlet, the straits of Constantinople, the ancient Thracian Bosphorus. There is, at all times, a current setting from the Black into the Marmora sea, but of very unequal intensity. In the spring season, when the Danube and Russian rivers are swelled, the Bosphorus is, of course, augmented, and in autumn as naturally depressed. The water of the Black Sea is rather brackish than salt, and without tides.

A very unfounded opinion long prevailed, that the surface of the Black Sea, was lower than that of the Caspian, and that a subterranean current flowed from the latter, into the former, but this hypothesis is now completely exploded. Two German mathematicians, executed an actual survey from the Black to the Caspian, and the reverse. By these operations, it is now established as a fact, that the surface of the Caspian is 320 feet below that of the Black Sea.

The basin of the Euxine in respect to climate, has a very extensive range of temperature. The sources of the Kizil Ermak, are in about N. lat. 37° , whilst those of the Dnieper, are advanced as high as N. lat. 55° . Taken politically, this region comprises the northern part of European Turkey, great part of the Austrian empire, and of the kingdoms of Bavaria and Wirtemberg, the much larger portion of southern Russia, and a large section of Asiatic Turkey. It is impracticable to fix with any great certainty, the population now existing on the Euxine basin, but it may be safely estimated as exceeding 40,000,000. See *Danube*, *Dniester*, *Don*, &c.

Blannerhassett's Island, a remarkably beautiful and fertile island of about 500 acres, in the Ohio river, opposite Belpre. It is named from a Mr. Blannerhassett, an Irish gentleman of large fortune, who having, with his family, left Ireland in 1801, purchased and removed to this island, where he reared a costly and splendid edifice for his dwelling house. A considerable part of the island was laid out in gardens after the most approved models of European taste, and the whole scenery combined, seemed like the fabled fields of Elysium. But the house was most unfortunately burnt down in Dec. 1810, and shortly afterwards, the garden was totally destroyed, and few, or no vestiges now remain of its transient splendour and magnificence.

Blue Mountain, sometimes called *Antitany*, was originally called by the Indians *Kataogin chink*, which is said to signify "main or principal mountain." It crosses the Delaware, which forms a deep gap through it, about 24 ms. above Easton, and running WSW. crosses the Lehigh, which forms also a gap through it, and continues nearly the same direction westward of the Susquehanna. The height of this mountain is at three points in the cty. of Northampton, as follows: On the W. side of the Delaware, at the Delaware Water Gap, it is found to be 1250 feet; on the W. side of Lehigh Water Gap, it measures 1175 feet, and on the E. side of Kunkles Gap, or Allentown road, it measures 1135 feet. These measurements were taken by the common geometrical method, and will give the average height of the mountain in the cty. of Northampton, at 1186 feet. The Blue Mountain, so far as it extends in Northampton cty., is a very regular ridge, nearly uniform in its height, and has properly but four passes or Gaps in the cty. These are the Delaware Water Gap, the Wind Gap, the Lehigh Water Gap, and Allentown Gap, between the Wind Gap and Lehigh Water Gap. The mountain is in all places steep, thinly covered with poor timber, generally rocky, and unfit for cultivation.

Blue Ridge, one of the ranges of the Appalachian, or Alleghany mountains, and generally, though erroneously, considered the SE. ridge of that system. It extends from the Hudson river into Geo. The great Limestone valley, as it is called by pre-eminence, extends along the NW. side of the Blue ridge. The real Limestone range is, however, much more limited

than generally believed. In N. J. and Penn. it is seldom as much as 10 ms. wide from the foot of the mountain, and followed by clay slate, which forms the substrata, on the NW. side of the valley. The line of separation crosses the Del. about 20 ms. above the borough of Easton, the Lehigh at the Slates, the Schuylkill above the mouth of Maiden creek, and the Susquehanna at Harrisburg. Between the Susquehanna and Potomac, the relative distances and distinction between the two formations maintain a nearly similar position. From the latter stream SW., we are unprepared to mark their respective limits.

The entire length of the Blue Ridge, as a separate range, is upwards of 700 ms. Its general elevation varies considerably. In N. J., Penna., and Md., it is humble, but in Bedford cty. Virg., the Peaks of Otter exceed 5000 feet above the level of the Atlantic Ocean, and are the most elevated part of the Appalachian system SW. from Hudson river.

Bologna, city of Italy, capital of the Bolognese, with an archbishop's see, and an university. It lies at the foot of the Appennine mountains, in a fruitful plain and salubrious air. The river Saroni runs near its walls, and the Reno, which turns 400 mills for the silk works, through the city. There are a great number of palaces, particularly the Palazzo Publico, in which the cardinal legate or viceroy of the pope, resides. In the area before this palace is a noble marble fountain, the principal figure of which, a Neptune in bronze, 11 feet high, the workmanship of Giovanni di Bologna, is highly esteemed. The anatomical theatre, beside its museum, is adorned with statues of celebrated physicians. The church of St. Petronius is the largest in Bologna; and on the pavement of this Cassini drew his meridian line. There are 168 other churches. The private houses are well built, and the city contains 80,000 inhabitants. They carry on a considerable trade in silks and velvets, which are manufactured here in great perfection. The surrounding country produces immense quantities of oil, wine, flax, and hemp, and furnishes all Europe with sausages, macaroni, liqueurs, essences, and even lap-dogs. Bondou, kingdom of central Africa, bounded on the E. by Bambock, on the SE. and S. by Tenda and the Simbani Wild. cross, on the SW. by Wella, on the W. by Foa a Terra, and on the N. by Kataga. The country, like that of Woolly, is very generally covered with woods, but the land is not elevated, and towards the Faleme river, it is a low, sandy, and fertile. The soil is not very fertile, (according to Mr. Park) by any part of Africa, and on the central situation of Bondou, where the Gambria and Senegal rivers, it has become a place of great resort, both for the Seneg. slave dealers, who generally pass through it in going from the coast

to the interior countries, and for occasional traders, who frequently come hither from the inland countries, to purchase salt. The centre of this kingdom is about $8^{\circ} W.$ London, lat. $10^{\circ} N.$ Bana, psto. Lawrence city. Ind. 100 ms. SSW. from Indianapolis.

Borneo, island in the Ind. an Ocean, discovered by the Portuguese in 1521, before the discovery of New Holland, thought to be the largest in the world, being 1800 ms. in circumference. It is seated under the equator, that line cutting it almost through the middle. It is almost of a circular figure, abounds with gold, and the finest diamonds in the Indies are found in its rivers, being probably washed down from the hills by torrents. It produces likewise, rice, pepper, fruits, and bees-wax, which last is used instead of money. The beasts are, oxen, buffaloes, deer, goats, elephants, tigers, and monkeys. This island has fine rivers, especially towards the W. and S. The rainy season continues for 8 months in the year, and, as during that time all the flat country is overflowed, the air is rendered very unhealthful, and the inhabitants are forced to build their houses on floats, which they make fast to trees. The houses have but one floor, with partitions made of cane. The people are very swarthy, and go almost naked. There are Mahometans on the sea coast, but the rest are Gentiles. The capital of the same name, is large and populous, with a good harbour, and seated on the NW. side. Lon. 112° 27' E. lat. 4° 55' N.

Bornholm, island of the Baltic Sea, 20 ms. S. E. of Schonen in Sweden. Lon. 14° 56' E. lat. 54° 55' N.

Bornou, extensive country in Africa, bounded on the NW. by Fezzan, on the N. by the desert of Bilma, on the SE. by Nubia, and on the SW. by Cashna. It extends from 12° to 22° of E. lon., and from 17° to 21° of N. lat. The northern part is poor, and like the rest of the provinces of Zaara, but all the rest is well watered by springs and rivers, rendering the country prolific in corn, grass, and fruits, and giving it a pleasing aspect. The eastern and western frontiers, are divided into mountains and valleys, the latter, abounding with flocks of cattle, fields of rice and millet, and many of the mountains with wood, fruit-trees, and cotton. The climate is said to be characterized by excessive, though not by uniform heat. Two seasons, one commencing soon after the middle of April, the other at the same period in October, divide the year. The first is introduced by violent winds, that bring with them from the SE. and S. an intense heat, with a deluge of sultry rain, and such tempests of thunder and lightning, as destroy multitudes of the cattle, and many of the people. At the commencement of the second season, the ardent heat subsides, the air becomes soft and mild, and the weather perfectly serene. The complexion of the natives is black, but they are not of the negro cast. The capital is of the same name.

Bosphorus, an ancient name of two remarkable straits, the Thracian Bosphorus, now straits of Constantinople, and the Cimmerian Bosphorus, now straits of Kaffa, Zakhach, or Jenicale. In the outlet of the Euxine basin by the successive straits of Kaffa, Constantinople, and Dardanelles, we have a complete specific resemblance to the chain made by the straits of St. Mary, Michilimakinak, St. Clair, Detroit, Niagara, and St. Lawrence rivers. The quantity of water discharged by the American basin, it is probable exceeds that from the European, though the latter is most extensive on point of area. A very erroneous idea of the relative extent of the Canadian lakes prevails in the U. S. The Black Sea alone, covers more than twice the superficies of all the Canadian lakes taken together. According to the evidence of Pallas, Clark, and indeed every other traveller, whose observations have been made public, respecting the regions adjacent to the Caspian and Black Seas, there has been a progressive diminution of their waters. The whole land space from the base of the mountains of Transylvania, to the Aral Sea, including the alluvial mouths of the Danube, Dneister, Bog, Dneiper, Don, Wolga, and Ural rivers, show marks of water depression, and that, in all probability, the Caspian and Aral, were once links of the Mediterranean chain of inland seas.

Bosquines, borough of Eng. in Cornwall, on the Bristol Channel; 17 ms. NW. of Launceston, and 233 W. by S. of London. Lon. 4° 40' W. lat. 50° 45' N.

Bost, strong town of Persia, capital of Seblestan. Lon. 64° 15' E. lat. 31° 50' N.

Boston, borough of Eng. in Lincolnshire, seated on both sides of the Witham, not far from its influx into the sea; but its harbour can admit vessels of inferior burden only. It has a navigation from Lincoln, partly by the Witham, and partly by a canal, at the termination of which, in Boston, is a large and curious sluice; and there is another canal to Bourn. It is a flourishing town, 37 ms. SE. of Lincoln, and 115 N. of London. Lon. 0° 5' E. lat. 53° 1' N.

Boston, seaport and city of Mass., in Suffolk cty. on a fine peninsula, extending into Massachusetts bay about 2 ms., with a mean breadth of 1 mile. The surface on which the city stands is undulating, and gives an agreeable variety to the streets, and affords, with the aid of the buildings, particularly the state house, some very fine prospects of the adjacent country, bay, and islands. The harbour is spacious, and has sufficient water for the admission of the largest vessels, and adequately landlocked for their protection from all winds. It is very seldom so much incommoded with ice, as to render it inaccessible in the severest seasons of frost. The entrance is narrow, and defended by forts Warren and Independence.

Boston is a very commercial city, and in proportion to her resident population, contains an immense mass of wealth. In point of tonnage the shipping of Boston stands next, among the cities of the U. S. to New York. In 1815, the

tonnage of the former exceeded 143,000 tons. To facilitate the operations of commerce, agriculture, and internal intercourse, Boston is connected with the surrounding country by excellent roads, and the interior of Mass. and N. H., by the Middlesex canal. This city is indeed flourishing and prosperous. It is not, however, from the amount of its capital, or the extent of its commerce, that Boston founds its most solid claim to the respectable rank it possesses amongst the cities of the U. S.; it is upon the number and exalted character of its literary institutions which this city has based her true grandeur. It would be to swell this article to a much too extensive length to enumerate its various literary establishments; we may therefore notice the Athenæum, with 18,000, and the Boston library with 6000 volumes, as rich stores of intellectual wealth; and as in a scientific point of view Cambridge is only a suburb of Boston, we may in this view include the most extensive collection in the U. S., exceeding 25,000 volumes, which appertains to the University in the former place.

The natural disadvantages which must have existed in mutual communication between town and country from the insular situation of Boston, is amply obviated by 4 fine bridges. One over Charles river, from Boston to Charlestown, exceeds 1500 feet in length, with a breadth of 42 feet; West Boston bridge leading to Cambridge, is based on 180 piers, and extends 3483 feet; Craigie's bridge is between the 2 former. A fourth bridge over the bay to the SW. from Boston, with a wing dam, constructed to procure by aid of the tide, an immense water power, intended to put in operation different kinds of machinery.

The appearance of the streets and houses of Boston affords ample monuments of the change of taste, wealth, and views of convenience. In the ancient parts of the city, the streets are narrow and crooked; and the houses low and plain; but in the Western and more modern quarters, the streets are wide, and cutting each other at right angles; and the houses in a high degree spacious, splendid, and elegant.

The public buildings of Boston are numerous and spacious. The state house, standing upon an elevated spot, with the park, and open space of 10 acres, and a fine descending slope from the front of the edifice, presents, particularly from its dome, an expansive prospect over the harbour, with its numerous islands, and the adjacent city and country. The new court house, a fine building, reared at an expense of near 100,000 dollars; Faneuil Hall; an almshouse; custom house; and near 50 places of public worship adorn the city.

The population has constantly advanced; in 1800, it stood at 24,937; in 1810, 32,250; and in 1820, at 42,526. The vicinity is also very populous, well cultivated, and embellished with the most splendid country seats in the U. S.: 115 ms. from Portland in Me.; 40 ms. from Providence, R. I.; 100 from Hartford, Conn.; 210 from New York; 300 from Philadelphia; and 436 from Washington. Lon. W. C. 5° 58' E. lat. 42° 32' N.

Bosworth Market, town of Eng. in Leicestershire. In its vicinity was fought the famous battle between Richard III. and the earl of Richmond, afterward Henry VII. in which the former lost his crown and life. It is seated on a hill, 13 ms. W. of Leicester, and 106 NNW. of London.

Botany bay, bay of New South Wales, discovered by Captain Cook in 1770, and so called from the great quantity of herbs found on the shore. The promontories which form its entrance are named Cape Banks and point Solander. It was originally fixed on for a colony of convicts from Great Britain, which, in the sequel, took place at Port Jackson, 13 ms. further to the N. Lon. 151° 21' E. lat. 34° S.

Embracing a part of the great limestone and slate valley NW. from the Blue Ridge, much excellent soil exists in this country, though much of its surface is mountainous. Chief town Fincastle. Pop. 1820, 13,597. Co. lat. 37° 30' N. lon. W. C. 2° 45' W.

Bothnia East, province of Sweden, in Finland, on the East side of the Gulf of Bothnia, between the provinces of Kim and Finland Proper and Russia. It is 300 ms. in length, and from 90 to 220 in breadth. On the seacoast, and toward the S., the land is low and marshy, and the summers are often so cold as to destroy great part of the crops. The inhabitants are thinly spread over this large space, the cattle small, and bears numerous. The principal exports are timber, butter, whale oil, pitch, and tar. This province is sometimes called Cajania, and the capital is Cajaneburg.

Bothnia West, province of Sweden, in Nordland, on the W. coast of the Gulf of Bothnia. It is 230 ms. in length, between the seacoast and Swedish Lapland, and from 25 to 50 in breadth. The soil is tolerably fertile, but sudden frosts in July often destroy the crops. It has mines of copper and iron, and numerous forests. The chief articles of commerce are copper, iron, skins of foxes, ermins, bears, wolves, reindeer, otters, &c. The capital is Umea.

Bothnia, Gulf of, sea or large gulf branching N. from the Baltic, at the isle of Aland, and bounded on the W., N. and E. by the dominions of Sweden. On its coasts are many small islands.

Bourchemin, seigniory, L. C. Richelieu cy., 33 ms. E. from Montreal.

Bordeaux, ancient city of France, in the department of Gironde, and late province of Gui-

enne. It is built in the form of a bow, of which the river Garonne is the string. This river is bordered by a large quay, and the water rises four yards at full tide, for which reasons the largest vessels can come up to it very readily. The ancient city of Bordeaux, though considerable in point of size, was ill built, badly paved, without police or any of these municipal regulations, indispensably requisite to render a city splendid or elegant. It has entirely changed its appearance within these last 40 years. The public edifices are very noble, and all the streets newly built are regular and handsome. The quays are 4 ms. in length, and the river itself is considerably broader than the Thames at London bridge. The ruins of a very large amphitheatre yet remain, constructed under the emperor Gallienus, built of brick; likewise several aqueducts. It is 87 ms. S. of Rochelle, and 325 SW. of Paris. Lon. $0^{\circ} 34' W.$ lat. $44^{\circ} 50' N.$

Bowman's Mountain, called the *Bald Mountain*, near the western limits of Luzerne city, is a high, regular, barren range, whose average height may be 1000 feet. This extends from the E. to the W. branches of the Susquehanna river, between which it appears to have no

other name than those mentioned, except that, in a small territory on the head of Fishing creek, the inhabitants call it the *N. Mountain*. Westward of the waters of the Susquehanna, it forms the main ridge of Alleghany Mountains. It crosses the E. branch of Susquehanna, at the mouth of Tunkhannock and Bowman's creeks, and extending N. eastwardly, it is called *Tunkhannock Mountain*, and terminates in Susquehanna city, where it is called the *Elk Mountain*.

Bowman's Valley, lying on Bourn's creek, between Bowman's and Mahopeny Mountains, Luzerne city, Penn., is not very populous, and the land generally poor. It is about 2 ms. wide and 15 ms. long. The principal pop. is near the river.

Brasil, an extensive country of South America, claimed and in part possessed by Portugal. It extends along the Atlantic Ocean from Cape Orange, lat. 4° N. to near lat. 33° S. and from Cape St. Rocque lon. W. C. 44° E. to the mouth of the Javary river, lon. W. C. 5° E.; extending through 39° of lat. It is bounded NE. by the Atlantic Ocean, N by Guayana and Colombia; NW. by Colombia, SW. by Peru and the United Provinces of La Plata, and SE. and E. by the Atlantic Ocean. It is intersected by a chain of mountains ranging along the Atlantic coast from S. lat. 10° to 30°. The aspect of a country of such vast extent must present an indefinite variety of surface and soil; Brasil is, however, in general, rather plane than mountainous. The Amazon, with its numerous branches waters and fertilizes these immense regions, affording the most extensive tracts of productive soil in one connected body, ever united under one sovereignty.

The Brasil is about 2500 ms. in length and breadth, with an area of about three millions of sqms. It is very difficult to fix its population; supposed to be about 2,000,000, independent of the aborigines not subject or tributary to the crown of Portugal. It is divided into the captain generalships of Rio Grand, St. Pauls, Minas Ceraes, Janeiro, Bahia, Pernambuco, Ceara, Maranham, Grand Para, Mattagrosso, and Goias. It would be needless to enumerate the productions of Brasil, either mineral or vegetable: it is sufficient to observe that in both kingdoms, the objects are almost commensurate with all that can administer to the wants, comforts, or luxury of human beings. At this epoch (1826) war is waging between Brasil and the Independent Provinces on La Plata. By the influence of the Holy Alliance the revolutions of Brasil have eventuated in the establishment of an imperial government under Pedro, son of the reigning king of Portugal. This Brasillian emperor has declared war in order to recover the Banda Oriental. This war is remarkable and important; it is the first instance of the American civilized nations entering formally into a belligerent state between each other. The Brasillian monarch was the party who declared war, and unless absolutely insane, must have secret and powerful aid secured, before thus braving the much superior power of the Spanish nations.

Brassos a Dios, river of Texas, in the intendancy of St. Louis Potosi; the sources of the Brassos, are not correctly known, but are supposed to be south of Red river, about N. lat. 33° and W. lon. W. Buenos Ayres, city and scaport, the capital of Paraguay, and the seat of a late viceroyalty, and now of the united provinces of La Plata. A great part of the treasures and merchandise of Peru and Chili are brought here, which are exported to Spain. It was founded by Mendoza, in 1535, but afterwards abandoned; and, in 1544, another colony of the Spaniards came here, who left it also; but it was rebuilt in 1582, and inhabited by Spaniards and the native Americans. It is a bishop's see, and has an elegant Cathedral, a small Indian church, two monasteries, five convents, a college, a beautiful square, and about 70,000 inhabitants. The trade is carried on with the provinces of Peru

by means of carts drawn by oxen, which travel together in caravans. The country around is quite open and level, furnishing every species of American and European productions, but the most extraordinary circumstance is the propagation of cattle, which have multiplied so immensely that a great many are killed merely for their hides. The trade of the city, already considerable, may become immense. Placed upon the bank of the Plata river, its situation would enable an enterprising people to form it into anemporium for the merchandise of the wide spread regions drained by that stream and its numerous confluent. At present the exports are, gold, silver, beef, tallow, hides, &c.; and imports manufactured goods, principally from Great Britain. An extensive inland commerce, by caravans, is carried on over the Andes, to Chili and Peru. The harbour is yet an open road without moles or quays, but the advance of commerce in the hands of a free people, will superinduce the necessary improvements. Of the present population about one third are civilized Indians. In 1806, Buenos Ayres was surrendered to the English, under major-general (now lord) Beresford; but was retaken by the Spanish forces about two months afterwards, when the general and his army were made prisoners of war. In July, 1807, the English again made an attack on this place, with 10,000 men, but without success. It has since shared the vicissitudes of the revolutionary war, but may now be considered as the seat of a new and rising empire. It is seated on the Plata, 220 ms. from the ocean, though the river there is 21 ms. in breadth. Lon. W. C. 18° 29' E. lat. 34° 25' S.

Buenos Ayres, province of S. America, one of the United provinces of La Plata; bounded SE. by the Atlantic Ocean, SW. by the Colorado river, W. by Cordova, and NE. by the Rio de la Plata; length from the SW. to NE. 100; mean width 200 ms.; area about 80,000 squs. It is in general an open and flat country, with a soil of exuberant fertility; and situated between 33° and 40° of S. lat. produces in abundance the grains and fruits of a temperate climate. The extent of its unwooded plains, however, invite to and superinduce pastoral pursuits. Agriculture is too much neglected, and the attention of the inhabitants drawn to the rearing of cattle and horses. Manufactures can scarcely be said to exist in their most incipient state. Relative pop. uncertain.

Buffalo lake, of N. America, laid down by Henr. Lon. W. C. 31° W. lat 67° 20' N.

Buffalo, port of entry, post town, and seat of justice, in Erie cty. N. Y. on lake Erie, at the head of Niagara river, 23 ms. above Niagara falls. This town is admirably situated to become a great interior mart. Buffalo creek is of sufficient depth, 12 feet, to admit an excellent harbour, and the necessary works to meliorate its entrance to lake Erie, and to facilitate the ingress and egress of vessels, are now in an inconsiderable state of forwardness. The grand canal of N. Y. is intended to debouch into lake Erie, at Buffalo harbour. The town is built upon an elevated and dry plain, extending in great part in one long street on each side of the road, leading from the harbour to the inte-

rior of N. Y. This fine village was burnt by the British in the late war, but has risen in an improved state from its ashes. The present pop. in the village, separate from the other parts of the tp., exceeds 1000.

Burrampooter, river of Asia, which rises near the head of the Ganges, in the mountains of Thibet. It first takes its course to the E. directly opposite to that of the Ganges, and winding with a rapid current through Thibet, where it is named Sampoo, or Zanchin, it washes the border of the territory of Lassa, and proceeds SE. to within 220 ms. of Yunan, the westernmost province of China; then turning suddenly to the W. through Assam, it enters Bengal on the NE., where it assumes the name of Burrampooter. It then makes a circle round the western point of the Garrow mountains, and altering its course to S. meets the Ganges, about 40 ms. from the sea, after having meandered for more than 2000 ms. During the last 60 ms. before its junction with the Ganges, it forms a stream which is regularly from 4 to 5 ms. wide; and, but for its freshness, might pass for an arm of the sea. The Ganges is better known than the Burrampooter, but as delineated on our best maps, it is difficult to determine which is the main stream. Measured by a comparative scale, the valley of the Burrampooter;

is about 1400 ms. in length, and being a mountain river, the volume of water discharged at its mouth is enormous. The valley of this great river, lies between N. lat. 29° and 33° $30'$.

Cadiz, a large and rich city of Spain in Andalusia, with a good harbour. It is a bishop's see, and seated on an island 18 ms. in length, and 2 in breadth, but the NW. end, where the city stands, is not two broad. It has a communication with the continent by a bridge. The bay formed by it is 12 ms. in length, and 6 in breadth. The S. side is inaccessible by sea, because it is edged with craggy rocks; and two forts, the *Castel* and *Malagorda*, command the passage into the harbour. Except the *Calle Ancha*, all the streets are narrow, ill-paved,

and insufferably stinking. The roofs are flat, covered with an impenetrable cement, and few are without a turret for the purpose of commanding a view of the sea. High above all these, stands the tower of signals. Here flags are hung out on the first sight of a sail, marking the size of the ship, and the nation it belongs to. The public walk, or Alameda, is pleasant in the evening. The sea air prevents the trees from thriving, and destroys all hopes of future shade. Westward of the Alameda is *Camposanto*, a large esplanade, the only airing for coaches. Opposite to it is the fortress of St. Sebastian, built on a neck of land running out into the sea. The round tower at the extremity is supposed to have saved the city in the earthquake in 1755, from being swept away by the fury of the waves. The inhabitants are computed at 100,000. It is a very ancient place, being built by the Phenicians; it was afterwards a Roman town; and there are still several remains of Roman antiquities. It is 45 ms. W. of Gibraltar, and 30 W. by S. of Malaga. Lon. $6^{\circ} 11'$ W. lat. $36^{\circ} 31'$ N.

Cadorino, province of Italy, in the territory of Venice; bounded on the E. by Friuli Proper, on the S. by the Bellunese, and on the N. by Brixen. The chief town is Cadore.

Cadon, tp. Pulaski cy. Ark. Pop. 1820, 717.

Cadwand, island on the N. coast of Flanders, at the mouth of the Scheldt, which river it commands.

Caen, considerable city of France, in the department of Calvados, and late province of Lower Normandy, of which it was the capital. It has a celebrated university, and an academy of literature, and the inhabitants are computed at 40,000. The river Orne runs through the city, to which the tide brings up large vessels. It is 65 ms. W. by S. of Rouen, and 125 W. of Paris. Lon. $0^{\circ} 17'$ W. lat. $49^{\circ} 11'$ N.

Caer, for some places that begin thus, as *Caerdiff*, see under *Car*.

Caernarvon, tp. of Lancaster cy. Penn. It is watered by Little Conestogoe creek, and bounds on Berks cy. on the NE. Pop. at est. 1000 persons.

Caermarthenshire, cy. of S. Wales, 45 ms. long, and 25 broad, area, 1200 sqms. It is bounded S. by Bristol channel, W. by Pembrokeshire, N. by Cardiganshire, and E. by Brecknockshire and Glamorganshire. The principal rivers are the Towy, Cothy, and Tave; of which the first abounds with excellent salmon. It contains 228,000 acres; is divided into 8 hundreds, and 145 parishes, and has 6 markets.

towns. In 1801, the inhabitants amounted to 67,317, in 1811, 77,287, and in 1821, 90,239. It abounds with ancient forts, camps, and tumuli. Near Caermarthen, towards the E. may be seen the ruins of Kastolk, Karry, and several vast caverns, supposed to have been copper mines of the Romans. Near this spot is a fountain, which ebbs and flows twice in 24 hours. The county and city send each a member to parliament.

Caermarthen, borough of Wales, capital of Caermarthenshire, on the Towy, over which is a stone bridge, to which small vessels may come up. Caermarthen is a city of itself, governed by a mayor. There are iron and tin mines in the neighbourhood. It is 24 ms. SE. of Cardigan, and 220 W. by N. of London. Lon. 4° 23' W. lat. 52° 12' N.

Caernarvonshire, city of N. Wales, bounded on the N. and W. by the sea, on the S. by Merionethshire, and on the E. divided from Denbighshire by the river Conway. It is about 50 ms. in length, and 20 in breadth. It contains 310,000 acres; is divided into 7 hundreds, and 68 parishes; has one city and five market towns, and sends two members to parliament. In 1801, the inhabitants amounted to 41,521, in 1811, to 49,336, and in 1821, to 57,958. The principal rivers are the Conway and Seint. This city being the most rugged district of N. Wales, may be truly called the British Alps. Its central part is occupied by the famed Snowdon, and the prospects around are rude and savage in the highest degree, but not without a mixture of beauty, when the dimensions of the vales admit the varieties of wood, water, and meadows. The soil in the valleys, on the side next Ireland, is pretty fertile, especially in barley; great numbers of black cattle, sheep, and goats, are fed on the mountains, and the sea, lakes, and rivers, abound with variety of fish. Copper mines have been worked in various parts of these mountains, as well as lead, and quantities of stone, excellent for hones, are dug near Snowdon; to the dreary region of which the rich vale of Conway below forms a pleasing contrast. The chief manufacture is woollen cloth.

Caernarvon, borough and seaport of Wales, capital of Caernarvonshire, on a strait of the sea, called Menai, near its entrance into Caernarvon bay, and carries on a considerable trade with Ireland, and the principal English ports. Caernarvon is governed by the constable of the castle, who is always mayor. Here are salt water baths, and elegant hot and cold baths, which are much frequented during the season. It is 7 ms. SW. of Bangor, and 244 NW. of London. Lon. 4° 20' W. lat. 53° 8' N.

Caerleon, town of Eng. in Monmouthshire, on the Usk, 19 ms. SW. of Monmouth, and 148 W. by N. of London. Lon. 3° 50' W. lat. 51° 40' N.

Caerphilly, town of Wales, in Glamorganshire, between the Taaf and Rumney, 7 ms. N. of Cardiff, and 160 W. of London.

Caerwent, village of Eng. in Monmouthshire, 4 ms. SW. of Chepstow. It is the Venta Silurum of the Romans.

Caerwys, town of Wales, in Flintshire, 5 ms. W. of Flint, and 212 NW. of London.

Cesar's Creek, tp. Greene cty. Ohio. Pop. 1810, 649, in 1820, 1131.

Caffa, or **Theodosia**, the largest town of the Crimea, with an excellent road and harbour. Caffa was the Theodosia of the ancients, a name which has been restored to it since the Russians became possessed of the Crimea. It contains about 20,000 inhabitants, and is constantly well garrisoned. The trade consists in wax, furs, lambskin leather, and horses. Caffa is seated on a bay of the Black Sea, at the foot of some high mountains, 65 ms. E. by N. of Sevastopol, and 130 SE. of Precop. Lon. 35° 20' E. lat. 45° N.

Caffy, Strait of, the ancient Cimmerian Bosphorus, a strait that forms the communication between the Black Sea, and the sea of Asoph.

Caffraria, very extensive country of Africa, bounded on the N. by Negroland and Abyssinia, on the W. by part of Guinea, Congo, and the sea, on the S. by the Cape of Good Hope, and on the E. by the sea.

Cagli, ancient episcopal town of Italy, in the duchy of Urbino, at the foot of the Appennines, 20 ms. S. of Urbino. Lon. 12° 42' E. lat. 43° 26' N.

Cagliari, ancient and rich city, capital of Sardinia, with an archbishop's see, a university, a castle, and a good harbour. Lon. 9° 14' E. lat. 39° 27' N.

Cahaba, river of Al. rises in the angle between the Coosa branch of Alabama, and the Black Warrior branch of Tombigbee rivers, and flowing S. over Shelby, Cahaba, and Dallas ctes., joins the Alabama at the town of Cahaba, after a comparative course of 120 ms. Its waters, much good land.

Cahaba, city, Al., bounded W. by Tuckaloosa, N. by Shelby, E. by the Coosa river, and S. by Montgomery and Dallas, length 55, breadth 43 ms.; area 2265 sqms.

This was one of the cities not included in the census of 1820.

Cahaba, pst. and seat of justice, Dallas cty. Al., at the mouth of the Cahaba, on the left bank of Alabama river. It was the seat of government for the state, until recently the legislature of Al. have removed it to Tuscaloosa.

Cahoon Falls, in the Mohawk, 3 ms above its junction with the Hudson at Waterford. The descent is about 70 feet. It is a sublime and interesting feature in American scenery.

Cahokia, pstv. St. Clair cty. Ill., on the E. side of the river Mississippi, 64 ms. N. by W. of Kaskaskias, and 5 from St. Louis.

Cahors, considerable town of France, in the department of Lot, and late province of Quercy, with a university. It is seated on a peninsula made by the river Lot, and built partly on a craggy rock. There are 3 bridges over the river. The cathedral is a Gothic structure, and has a large square steeple. Cahors is 50 ms. NW. of Alby, and 287 S. of Paris. Lon. 1° 32' E. lat. 44° 26' N.

Cajanaaburg, capital of E. Bothnia, in Sweden, on lake Cajania, 300 ms. NE. of Abo. Lon. 27° 45' E. lat. 64° 13' N.

Cajazzo, or **Cajizzo**, episcopal town of Naples, in Terri di Lavora, 22 ms. NE. of Naples. Lon. 14° 34' E. lat. 41° 10' N.

Caicos, islands of the West Indies, to the N. of St. Domingo, which take their name from the principal one. Lon. W. C. $5^{\circ} 30'$ E. lat. $21^{\circ} 40'$ N.

Caifong, large and populous city of China, on the Hoang ho, in the province of Honan. Lon. $113^{\circ} 27'$ E. lat. 35° N.

Cailloma, town, Penn., near the source of the Apurimac, between Cayo and Arequipo, nearly 50 ms. from the latter, and 160 from the former. Lon. W. C. $5^{\circ} 30'$ E. lat. $13^{\circ} 30'$ S.

Camains, or more correctly *Cumans*, a group of small islands, in the Caribbean sea, to the NW. of Jamaica. Lon. W. C. 5° W. lat. $19^{\circ} 15'$ N.

Ca-Ira, pstv. Cumberland cty. Virg., on Willis' Creek, 62 ms. W. from Richmond.

Caingorm, mountain of Stid., between the cities of Banff and Murray. It rises in a conical form 1750 feet above the level of a small lake near its base, which is the source of the Avon, and 4050 feet above the level of the sea; its sides clothed with fir, and its top generally covered with snow. It is famous for beautiful rock-crystals, much esteemed by lapidaries.

Cairo, or *Grand Cairo*, large city, capital of Egypt. It consists of 3 towns, about a mile apart; Old Cairo, New Cairo, and the port termed Bulaco. The population is estimated at 300,000. Old Cairo is now reduced to a small place. New Cairo is a mile from the river, and 7 ms. in circumference. It stands on the right bank of the Nile, 10 ms. S. of its mouth. Lon. $31^{\circ} 18'$ E. lat. $30^{\circ} 7'$ N.

Cairo, pst. Greene cty. N. Y., formerly called Canton, 10 ms. above Catskill town on Catskill Creek. Pop. 1820, 2553.

Cairo, town, Ill., at the mouth of the Ohio river.

Cairo, pstv. Sumner cty. Ten., at the influx of Bledsoe's creek, into Cumberland river, 30 ms. by land above Nashville.

Caïran, town of the kingdom of Tunis, and next to the city of Tunis for trade and number of inhabitants. It is situate near a sandy desert, where are found many vestiges of former magnificence; it stands on the river Magrida, 60 ms. S. by E. of Tunis. Lon. $10^{\circ} 26'$ E. lat. $36^{\circ} 5'$ N.

Caistor, town of Eng. in Lincolnshire. Near it are the remains of a monastery, and many Roman vestiges. It is 12 ms. SW. of Grimsby, and 165 N. of London.

Caistor, tp. in the cty. of Lincolnshire, U. C., between Binbrook and Cambsborough, and is watered by the river Welland.

Caitness-hire, most northerly cty. of Stid., 35 ms. long, and 20 broad, bounded on the N. by Pentland Frith, E. and SE. by the German Ocean, and W. by Southerlandshire. The S. angle is occupied by mountains, and a vast ridge of hills forms the SW. boundary, ending in a promontory called the Ord of Caitness, which runs out into the sea. The rest of the cty. may be deemed an immense morass, interspersed with some fruitful spots, producing oats and barley, and others affording pasture for sheep, and black cattle. Its other chief products, are butter, cheese, yarn, skins, feathers, and kelp. It sends a member to parliament alternately with Buteshire. English is chiefly

spoken on the coast, but in the highlands, the Gaelic prevails. Pop. 1801, 22,600, in 1811, 25,419, and in 1821, 30,238. Wick is the capital.

Caket, town of Persia, near Mount Caucasus. Its trade consists chiefly in silk. Lon. $46^{\circ} 15'$ E. lat. 33° N.

Calabar, town of the kingdom of Benin, capital of a country of the same name. The Dutch have a factory here. It is 140 ms. SSE. of Benin. Lon. $7^{\circ} 15'$ E. lat. $3^{\circ} 40'$ N.

Calabria, country of Naples, divided into the provinces of Calabria Citeriore, and Calabria Ulteriore, or Hither and Further Calabria. The first is bounded on the S. by Calabria Ulteriore, N. by Basilica, and W. and E. by the Mediterranean. Cosenza is the capital. Calabria Ulteriore is washed by the Mediterranean on the SE. and W., and bounded by Calabria Citeriore on the N. Catanzaro is the capital.

Calahorra, episcopal town of Spain, in Old Castile, on the side of a hill, which extends to the Ebro, 70 ms. E. of Burgos. Lon. $2^{\circ} 7'$ W. lat. $42^{\circ} 12'$ N.

Calais, seaport of France, in the department of the straits of Calais, and late province of Picardy, with a citadel. It is built in the form of a triangle, one side of which is towards the sea. The fortifications are good, but its greatest strength is its situation among the marshes, which may be overflowed at the approach of an enemy. In time of peace, there are packet boats which go twice a week between Dover and Calais. It is 21 ms. ESE. of Dover, and 152 N. of Paris. Lon. $1^{\circ} 56'$ E. lat. $50^{\circ} 58'$ N.

Calais, tp. Washington cty. Maine. Pop. in 1810, 372, in 1820, 418.

Calais, pst. Washington cty. Maine, on the Passamaquoddy river, 36 ms. NE. from Machias. Pop. 370.

Calatayud, town of Spain, in Arragon, at the confluence of Xalon and Xiloca, 57 ms. SW. of Saragosa. Lon. $1^{\circ} 9'$ W. lat. $41^{\circ} 42'$ N.

Calatrava, town of Spain, in New Castile, the chief place of the military order of the knights of Calatrava. It is seated near the Guadiana, 80 ms. S. of Madrid. Lon. $33^{\circ} 20'$ W. lat. $39^{\circ} 4'$ N.

Calben, town of Germany, in the old mt. rch. of Brandenburg, with a good castle, 32 ms. N. of Magdeburg.

Calcar, town of the dutchy of Cleaves, seated near the Rhine, 8 ms. SE. of Cleaves. Lon. $5^{\circ} 55'$ E. lat. $51^{\circ} 40'$ N.

Calcasieu, river, Lou., rises in the pine woods, 20 ms. S. of Natchitoches. The Calcasieu is very remarkable for its almost perfect compliance with the curve of the Sabine, the two rivers

being a trifling deviation from 35 ms. asunder, the entire length of the former; and, like the Sabine, the Calcasieu receives the largest tributaries from the right. After an entire course of 70 ms., the Calcasieu enters the lake of the same name, at lat. $30^{\circ} 8' N.$ lon. $W. C. 16^{\circ} 23' W.$ This stream rises in a forest of pines, which tree composes nine-tenths of all the timber found on its banks. About 10 ms. in a direct line above the head of the lake Calcasieu, the forest begins to become chequered with prairie, copses of timber gradually become more scattered, and at the head of the lake trees entirely disappear. On the left side the open prairies skirt the river 15 or 20 ms. higher than on the opposite shore. In the prairie between Calcasieu and Mermentau, are scattered copses of wood, mostly pine, with a few oaks; soil poor and thin. Very little of the whole surface watered by Calcasieu is fit for culture, though high, dry, and well watered with limpid and excellent spring water. One immense pine forest covers the country around by Calcasieu N. of the prairies. The tide flows up the Calcasieu as far as the head of the prairies.

Calcasieu, lake, Lou., is about 30 ms. in length and 10 or 12 ms. wide, communicates with the Gulf of Mexico, a channel of about 8 or 10 ms. in length and from 1 m. to 200 yards wide. At the mouth of this outlet is a bar, having not more than four feet water. The lake, like that of Sabine, is shallow, not having more than 506 feet water in any part, and near the shores not more than 2 or 3. The banks of Calcasieu outlet and lake are something higher than those of the Sabine, but on each the entire absence of timber precludes settlement.

Calcutaypro, province of Peru, NE. from Cuzco.

Calcutta, or *Fort William*, the emporium of Bengal, situated on the E. side of the Hoogly, or western arm of the Ganges, 100 ms. from the sea, in the bay of Bengal. It is a modern city, having risen on the site of the village of Govin-poor, about 90 years ago. It extends from the western point of Fort William, along the banks of the river, almost to the village of Cossipoor, 13 ms.; the breadth, in many parts, inconsiderable. Calcutta is 1030 ms. NNE. of Madras. Lon. $88^{\circ} 28' E.$ lat. $22^{\circ} 23' N.$

Caldwell, pst. and seat of justice, Warren cty. N. Y., on lake George. Lat. $43^{\circ} 22' N.$ lon. $W. C. 3^{\circ} 25' E.$

Caldwell, tp. Warren cty. N. Y. Pop. 1820, 723.

Caldwell, cty. Kent., on both sides of Cumberland river, bounded SW. by Ten. river, NW. by Livingston, NE. by Hopkins, SE. by Christian, and S. by Ten.; length 40, mean width 20 ms., ar. 800 sqms. Surface generally level, soil fertile. Staples, grain, tobacco, live stock, and salted provisions. Chief town, Eddyville. Pop. 1820, 9022. Ctl. lat. $37^{\circ} 20' N.$ lon. $W. C. 10^{\circ} 15' W.$

Caledonian Canal. This splendid work is amongst the most remarkable of those artificial channels which have been performed in modern times. Sld. is traversed obliquely from NE. to SW. by a very remarkable mountain valley,

extending from the Atlantic Ocean to the German Ocean, chiefly through Inverness-shire, bounded on both sides by elevated and precipitous mountains; this valley terminates towards the Atlantic Ocean by Loch Linnhe, and in the German Ocean by the Murray Frith. The tide from the German Ocean flows to Inverness, where the discharge of Loch Ness falls into the Murray Frith. From thence the valley extends about 60 ms. to Atlantic tide water at Fort William. The base of this valley is composed of two considerable lakes, Loch Lochy and Loch Ness, with their confluent rivers.

The idea of executing a continued chain of intercommunication through this pass, by locks and canals, was suggested, in 1773, by Mr. James Watt, but no operative proceeding instituted until 1802, when Mr. Thomas Telford's nautical and inland survey of Sld. led to the execution of the CALEDONIAN CANAL.

A board was formed, by Act of Parliament, expressly for the purpose, by which the plan proposed by Mr. Telford was adopted. This plan was to form a canal on a large scale, viz.: 120 feet wide at the water surface, 50 feet at the bottom, and 20 feet depth of water; the locks to be from 170 to 180 feet in length, and 40 feet wide. These dimensions are sufficient, both in single and united locks, to admit of the largest vessels trading between Liverpool and the Baltic, the average of W. Indiamen, and a 32 gun frigate fully equipped. The following interesting particulars, respecting this great work, are extracted from Mr. Edward Everett's letter, of Jan. 14th, 1826, to Mr. Joseph M. White.—*Vide Nat. Int. Feb. 2d. 1826.* It may be permitted, however, to notice that, in addition to the authorities cited by Mr. Everett respecting the Caledonian Canal, may be also cited Brewster's Encyclopædia, article Navigation Inland.

"The entire history of the Caledonian Canal, its rise and progress, and every article relative to its construction, may be found in a series of 21 reports made by the commissioners to the House of Commons, and comprised in two folio vols. of the Parliamentary Reports. A sketch of the work, as projected, may be found at the close of Phillips's history of Inland Navigation, and a condensed account of it, as completed, is contained in Dupin on the commercial power of Great Britain, vol. ii. p. 201. A great deal, however, may, of course, be learned from the commissioner's reports alluded to, which is not to be found in Dupin.

The first suggestion of this grand work was made by the illustrious Watt, in 1773. Its object was to combine the several lakes, known under the names of Loch Ness, Loch Oich, Loch Lochi, Loch Eil, and Loch Lymche, into one unbroken communication between Fort William and Inverness. These lakes lie in the middle of Sld., and, by opening this canal, vessels would be enabled to pass from the N. Sea into the Atlantic Ocean, or the Irish Channel, without making the dangerous circuit of the Orkneys and the Hebrides. The work was effected by excavating in the whole about 21 ms. of canal, and thus obtaining a navigable line of 70 ms. The breadth of the canal is 50 feet, its depth 20, and it is navigable for frigates of 32

guns. There are 23 locks on the line, 8 of which form 1 continuous series, at the SW. extremity of the canal, and are known by the name of Neptune's stairs.

In the construction of this canal, numerous and formidable obstacles were encountered, owing to the necessity of deepening the lakes, which formed a part of the line, and in consequence, also, of the impetuous character of some of the streams partly depended on as feeders. The whole was accomplished in 19 years from the first survey, by Parliamentary grants, at an expense of about \$4,000,000. It was opened Oct. 23d, 1822, when a steamboat and 2 sloops of war passed from the locks at Murrion, near Inverness, to Fort William. The passage from sea to sea, a distance of 69 ms., was effected in 13 hours, including the time requisite for clearing 22 locks.—Dupin, vol. ii. 217.

The valleys of the Hudson, Lake Champlain, and Sorrel river, is the only other pass in the globe which bears a strong comparison, in aspect and structure, with that of Stid. In magnitude, the American glen is on a much larger scale, but in many other essential features the analogy is striking. See *Lochs Ness and Lochy*.

Caledonia, city. Ver., bounded by Washington SW., Essex NE. and E., Conn. river SE., and Orange S.; length 37, mean width 14 ms., area about 500 sqms., surface hilly, and in part mountainous; soil generally productive in grain and pasturage. Chief town, Danville. Pop. 1820, 16,670. Ctl. lat. 44° 30' N. lon. 5° 10' E. W.C.

Caledonia, New, a large island, in the S. Pacific Ocean, extending from 19° to 22° S. lat. and from 163° to 167° E. lon. It was discovered by Capt. Cook in 1774. The inhabitants are stout, tall, and in general well proportioned, their hair and beards black, and much frizzled so as to be somewhat woolly in some individuals.

Calenberg, a principality of Lower Saxony, which constitutes a part of the duchy of Brunswick. It is divided into two parts, and the principal towns are Hanover and Göttingen. It takes its name from an ancient castle, now in ruins, seated on the Leine, 17 ms. S. of Hanover.

Caluco, town on the coast of Chili, inhabited by Spaniards, Mestees, and Indians, 180 ms. S. of Valdivia. Lon. W. C. 3° 23' E. lat. 42° 40' S.

Calu, city of New Granada, in the province of Popayan, in a valley of the Andes, on the river Cauca, 20 ms. E. from Bonaventura. Lon. W. C. 1° E. lat. 3° 15' N.

Caluagua, port of the W. Indies, in the W. part of St. Vincents.

California, general name of the western coast of N. America, from Cape St. Lucas N. lat. 2° 52' to N. lat. 42°, although nearly 20° of lat. It is divided into two parts, Old California and New California.

Old California was discovered under the direction, and in part by the personal observation, of Cortez, the conqueror of Mexico, and found to be a long narrow peninsula extending through 11° of lat., and united to the continent to the

NW. by a neck of land reaching from the mouth of the Colorado river westward 160 ms. to a bay since called San Diego. A chain of mountains ranges through this extensive peninsula. "The sky," says Humboldt, "is constantly serene, of a deep blue, and without a cloud." The Cerro Giganta, the highest peak of its mountains, reaches to near 5000 feet. The soil is sandy and arid, and rain scanty and unfrequent. Springs of fresh water are also rare. It extends over 56,000 sqms., with a pop. not more than 1,000. Toward the close of the 17th century, the Jesuits formed several settlements here, and endeavoured to govern the natives with the same policy and authority that they exercised in their missions in Paraguay. They seem studiously to have depreciated the climate and soil of the country, but on their expulsion from the Spanish dominions, the court appointed Don Joseph Gálvez to visit this peninsula. His account of the country was favourable; he found the pearl fishery on its coast to be valuable, and he discovered mines of gold of a promising appearance. On the few spots where water is found, the soil is excellent; and it is reported that vines grow naturally in the mountains, and that the Jesuits, when they resided here, made abundance of wine, in taste approaching to that of Madeira. The chief town is Loreto.

New California, extends from Old California to the utmost limits of the Spanish claims, on the N. American coast of the Pacific Ocean, or from 33° to 42° N. lat. about 600 ms. The breadth inland is trifling, and the interior unknown, or at least very imperfectly explored. The whole extent actually peopled by civilized inhabitants, does not exceed, if it amounts to 16,000 sqms. The soil is, however, as remarkable for its fertility and abundance of limpid water, as is that of Old California for its arid sterility. The climate of the Pacific coast of N. America, being milder than that of the Atlantic, the inhabitants of New California enjoy more temperate seasons than do those of the U. S., from the Carolinas to Conn. inclusive. According to Humboldt, this is a very flourishing and valuable colony. The same chain of mountains which ranges through Old California, reach into and intersect also, New California. Monterey is the capital. Pop. 1805, 15,562.

California, Gulf of N. America, extends from the mouth of the Colorado river, between Sonora and Old California, in a south east direction 800 ms. It gradually widens from its head, at the mouth of the Colorado, to its mouth between Cape Palmo in Old California, and Mazatlan in Sonora, where it is about 120 ms. wide. It is full of islands and shoals, and is very difficult to navigate. From Old California, no stream of any great consequence enters this gulf; but from Sonora, it receives, beside the Colorado and Gila, the Ascension, Hiaqui, Agyo, Fuerte, Inaya, Culiacan, Iabala, Rostla; and a brook which forms Mazatlan harbour.

Calabar, fortress of the island of Ceylon, at the mouth of a river of the same name, 28 ms. S. of Colombo.

Calix, town of Sweden, in West Bothnia, on a river of the same name, near its entrance into the Gulf of Bothnia, 22 ms. W. of Tornea.

Calland's Store, psto. Pittsylvania cty. Virg., pstrd. 188 ms. SW. from Richmond.

Callah, town of Algiers, in the province of Mascara, which has a considerable trade, and the greatest market for carpets in the country. It is 40 ms. E. of Oran.

Callender, town of Stld., in Perthshire, with a considerable manufacture of muslin; seated on the river Teath, 30 ms. WSW. of Perth.

Callao, seaport of Peru, with the best harbour on the coast, and a large and safe roadstead defended by the islands Callao and St. Laurence. In the port every commodity is to be procured that vessels may be in need of. The town was almost totally destroyed by an earthquake, in 1746. It is seated on a river of the same name, 5 ms. Canada, or the province of Quebec. By the royal proclamation of the 7th of October, 1763, this province was bounded on the E. by the river St. John, and from thence, by a line drawn from the head of that river through lake St. John, to the S. end of lake Nipissing; from whence the line, crossing the river St. Lawrence and lake Champlain in the 45th parallel of N. lat., passes along the high lands which divide the rivers that empty themselves into the river St. Lawrence, from those which fall into the sea; and also along the N. coast of the Baye de Chaleurs, and the coast of the Gulf of St. Lawrence to Cape Rosiers; and from thence, crossing the mouth of the river St. Lawrence, by the W. end of the island of Anticosti, terminates at the river St. John.

An act of parliament passed in 1774, has removed the northern and western limits of the province of Quebec, adding to its jurisdiction all the lands comprised between the northern

bounds of N. Y., the western line of Penn., the Ohio, the Mississippi, and the southern boundaries of Hudson's Bay Company.

Canada, a general name for that part of Cabotia, or British N. America, lying in the basin of the St. Lawrence. This immense region lies between the parallels 42° and 50° N. and embracing about 30° of lon. The value of Canada, as a habitable country, is very inadequately estimated in the U. S. The soil and climate of U. C. bears a strong analogy with those features in N. York, and the New England states. Under the head of St. Lawrence, the commercial facilities of Canada are noticed. In brief, it is a country, on which a pop. of from 15 to 20 millions may be comfortably placed.

Canada is now divided into two provinces, called Lower Canada and Upper Canada.

Canada, Lower, extends from lat. 45° to 52° N., and from lon. 14° E. to $3^{\circ} 30'$ W. from W. C.; bounded S. by the U. S., W. by U. C., N. by the territories of the Hudson Bay Company, and E. by the Gulf of St. Lawrence; reaching about 500 ms. from S. to N., and 500 from E. to W., with an area of 120,000 sqns. It is divided into 4 large districts, Montreal, Three Rivers, Quebec, and Gaspé, which were again in 1792, subdivided into 21 cties., Bedford, Buckingham, Cornwallis, Devon, Dorchester, Effingham, Gaspé, Hampshire, Hertford, Huntingdon, Kent, Leinster, Montreal, St. Maurice, Northumberland, Orleans, Quebec, Richieu, Surry, Warwick, and York. The original grants of land in L. C., were made in general under the name of seigniories, upon the principles of feudal tenure and now compose a third species of civil division, next in order to the cties. The grants made by the British government since its domination in Canada, have been laid out in townships, and founded on free and common socage.

In a state of nature Lower Canada was covered with an immense forest of very lofty timber, much of which yet remains. The settlements extend along or near the streams, in general where the soil is most fertile, and means of navigation most attainable. In the angle N. from lat. 45° N. to the St. Lawrence river, the soil is generally very productive, and settlements advancing rapidly. Eastward of this triangle, to the Gulf of St. Lawrence, the country is hilly, broken, barren, and but very thinly settled. From the Mingan settlement, on the N. side of the Gulf of St. Lawrence, to a short distance above Quebec, the left shore of that great stream is rocky and precipitous. This range of hills leaves the river below the mouth of St. Maurice, and extends towards the Ottawa, which it intersects about 120 ms. above its junction with the St. Lawrence. A very productive body of land is enclosed between this ridge and the respective rivers. Beyond this latter tract, and the margin of the streams, the country to the northward is but very imperfectly known.

The civil government of Lower Canada, is administered by a governor, Lt. governor, executive council, and legislative council; appointed by the king; with a house of representatives, elected by the people.

Returns from the districts give Lower Cana-

da a pop. of 320,679 souls. The aggregate number of emigrants arrived at the port of Quebec in the last 7 years, is 68,534. A third of them, it is thought, have gone to the U. S.

Canada, Upper, commences at a stone boundary on the N. bank of the lake St. Francis, at the cove W. of Point au Bode, in the limit between the tp. of Lancaster and the seigniority of New Longueuil, running along the said limit in the direction of N. 34° W. to the westernmost angle of the seigniority of New Longueuil; thence along the north-western boundary of the seigniority of Vaudreuil, running N. 25° E. until it strikes the Ottawa river, and ascends by it into lake Timiskamian; and from the head of that lake by a line drawn due N. until it strikes the boundary line of Hudson's bay, including all the territory to the westward and southward of the said line, to the utmost extent of the country known by the name of Canada.

Upper Canada is divided into Eastern, Midland, Home, and Western districts, and subdivided into 19 cties., viz. Glengary, Stormont, Dundas, Grenville, Leeds, Frontenac, Ontario, consisting of the islands in the lake of that name, Addington, Lenox, Prince Edward, Hastings, Northumberland, Durham, York, consisting of two Ridings, Lincoln, consisting of four Ridings, Norfolk, Suffolk, Essex, Kent.

These cties. are divided into tps. ordinarily of 9 by 12 ms. They send 16 representatives to the provincial parliament, who, with a legislative council, are called together once every year. The representatives are elected for 4 years, to serve in the assembly, unless the parliament be sooner dissolved by the person administering the government.

The land in the tps. adjoining the St. Lawrence is, for the most part, fertile, and in as high a state of cultivation as can be expected from the time it has been settled; the first improvements being made since the peace of 1783, when all was in a state of nature, and heavily timbered.

There are now between 30 and 40 mills in the extent mentioned, on this river, the most remarkable of which are on the Gananoque. Good roads have been opened, and bridges well constructed; some of them over wet lands, and the mouths of creeks and rivers of very considerable extent; and the first settlers have been able, by their very great industry, to erect comfortable houses.

In the rear of the tps., on the St. Lawrence, are upwards of 20 others, in which settlements have commenced, to the southward of the Ottawa or Grand River, which many of them front; others are well supplied by the waters of the Rideau, and river Petite Nation, with the Gananoque lakes and streams, all of which afford abundance of situations for mills. These rivers, like most others in Canada, abound in carp, sturgeon, perch and catfish; the ponds affording green and other turtle, with fish of various sorts. The lands in their vicinity are differently timbered, according to their quality and situation. The dry lands, which are generally high, bear oak and hickory; the low grounds produce walnut, ash, poplar, cherry, sycamore, beech, maple, elm, &c. and in some places there are swamps full of cedar and cypress.

The banks of most of the creeks abound in fine pine timber, and the creeks themselves afford in general good seats for saw mills; materials for building are readily procured.

The heads of the rivers Radeau and Petite Nation, communicate by short portages, or carrying places, with the waters which fall into the St. Lawrence, and promise to afford great advantages to all kinds of inland communication. The forks of Radeau, about which are the tps. of Oxford, Marlborough, and Gower, promise to be, at some future period, an emporium for interior commerce.

The birch canoes, which go to the northwest country, pass up the Ottawa river with merchandise, and return with peltries.

All the tps. on the N. side of lake Ontario, are well watered by small streams, at the mouths of which are ponds, and low land capable of being drained and converted into meadows.

The number of inhabitants, 1806, was 80,000, composed chiefly of emigrants from New Eng. and N. J.

By an actual census of the pop. of this province, in 1825, it appeared that it then contained 157,541 inhabitants. It gained 6444 in the preceding year, having only 151,097, in 1824.

The air of all Canada has been noted for its purity and general serenity. The soil of such a vast extent, necessarily includes every variety; though the general character may be given as productive. Population has constantly, but irregularly advanced since the British conquest. In 1763, it was supposed to contain about 70,000 inhabitants; in 1775, 90,000 and in 1814, 335,000. The two provinces are now inhabited by 478,220 souls, agreeable to the new data introduced into this article. As the documents upon which these results are founded were taken near, or quite, two years past, we may very safely allow for all Canada in 1826, half a million of inhabitants. Of this mass, more than a majority, are descendants of the original French emigrants, who with a considerable part of those from the British islands, render the Roman Catholic religion most prevalent in the colony. This ritual is under the pastoral guidance of one bishop, nine vicars general, and upwards of 200 parochial curates.

For the defence of the Canadas, a regular military establishment is maintained by the British government, amounting in common to between 20,000 and 30,000 men. This force is stationed at various points, along the great line of the St. Lawrence. The commerce of the Canadas, is confined at present, to one outlet, the St. Lawrence. The completion of the Grand Canal of N. York, will slowly divert a share and by far the greatest share of the trade of the Upper Province to N. York. The exports of this extensive country, have been augmenting in more than a ratio with the mean increase of population. In 1769, they amounted to 163,105*l*. and in 1815, to 1,156,000*l*. and the imports, to upwards of 600,000*l*.

Candahar, rich trading city of Asia, capital of a kingdom of the same name. While the Persian and Mogul empires were severally undivided, it was the frontier fortress of Hindoostan towards Persia; and was esteemed the key of the western provinces of the latter, and not unfrequently changed masters, although very strong by situation, being surrounded by fens and rocks. It is 145 ms. SW. of Cabul. *Lon.* 67° 15' E. *lat.* 33° N.

Candahar, kingdom of Asia, between the river Indus and Persia, bounded on the N. by Cabul, on the E. by Lahore, on the SE. by Multan, and on the W. by Persia. The dominions of the king of this country extend westward to the neighbourhood of the city of Tarshish; including generally Cabul, Candahar, Chizni, Caur, Paishawur, Korasan, and Seistan: this tract is not less than 800 ms. in length, its breadth is not well known, and on the E. side of the Indus, he possesses the territory of Cashmere, and some districts above the city of Attock. Ashmed Abdalla the founder of this kingdom, was originally the chief of an Afghan tribe, named Abdal, (whence Abdal) who was stript of his country by Nadir Shah, in 1749. On the death of Nadir, he suddenly appeared among his former subjects, and erected a considerable kingdom in the eastern part of Persia, adding to it most of the provinces to the W. of the Indus, which had been ceded by the Great Mogul to Nadir Shah, together with Cashmere on the E. of that river.

Candia, island in the Mediterranean, formerly Crete, and to the S. of the Archipelago. The capital of the same name, though populous formerly, is little better than a desert, there being nothing but rubbish, except at the bazar or market-place; and the harbour of Candia is now fit for nothing but boats; but the walls of the towns are standing, and it is the see of a Greek archbishop. The products are corn, wine, oil, wool, silk, and excellent honey. The climate of Candia is delightful. The heat is never excessive; and in the plains violent cold is never felt. In the warmest days of summer the air is cooled by breezes from the sea. Except December and January the whole year is one continued fine day. The sky is always unclouded and serene; the winds, mild and refreshing breezes. The mountains are covered with a great number of odoriferous plants. In a word, from the hills, the vales, and the plains, on all hands there arise the most exquisite perfumes, which embalm the air, and render it a luxury to breathe it. Candia is 200 ms in length, and 50 in breadth. It is 500 ms SW. of Constantinople. *Lon.* 25° 18' E. *lat.* 35° 18' N.

Cardiganshire, *cty.* of S. Wales, bounded on the N. by Merionethshire and Montgomeryshire, on the E. by Radnorshire and Brecknockshire, on the S. by Carmarthenshire, and Pembroke-shire, and on the W. by Cardigan Bay. It extends 17 ms. from N. to S. and 20 from E. to W.; and is divided into five hundreds, containing six market-towns, and 64 parishes, extending over 500,000 acres. It lies in the diocese of St. David's, and sends two members to parliament. The air is milder here than in most parts of Wales. To the S. and W. are plains fruitful in corn; but the N. and E. parts are a continued ridge of mountains, however there are cattle bread in all parts; but they have neither wood nor coals of their own for fuel. They have fish in plenty, with fowls both tame and wild. Near the rivers are great numbers of otters; and in the valleys are several lakes. The mountains abound with veins of lead and silver ore; and the mines have been worked several times to great advantage. Sir Hugh Middleton is said to have cleared 2000l. a month, for several years together, which enabled him to bring the New River water to London; but he expended the whole on that great object. The principal rivers are the Tyvy, the Idydl, and the Istwith. Pop. 1801, 42,956; in 1811, 50,260; and in 1821, 57,311.

Cardena, town of Spain, in Cataluña, with a castle. Near it is an inexhaustible mountain of salt, of several colours, which, when washed, becomes white; and there are vineyards, which produce excellent wine. Carlswitz, town of Slavonia, seated on the Danube, 38 ms. NW. of Belgrade. Lon. $20^{\circ} 5' E.$ lat. $44^{\circ} 45' N.$

Carlscrona, or *Carlskroon*, seaport of Sweden, in the province of Blekingen. It derives its origin and name from Charles XI. who first laid the foundations of a new town in 1680, and removed the fleet from Stockholm to this place, on account of its advantageous situation in the centre of the Swedish seas. The town contains about 11,000 inhabitants, and the suburbs are fortified, toward the land, by a stone wall. Formerly, vessels in this port, when careened and repaired, were laid upon their sides in the open harbour, until a dock was hollowed in the solid rock, in 1724, capable of receiving a first rate man of war. A project for constructing 30 covered docks, and other improvements, was begun in 1759: but they have proceeded slowly. One dock was finished in 1779, and gives an idea of the expense and greatness of the plan; the bottom and sides are of hewn granite; rows of granite pillars support the roof, and bear rather the appearance of a colonade to a temple, than a receptacle for ships. Carlscrona, is 220 ms. SW. of Stockholm. Lon. $15^{\circ} 26' E.$ lat. $56^{\circ} 20' N.$

Carlstadt, capital of Croatia, on the river Kulp, 140 ms. S. of Vienna. Lon. $15^{\circ} 21' E.$ lat. $56^{\circ} 2' N.$

Carnatic, country of the peninsula of Hindoostan, extending from the Guntoor circar, along the whole coast of Coromandel, to Cape Cormorin; including its appendages, which are Tanjore, Maravar, Trichinopoly, Madura, and Tanavelley. It is 570 ms. from N. to S. but no where more than 120 wide, and commonly no more than 75. The annual revenue of the nabob of Arcot, its sovereign, is stated at about 1,500,000*l.*, out of which he pays a subsidy of 160,000*l.* to the English E. India Company, towards the expense of their military establishment. The British possessions in the Carnatic are confined chiefly to the tract called the Jaghire, whose annual revenue is 150,000*l.* There is, besides, a land revenue dependent on Madras, of 725,000*l.* The Carnatic is rich, fertile and populous; and contains an incredible number of fortresses; public monuments too, the unequivocal marks of civilization and opulence, are more common here than in the northern parts of India. In 1787, the E. India Company took the whole administration of the Carnatic, and the collection of the nabob's revenues into their own hands. Arcot is the capital.

Carnesville, pstr. and seat of justice, Franklin city. Geo. on one of the head branches of Broad river, by pstrd. 110 ms. N. from Milledgeville. Lat. $34^{\circ} 26' N.$ lon. W. C. $6^{\circ} 38' W.$

Extreme length 420 ms., from the SW. angle of Haywood cty. to Cape Hatteras. The area being about 45,500 sqms.; the mean width must be about 110 ms. The greatest breadth, is from Little Inlet, N. lat. 33° 50' to the Virg. line, N. lat. 36° 30', equal to 160 minutes of lat. or 184 statute ms. nearly.

Except Georgia, there is no other state in the Union which presents so marked a difference of soil and climate as does N. C. Similar to the other states S. from N. Y., which have an ocean limit, this state is naturally subdivided into the alluvial, hilly, and mountainous sections.

The following Tables exhibit the relative and aggregate population of N. C., with the comparative area in sqms. of its cties. and natural sections.

TABLE IV. SUMMARY OF N. C.

Population in 1820.

| Sections. | Area in sqms. | Whites. | Free col'd. per-sons. | Slaves. | Total. |
|-------------|---------------|---------|-----------------------|---------|--------|
| Alluvial | 22743 | 163559 | 10009 | 113830 | 287398 |
| Hilly | 13057 | 165980 | 4582 | 79720 | 250282 |
| Mountainous | 10189 | 85025 | 515 | 15677 | 101217 |
| Amount | 45989 | 414564 | 15106 | 209327 | 638897 |

This summary shows, the eastern or alluvial section is peopled by about 12 to the sqm., the two coloured classes being to the whites, as 1 to 4 nearly. On the middle or hilly section, the aggregate pop. is 19 to the sqm. the coloured classes being to the whites as 1 to 2 nearly. On the western or mountainous section, the aggregate pop. is about 10 to the sqm., the coloured classes being to the whites, as 1 to 5 nearly. In the whole state, we find, that in 1820, it was peopled by about 14 to the sqm.; whilst the coloured pop. was to the white in a proportion of 1 to 2 within a very small fraction.

It must be obvious on a glance upon a good map of N. C. that the temperature of its seasons must be very much influenced by difference of level from the Atlantic coast to its western section. Without estimating the elevation of the mountain ridges, we may safely allow a difference of 1000 feet between the ocean level and the table land of the western section. A difference of 1000 feet in relative height, is more than equivalent to $2\frac{1}{2}^{\circ}$ of lat. and accounts for the fact, that the seasons of western Virg. and N. C. are nearly similar to those along the Atlantic coast from N. lat. 38° to 40° .

The salubrity of the air is in a peculiar manner influenced in N. C. by the great difference of its relative level. The middle and mountainous tracts are highly salubrious, and well watered; and indeed a character of healthiness is due to the whole state, with the exception of autumnal fevers near the Atlantic shores.

The vegetable productions of this state, are perhaps more numerous, specifically, than those of any other state in the U. S. Towards the Atlantic, and as far W. as into the middle section, cotton can be produced as a staple. As the mountain table land is approached, the summers are more contracted, and grain becomes the staple. Fruits of every kind, from the apple to the fig, grow on the diversified surface of N. C. As a commercial state, however, its want of capacious harbours must prevent an advance equal to states more advantageously indented by deep bays and rivers.

Through the sea-sand border, the rivers find their way to the sea, over extensive flats and bars, rendering the coast of this state the least favourable to navigation of any of the maritime states of the U. S. Cape Fear river, with 18 feet water over its bar, is the best entrance into the interior of N. C. Extensive canal improvements have been projected, and partially executed; but hitherto, the trade of the northern waters of N. C. has centered in Virg.; whilst that of the interior of the state has generally found its discharge at Charleston, in S. C. Laudable efforts are making, to open an easy and direct communication with the Ocean, which the advance of wealth and pop. will no doubt ultimately effect.

The interests of education, formerly much neglected, are at present fostered in this state. Besides the University of N. C., there are upwards of 50 Academies in operation. The government of the state, is essentially similar to the other states of our confederacy, consisting of a senate and house of commons, annually chosen. The governor is rather the creature of the legislature than the people, being chosen by joint ballot of both houses. The staples of this state are, some grain and flour, tar, pitch, turpentine, lumber, and tobacco. Capital, Raleigh. N. lat. $35^{\circ} 44'$, lon. W. C. $1^{\circ} 48' W$.

Carolina, South, one of the original States of the U. S. of N. America, bounded SE. by the Atlantic ocean, SW. by Geo., and N. and NE. by N. C. S. C. has an ocean border from Little Inlet, to the mouth of Savannah river, 185 ms. Along Sav. river, in common with Geo. 200 Along N. C. 300

Having an entire outline of 685

The greatest length of this state is from SE. to NW. 240 ms. Its mean width about 115 ms., and area 28,000 sqms. Lying between N. lat. 32° and $35^{\circ} 12'$.

S. C. like N. C. is naturally divided into three sections, those of the sea sand alluvion; hilly above the river falls, and mountainous. The former extends from the coast about 100 ms. and is intersected by a number of rivers, winding in sluggish channels towards the sea coast. None of the rivers in this state, are navigable to any considerable distance inland. The Santee, is united to the harbour of Charleston, by a canal 22 ms. in length. This artificial channel, opens to Charleston the commerce of the interior of both N. and S. C. The ridge of hills, give rise to the appropriate distinction of lower and upper country, differing from each other in every essential respect. The lower country, with a soil flat and sandy, covered with pine, is in general sterile, interspersed with marshes, and in summer and autumn, more or less unhealthy. The hilly region, is ushered in advancing from the sea coast by the sand hills, or hillocks, which extend for 20 or 30 ms., and gradually merge into other and more elevated hills, which lead into a finely diversified, fertile, well watered, and healthy country. This latter region, is terminated by the mountains, which are confined to the extreme NW. angle of the state. On the lower or sandy tract, the banks of the streams are in many places composed of excellent soil, upon which rice and cotton are extensively cultivated. The middle, or sand hill zone, partakes of the general character of the sea sand alluvion, with the exceptions noted, both have an arid and barren aspect. The soil of the upper country is most productive; cotton is there also the common staple.

The following tables exhibit the relative sections of S. C. with the classified and aggregate population agreeable to the census of 1820.

TABLE No. IV. SUMMARY OF S. C.

Population in 1820.

| Districts. | Area in square Miles. | Whites. | Free col'd. per'ns. | Slaves. | Aggreg. |
|-------------|-----------------------|---------|---------------------|---------|---------|
| Alluvial | 8950 | 43241 | 4451 | 132657 | 180329 |
| Hilly | 12950 | 101537 | 1801 | 89013 | 192351 |

| Amount | 28245 | 237892 | 6805 | 256457 | 501154 |

The preceding summary gives to S. C. an aggregate pop. of upwards of 17 to the sqm. The coloured classes exceeding the white as 26 to 25 nearly; this being the only state of the U. S. where the former are in excess. The distribution of classes are, however, very unequal on the respective natural sections. On the alluvial section, the coloured classes exceed the whites above three to one. In the central or middle section the whites exceed as 10 to 9 very nearly. In the mountain section are nearly 3 to 1 in excess.

The aggregate pop. on the alluvial section, is about 20 to the sqm; on the central section, not quite 15 to the sqm. The best populated section of the southern states, is the western, or mountainous section of this state, amounting to upwards of 21 to the sqm.

The general observations respecting the natural sections of N. C., may be repeated, with little variation or addition, and applied to S. C., with the exception, that a nearer approach to the tropics is visible on vegetation, advancing from the former into the latter state. Under the head of Georgia, the reader will find a more ample notice of the climate of that section, and that of the southern states generally.

As a commercial state, S. C. has some great advantages in its numerous bays, or rather estuaries. Charleston harbour, is one of the most convenient on the Atlantic coast, for vessels under 16 feet draught. Georgetown and Beaufort, are also ports affording entrance into the most productive districts of the state. With N. C. terminates those deep bays and sounds, which penetrate the U. S., from that state to the NE. The rivers of S. C. and Georgia, enter the Ocean by narrow, and generally shallow outlets. Tide water crosses in most of the larger streams the alluvial land is arrested by the line of falls, which terminate that species of soil, and commence the hilly tracts. The Savannah, Santee, and Pedee, all rise beyond the northwestern limits, of S. C., and give to this state a river navigation in all its extent. Many minor streams rise and enter the ocean between these great rivers, amongst which may be mentioned as pre-eminent, Ashly and Coopers, forming the harbour of Charleston.

In proportion to extent of surface, S. C. is a very productive state. In 1818, its exports placed it in the third rank of agricultural value. The principal staples are, cotton, rice, lumber, pitch, tar, turpentine, maize, and other minor articles. Charleston, is the most extensive seaport of the U. S., on the Atlantic border, S. of Baltimore. Columbia is the seat of government.

Schools are numerous in S. C.; and at Columbia, Beaufort, Abbeville, and Williamsburgh, colleges have been erected. Collegiate establishments have, however, in most cases languished in the southern sections of the U. S. Thirty thousand dollars have been appropriated in S. C., by legislative benefactions, to support free schools.

Carrollton, pstv. Green cty. Ill. 50 ms. W. from Vandalia.

Carron, river of Stld. in Stirlingshire, which rises on the S. side of the Champsey Hills, and flows into the frith of Forth, below Falkirk. Its stream is small and scarcely deserves the notice of the traveller, yet there are few rivers which have been the scene of so many memorable transactions. When the Roman empire was in its glory, the banks of Carron were its boundaries on the NW., and Antonius' wall, which was raised to mark the limits of that vast empire, ran parallel to this river for several ms. Two ms. from its source it forms a fine cascade, called the Fall of Anchinilly.

Carron, village of Stld. in Stirlingshire, remarkable for its extensive foundery, belonging to the Carron Company, on the river Carron, 1 mile from Falkirk, consisting of the greatest iron works in Europe. All sorts of iron goods are made in it, from the most trifling article to a cannon that discharges a ball of 42 lbs. The short piece of ordnance called a carronade, was first made here, and hence received its name. These works were erected in 1761, before which time there was not a single house on the spot. At present the buildings are of vast extent, and the machinery, constructed by Mr. Smeaton, is the first in Britain, both in elegance and correctness; 6500 tons of iron are smelted

annually from the mineral with pit-coal, and cast into cannon, cylinders, &c.; in one place, where coal is converted into coak, by discharging it of its sulphur, and the fire spreads of course over a large surface, the volumes of smoke, the spiry flames, and the suffocating heat of the glimmering air, are wonderfully affecting; and at night its glare is inconceivably grand. How vast the fire is we may conceive when we are told that it often burns 100 tons of coal in a day. The fire of the furnace being thus roused becomes a glowing spot, which the eye can no more look at than at the sun. Under such intense heat the rugged stone instantly dissolves in streams of liquid iron.

Carrying river, sometimes called *Portage river*, river of Ohio, flows into the SW. part of lake Erie.

Carthage, pstv. Tuscaloosa cty. Al., 50 ms. NW. from Cahaba.

Carthagenus, seaport of Spain, in Murcia, built by Asdrubal, a Carthaginian general, and named after the city of Carthage. It has the best harbour in Spain, but nothing else very considerable. It is seated on a gulf of the same name, 27 ms. S. of Murcia. Lon. $0^{\circ} 8'$ W. lat. $37^{\circ} 57'$ N.

Carthagena, a province of S. America, in Colombia, bounded on the W. by the isthmus of Darien; on the NW. and N. by the Caribbean Sea; on the E. by Santa Martha; and on the S. by Antioquia. Pop., whites, 70,000; civilized Indians, 15,000; and about 8,000 black slaves.

Carthagena, capital of the province of Carthagena, in Colombia, one of the most populous, opulent, and beautiful cities in S. America. Its harbour is one of the safest and best fortified in the republic of Colombia. This was not the only circumstance to which Carthagena owed its splendour and importance; it was chosen as the port in which the galleons should first begin to trade, on their arrival from Europe, and to which they were directed to return, in order to prepare for their voyage homeward. The fortifications, both of the city and suburbs, are built after the modern manner and lined with free stone. The streets are broad, uniform, and well paved. All the houses are built of stone or brick, only one story high, neat, and furnished with balconies of wood, which is more durable in that climate than iron, the latter being soon corroded by the acrimonious quality of the atmosphere. It was taken by the English in 1585, and by the French in 1697, who found a great booty: but admiral Vernon, in 1741, though he had taken the castles, was obliged to abandon the siege. Lon. W. C. $0^{\circ} 24'$ E. lat. $10^{\circ} 24'$ N.

Cartmel, town of Eng. in Lancashire, among the hills called Cartmel Fells, not far from the sea, and near the river Kent, 12 ms. N. by W. of Lancaster, and 266 N. W. of London. Lon. $3^{\circ} 0'$ W. lat. $54^{\circ} 12'$ N.

Carters, pst. Plymouth cty. Mass. Pop. 1810, 268, in 1820, 259.

Cartwar, seaport on the coast of Malabar, subject to the regent of Mysore. It is 60 ms. S. by E. of Goa. Lon. $74^{\circ} 34'$ E. 15° N.

Casula. See *Cosdunga*.

Cassa Grande, ruins of Mexico, in Sonora, on the Rio Gila. These very extensive and curious remains are evidently of Aztec construction, though separated above 1000 ms. from the other existing monuments of that anciently civilized people. The ruins, which are known by pre-eminence as la Casa Grande, are situated on a plain near the bank of the Gila. Lon. W. C. $36^{\circ} 25'$ W., lat. $33^{\circ} 40'$ N. See *Ruins of America*.

Casul, town of Italy in Montserrat, on the river Po, 37 ms. NE. of Turin. Lon. $8^{\circ} 27'$ E., lat. $45^{\circ} 18'$ N.

Casal Maggiore, town of Italy in the duchy of Milan, on the river Po, 20 ms. SE. of Cremona. Lon. $10^{\circ} 35'$ E. lat. $44^{\circ} 36'$ N.

Casal Nuova, town of Naples, in Calabria Ulteriore.

Casanara, or *Cassinare*, river of S. America in Colombia, rises in the mountains of Varinas, and flows E., through the plains of Casanara, and falls into the Meta, about 200 ms. above the junction of the latter with the Orinoco.

Casbin, or *Casvin*, a town of Persia, in Irac Agemi, encircled by a wall four ms. in circuit. It carries on a great trade, and is seated near the high mountain Elwend, where there are fine quarries of white marble, 180 ms. N. of Ispahan. Lon. $52^{\circ} 16'$ E. lat. $35^{\circ} 30'$ N.

Cascais, town of Portugal, in Estramadura, at the mouth of the Tajo, 17 ms. E. of Lisbon. Lon. $8^{\circ} 43'$ W. lat. $38^{\circ} 40'$ N.

Caschuw. See *Casovia*.

Casco Bay, bay of Maine, between Cape Elizabeth and Cape Small Point. It is 25 ms. wide, and interspersed with small islands. Lon. $69^{\circ} 30'$ W. lat. $44^{\circ} 5'$ N.

Caslagu, creek in Chataque cty. N. Y., the middle branch of Conewango creek, rises within 5 ms. of Lake Erie, and flowing SSE. 20 ms. joins the outlet of Chataque lake, and both unite with the Conewango 5 ms. N. of the northern boundary of Penn.

Casdaga, psto. on the Casdaga creek, is about 60 ms. SSW. from Buffalo.

Casery, cty. Kent, bounded by Adair and Washington W., Mercer N., Lincoln NE., and Pulaski SE.; length 30 ms, mean width 12; area 360 sqms.; surface hilly, soil productive. Chief town, Caseyville. Pop. 4349.

Caseyville, vil. and seat of justice Casey cty. Kent. Lat. $37^{\circ} 22'$ N. lon. $7^{\circ} 32'$ W.

Cash, river of Illinois, rises in Union, flows SE. into Johnson, and thence SW., W., S. and SE. into Ohio in Alexander cty.

Cashel, town of Ireland, in Tipperary, with an archbishop's see, 13 ms. NW. of Clonmel. Lon. $7^{\circ} 33'$ W., lat. $52^{\circ} 26'$ N.

Cashgur, or *Cashgar*, city of Asia, capital of a country of the same name. It stands at the foot of the Himala mountains, and enjoys a good trade with the neighbouring countries. Lon. $73^{\circ} 23'$ E. lat. $41^{\circ} 30'$ N.

Cashmere, province of Hindoostan Proper, subject to the king of Candahar, bounded on the W. by the Indus, on the N. by the Himala mountains, on the E. and S. by Lahore. The valley or country of Cashmere is 80 ms. long,

and 40 broad; and is celebrated for its romantic beauties, the fertility of the soil, and the temperature of the atmosphere. Particulars may be accounted for, when it is considered, that it is an elevated and extensive valley, surrounded by steep mountains that tower above the regions of snow; and that its soil is composed of the mud desposited by a capital river, which originally formed its waters into a lake that covered the whole valley, until it opened itself a passage through the mountains, and left this fertilized valley an ample field to human industry, and to the accommodation of a happy race. It appears that the periodical rains, which almost deluge the rest of India, are shut out of Cashmere by the height of the mountains, so that only light showers fall there; these however are in abundance enough to feed some hundreds of cascades, which are precipitated into the valley, from every part of this stupendous and romantic bulwark that encircles it. The soil is the richest that can be conceived, and its productions those of the temperate zone. A vast number of streams, from all quarters of the valley, bring their tribute to the Chelum, the parent of the soil, and a large navigable river. Many lakes are spread over the surface, and some of them contain floating islands. In a word, the whole scenery is beautifully picturesque; and a part of the romantic circle of the mountains makes a part of every landscape. All Cashmere is holy land, and miraculous fountains abound. They are constantly subject to earthquakes; and, to guard against the most terrible effects, all their houses are built of wood. Among other curious manufactures of Cashmere is that of shawls; and the delicate wool of which they are made, is the product of a species of goat of this country, or of the adjoining Thibet. Here are bred a species of sheep, called Hundoo, which are employed in carrying burdens. The Cashmereans have a language of their own, said to be anterior to that of the Sanscrit; and a religion too, it is thought, different from that of the Hindoos.

Cashmere, large city of Hindoostan Proper, capital of the province or valley of Cashmere. It is seated on both sides of the Chelum, 285 ms. E. by S. of Cabul. Lon. $73^{\circ} 11'$ E. lat. $33^{\circ} 49'$ N.

Cashna, extensive empire of Africa, part of the region called Negroland; bounded on the N. by Fezzan and Zahara, on the S. by the Niger, and on the E. by Zamphara and Bornou. It resembles Bornou in climate, soil, and natural productions, and in the colour, genius, religion, and government of the people. The rains, indeed, are less violent than those of Bornou. A thousand towns and villages are said to be included in this empire, which, like Bornou, consists of different tribes or nations, subject to the dominion of one ruling power. This country is known in our books, by the names of *Cashna*, *Cashna*, *Wassanah*, *Wangara*, *Gangara*, &c.

Casimir, town of Poland, in the palatinate of Lublin. Lon. $22^{\circ} 3'$ E. lat. 51° N.

Caspian Sea, great inland sea of Asia; bounded on the N. by the country of the Kalmucks, on the E. by a tribe of the Turcomans, on the S. by Persia, and on the W. by Georgia and Circassia. It is 690 ms. in length, reckoning from Grief to Medshetifar, and in no part more than 260 ms. in breadth. It has no tide; and, on account of its frequent shoals, is navigable only for vessels drawing from 9 to 10 feet water; it has strong currents, and its water is salt. There are certain winds that domineer over it with such absolute sway, that vessels are often deprived of every resource, and in the whole extent of it there is not a port that can truly be called safe. The surface of this lake or sea, has been found by recent admeasurement, upwards of 320 feet depressed below that of the Euxine or Black sea.

From a very common opinion that Lake Superior in N. America was equal in extent to the Caspian, I have taken some pains to measure both; and the following is the comparative result: The Caspian extends from N. lat. $37^{\circ} 15'$ to $47^{\circ} 10'$, or within a small fraction of 10° of lat., 690 ms. The mean width is at least 180 ms. These dimensions yield an area of 124,000 sqms. Lake Superior lies in form of a triangle. Base from the outlet of St. Mary's to the mouth of St. Louis river 350 ms. The perpendicular from the mouth of Redstone river to the base 150 ms. Area 26,000 sqms.

So far in fact, is any one of the Canadian lakes from being equal to the Caspian, that the entire area of Superior, Huron, Michigan, Erie and Ontario, only amount to about 90,000 sqms, and of course, when taken together, are to the Caspian as 90 to 124, or two-thirds very nearly. See *Black Sea*.

Caspian, lake, Ver., in Greensborough, Ca. ledonia city.

Caspian Basin. This great section of the habitable earth is peculiar in being greatly the largest extent having no oceanic communication. From every appearance of the intermediate space, it is obvious that the Aral and Caspian once formed a single sheet of water. The Oxus or Jihon discharged one of its branches into the Caspian until within 5 centuries past, accumulating sand and diminution of its level have closed this inlet into the Caspian, and at present, the entire flood of the Jihon enters the Aral. In every geographical point of view, however, the Aral and Caspian basins ought to be considered as one natural section of the terraqueous earth. Taken with this latitude, the Basin of the Caspian extends from the sources of the Jihon, N. lat. 36° , to those of the Kama, N. lat. 61° , embracing 25° deg. of lat. The greatest length from the mountains of Indostan to the extreme northern sources of the Volga, 2,500 ms. in a direction of NW. and SE. It is bounded on the NE. by the Imans or Belur Dag; and Ural Mountains; on the SE. by the mountains of Indostan; on the SW. by the Caucasus, or its embayments into Persia, and on the NW., the Valday hills separate the confluent of the Baltic and White Seas from the sources of the Volga and Kama. This immense space, averages at least 1000 ms. of mean width, and 2,500,000 sqms. in area. The most remarkable rivers of this basin are.

in Europe, the Volga, flowing into the Caspian; in Asia, the Ural, Kur, Kizil Ozein and Tredjend entering the Caspian, and the Jihon and Sihon into the Aral sea. See those rivers under their respective heads.

Similar to the Mediterranean, Black, and Baltic seas, the Caspian has no tides, or at least none worthy notice. Near the shores it is shallow, and being subject to violent tempests, its navigation is dangerous and difficult. This deficiency is amply compensated by the rivers, particularly the Volga. This great stream by all its branches, the Kama, Oka, and Volga proper, presents the most unbroken river navigation on the eastern continent. The Oxus or Jihon is also a river of considerable magnitude, and flowing NW. from Indostan, might in the hands of a civilized people, form part of a line of commercial communication between Europe and Asia; but from the northern shores of the Caspian to Indostan all is barbarism, slavery and ruin.

In one circumstance, the Caspian basin is peculiar. The surface of that inland sea is the lowest depression on this planet, being as is already stated under the head of *Black Sea*, 320 feet lower than the surface of the Black sea. The water of the Caspian is considerably less salt than that of the Atlantic ocean.

Catahoala, parish of Lou. bounded by Concordia E. and SE., Rapides S. and SW., and by Ouachitta, NW. and N.; length 80 ms. mean width 25; area 2000 sqms. Surface hilly, in the SW. part, and level in the NE. It is nearly intersected into 2 equal sections by Ouachitta river. The soil is in general extremely sterile, and covered with pine timber. Some very productive tracts lie along the streams, upon the small prairies, and on Sicily Island. Staples, cotton, live stock, and lumber. No town of any consequence. See *Ocatahoala*. Pop. 1820, 2287. Ctl. lat. 32° N. lon. W. C. 15° W.

• *Catahoala*, river of Lou., rises in the parishes of Nachitoches and Ouachitta, and flowing SE. enters the parish of the same name, expands into a lake 30 ms. in length by from 3 to 6 ms.

wide, turns E. contracts again to a river of about 70 yards wide, flows 10 ms. and joins the Ouachitta and forms Blackriver, after an entire comparative course of 120 ms. The country drained by the Catahoula is generally sterile pine woods. See *Ocatahoula*.

Catahoula, lake of Lou. This lake is remarkable. It is a natural reservoir, filled and emptied by turns. When the Mississippi river is rising, it throws a volume over the intermediate space into the Ouachitta, which thus swelled, forces the current to repulse into the Catahoula lake, which then becomes filled, but as the Mississippi depresses, the water drains from the lake, and in autumn, its bottom becomes one great meadow of succulent herbage, with the river winding its devious way through its wide spread plain.

Catahou, river of N. and S. C., rises in the latter, and flowing SE. by S. into the latter, takes the name of Wateree, joins the Congaree, and together forms the Santee. See *Wateree*.

Cateau. See *Chateau Cambresis*.

Categate, gulf between Sweden and Denmark, by which the Baltic communicates with the ocean. There is some confusion in our geo-

graphical works, as respects what is included under the names of Categate and Schagerac, as they are frequently confounded, though really distinct. The Categate is bounded S. by the Danish islands, W. by Jutland, E. by Sweden, and N. by the Schagerac. Mean length 120 ms., mean width about 50, and covering an area of 6000 sqms. The Categate is shallow. Along the Jutland coast extends a reef with not more than from 3 to 4 fathom; the depth is greater on the Swedish shore, but the general average would fall below 25 fathom, or 150 feet. If the diminution is equal in the Categate, to that shown to take place in the Baltic, less than 400 years will leave the former a sand bank, and in the intermediate time, the current through the Sound, and the two Belts must increase in velocity, towards the point of greatest depression. See *Earth, Schagerac*.

Charleston, district, S. C., between Santee and Combahee rivers, bounded by the Atlantic ocean SE., Colleton SW., Orangeburgh and Sumpter NW., and Santee river, or Williamsburgh, and Georgetown districts NE.; length 85½ ms., mean width about 30; area, 1750 sqms.; surface, in general, level, part flat, and marshy,

or sandy. The soil partakes of the variety of features; some tracts are in a high degree productive; in general it is, however, of middling quality. Staples, rice and cotton. Chief town, Charleston city. Pop. 1820, 55,432. Ctl. lat. $33^{\circ} N.$ and lon. W. C. $3^{\circ} W.$ intersect almost exactly in the centre of this district.

Charleston, City, and seaport, Charleston district, S. C., at the junction of Cooper and Ashley rivers. Lon. W. C. $2^{\circ} 54' W.$, $79^{\circ} 54' W.$ from London, lat. $32^{\circ} 50' N.$; 112 ms. SSE. from Columbia, and 550 SSW. from Washington. Ashley river is navigable 20 ms. above the city by vessels of considerable burden; but being placed on a low spot of ground, and in the vicinity of the Ocean, it is subject to be inundated by high tides, and has often suffered from this cause, as well as by fires and tremendous whirlwinds. The harbour is united to Santee river by a fine navigable canal, 22 ms. in length, which opens to its merchants the trade of the interior of S. C. and N. C. The harbour has two channels of entrance, the deepest of which admits vessels drawing 16 feet water. The entrance of the harbour is defended by a fort on Sullivan's Island, about 6 ms. below the city. This fort repelled the attack of a British fleet under Sir P. Parker, in the revolution war, with a very destructive effect to the assailants.

Charleston is, nevertheless, a capital of great riches and commerce; the exports of 1802 amounting to \$7,811,108, and in 1815, its tonnage exceeded 36,400 tons.—The banks of the rivers, above and below the town, are beautified with fine plantations, and walks interspersed with rows of trees. The streets that lie E. and W. run in straight lines from river to river, and are intersected by others at right angles, though they have one common fault of being too narrow, some of them being not above 15 feet wide. Most, if not all of them, are provided with subterranean drains that carry off the water and filth of the city. The houses lately built are principally of brick, and some of them in a style of comparative grandeur and elegance. The chief public edifices are an exchange, a state-house, a bank, an armoury, and a public almshouse, with ten or a dozen places of religious worship. Here are two banks besides a branch of the United States' bank.

The Orphan Asylum is a very respectable foundation, consisting of a large and spacious building, where 150 children are protected, clothed, fed, and educated; A Library Society, formed some years past, have now a library exceeding 1,000 volumes. This city has kept full pace with the other great seaport towns of the U. S. In 1790, the inhabitants amounted to 16,359, in 1800, to 18,711. Its subsequent advance is seen by the annexed table.

Cherson, capital of New Russia, in the government of Catharineslaf. It is a new town erected by Catharine II. on the N. bank of the Dneiper, 10 ms. below the mouth of the Ingulec. It is intended to be the principal mart of all the commodities of export and import. It has a dock, for the construction of large vessels from which several men of war and merchant ships have been already launched. It is supplied with fuel by reeds only, of which there is an inexhaustible forest in the shallows of the Dneiper, opposite the town. Rails, and even temporary houses, are made of them. They are tall and strong, and afford shelter to various kinds of aquatic birds, some of which are very beautiful. The fortifications are made, and the plantations formed, by malefactors, who amount to some hundreds. In 1787, the empress made a triumphant journey to this capital, and met the emperor Joseph II. Her intention, it is said, was to be crowned here queen of Taurica, and empress of the East. But the design, whatever it was, did not take place: and she was content to have inscribed over one of the gates of the city, "Through this gate lies the road to Byzantium." In this place, in 1790, the excellent Mr. Howard, so well known for his plans of reform of the different hospitals and prisons of Europe, fell a victim to his indefatigable humanity. *Cherson* 1850 ms. Cheviot, Eng., district in Northumberland, to the SW. of Wooler, on the borders of Stld., famous for the free chase, much used here by the English and Scots gentry. The adjacent country being hilly is called the Cheviot Hills, of which one is so high that it is seen 60 ms. off, and is the first land discovered by ships coming from the E. This is the Cheviot famous for the fierce encounter between the English and Scots under the earls Percy and Douglas, which is celebrated in the ballad of Chevy Chase.

Chevrotere, river, L. C., flows into St. Lawrence from the N., 40 ms. above Quebec.

Chiapa, province of Guatemala; bounded NW. and N. by Vera Cruz, E. by Yucatan, SE. by Vera Paz, SW. by Guatemal Proper. It is an inland country, drained by the Sumasinta and Tabasco rivers, flowing into the Gulf of Mexico. Ctl. lat. $16^{\circ} 30'$ N.

Chiavenna Laghetto di, small lake of the country of the Grisons, in Switzerland, near the town of Chiavenna, remarkable for its delightful views, which are wild and magnificent. It is surrounded by barren rocks, craggy, and rising into spires sprinkled with snow. The bases of these dreadful precipices are lost in the overshadowed water, dangerous on account of its malignant vapours, and affording no asylum, scarcely a landing place, to the crews of those frail boats, which are caught unwarily in the violent storms to which it is subject.

Chicago, small, but very important river entering Lake Michigan at its southern extremity. The country over which it flows, is a low flat prairie. Its mouth is obstructed by a bar, over which, vessels drawing more than 3 feet water cannot enter, though inside adequate depth is found for ships of almost any tonnage. The postage between Chicago and Riviereaux Plains, a branch of Ill., is only about 9 ms. At high water, vessels of considerable size already pass, and a canal is contemplated to unite Lake Michigan with Illinois.

Chihuahua, state of, one of the states of the republic of Mexico, bounded S. by Durango, W. by Sonora y Sinaloa, N. uncertain, and E. by Coahuila y Texas. Capital Chihuahua. N. lat. 28° and lon. 28° W. from W. C. intersect, according to Tanner's map of Mexico, about 75 ms. SW. from the city of Chihuahua. Extent and pop. uncertain. The features of Chihuahua are in great part similar to those of Durango, though the great Plateau or table land of Anahuac is here less elevated than farther to the S. A very great deficiency of water, is the most serious impediment, however, to the general pop. of this part of America, and is one of the many traits of resemblance between central N. America and central Asia. The seasons of what was the *Provincias Internas*, now the northern states of Mexico, have winters of excessive rigor, even more so than can be accounted for, either from lat. or elevation of surface. See arts. *Earth*, and *Mexico*.

Chilesburg, pstv. Caroline cty. Virg., 68 ms. S. from W. C.

Chili, large country of S. America, on the

coast of the Pacific Ocean, discovered by Diego d'Almagro, in 1525, extending from the desert of Atacamas, S. lat. $24^{\circ} 30'$, to Chiloe, S. lat. 44° . The mountainous part of it is possessed by the Puelches, Araucos, and other tribes of its original inhabitants, who are still formidable neighbours to the Spaniards. That part of Chili, therefore, which may be properly deemed Spanish, is a narrow district, extending along the coast, from the desert of Atacamas to the island of Chiloe, above 900 ms. Though bordering on the torrid zone, it never feels the extremity of heat, being screened on the E. by the Andes, and refreshed from the W. by cooling sea-breezes. The fertility of the soil corresponds with the benignity of the climate, and is wonderfully accommodated to European productions. The most valuable of these, corn, wine, and oil, abound in Chili, as if they had been native in the country. Here all the fruits imported from Europe attain to full maturity; and the animals not only multiply, but improve. The horned cattle are of larger size than those of Spain; and its horses excel in beauty and spirit, the famous Andalusian race, from which they sprung. Nature, too, has enriched Chili with valuable mines of gold, silver, copper, and lead. The population of Chili, has been for the last 2 centuries increasing, and at present, besides the independent tribes of natives, exceeds, it is probable, 1,500,000. Since 1818, this fine country has been virtually one of the civilized nations of the earth, and was by the government of the U. S. so recognised, in the Congress of 1821—22

C. $5^{\circ} 53'$ W. lat. $39^{\circ} 20'$ N. The site of the town is a plain, or river level, but the adjacent country rises into bold hills of from 200 to 300 feet, affording a fine diversity of surface. It was laid out in 1796, and in 1810 the tp. contained 1369, and in 1820, 2426 inhabitants. There are in this town 2 printing offices, 3 banks, and about 30 mercantile stores. Manufacturing establishments are numerous and flourishing, consisting of cotton spinning factories, oil, fulling, flour, and saw mills.

Chillicothe, land district, is composed of the 9 westernmost of the 22 ranges of tps. of the U. S. army lands. The refugee tracts, and the 7 westernmost of the 22 ranges of tps. of the U. S. lands S of the refugee tract. It includes

Chiltern, Eng. chain of chalky hills, running from E. to W. through Buckinghamshire, and forming the S. part of the county. They are covered in various parts with woods, and some of the eminences are of considerable height, and afford rich prospects. The air on these heights is extremely healthful; the soil, though stony, produces good crops of wheat and barley. This district belongs to the crown, which, for time immemorial, has had an officer under it, with the title of Steward of the Chiltern Hundreds.

Chimalpa, small river of Mexico in Oajaca, it flows S. into the Gulf of Tehuantepec.

Chimbo, *Chimbo*, mountain of S. America, in the chain of the Andes. Lat. $1^{\circ} 25' S$, about 100 SW. from Quito. The immense cone can be seen far into the Pacific Ocean, and presents to the eye of the mariner a most magnificent object. It rises according to Humboldt, to 21,446 feet. That illustrious traveller ascended its slope as high as 19,665 feet, the highest point on the globe ever ascended to by man. It is covered for several thousand feet by perpetual snow, and generally surrounded by fogs.

China, extensive country in Asia, between 29° and $12^{\circ} E$. lon., and 21° and $42^{\circ} N$. lat. It is bounded from N. to S., and 1050 from E. to W., bounded on the E. by the Yellow and China seas, S. by the latter sea and the kingdoms of Tonquin, Laos and Birmanah, W. by Tibet, and N. by Tartary, from which it is separated by a great wall. This stupendous wall exceeds every thing of human art and industry that is read of in history; and is said to have been built about the year 1160, to prevent the frequent incursions of the Monguls.

It extends along a hilly surface 1500 ms. in length; the breadth, in many parts, is upwards of 15 feet at the top; and it is flanked with towers at the distance of 300 feet: the materials of which the whole is composed are so close and solid, that is yet almost entire. China is divided into 15 provinces, which are Pe-tche-li, Kiang-nan, Kiang-si, Fo-kien, Tche-kiang, Hou-quang, Ho-nan, Chan-tong, Chan-si, Chen-si, Se-tchuen, Quang-tong, Quang-si, Yun-nan, and Koei-tcheou. These provinces contain 440 walled cities, divided into classes, the civil and the military; the civil class containing 2045, and the military 2357. The civil class is again divided into 3 other classes; the first are called *jog*, the second *icheou*, and the third *shuen*. According to the statement of the pop. of China, delivered to Lord Macartney, in 1793, by a Chinese mandarin, the number of inhabitants was not less than 333,600,000, but from the calculations in Nieuhoff's travels, the pop. is about 250,000,000. In Mr. Wain's remarks on the pop. of China, as published in the National Gazette, Philadelphia, we find the following:

On the subject of the pop. of China, Mr. Wain remarks:—"Admitting China Proper to contain 1,297,820 ms. or 840,719,360 English acres, and the pop. to amount to 150,000,000, every sqm. would contain but about 115 persons, and every individual might possess more than 51 acres of land. But every sqm. of Great Britain, contains more than 150 people. In the kingdom of the Netherlands, the enormous proportion of 200 souls to each sqm. subsists. France, Bavaria, Wurtemberg, Westphalia, Saxony, Austria, Italy, all possess a greater average pop. than China. Hindoostan, which comprises 1,029,000 sqms., containing 100,000,000 of inhabitants, is proportionally almost as populous as China, the number of persons to each sqm. being only 1-7th less than in that empire. We have, therefore no reason to admire the exuberant pop. of China, nor maintain an error which for many centuries has been proverbially extensive."—*Nat. Gaz.*

In my own Geographical Lectures, I have been at some pains to fix with some degree of probable accuracy the pop. of China. In the Chinese empire we must carefully distinguish between China Proper, and the immense subject provinces. The geography and history of the world affords no other object more sublimely great than this immense sovereignty, the most numerous and it is probable most anciently civilized nation. As a whole, the Chinese empire fronts on the Pacific Ocean from the head of the Gulf of Tung-Quin, to the mouth of the Amur 5,000 ms., upon Asiatic Russia, from the sea of Ochotsk, to the Irush river 3000 ms.; along the Altaian and Imaus mountains 1500 ms., and skirting the two Indias 2500 ms.; having an entire outline of more than 12,000 ms. Within this perimeter is included the one-thirteenth part of the land area of this planet; every variety of soil, and almost every diversity of climate. It includes the most elevated of all mountains, the Himalaya, the high, cold, and desolate plains of Thibet and Mongolia, and also the rich alluvial Deltas of the Amur, Hoanho, and Kianku.

Almost all European travellers who have

visited China, from Mark Paul to Sir George Staunton, have expressed their astonishment at the overwhelming pop. of the country. In the case of Sir George Staunton, no doubt public curiosity brought immense crowds to the roadside, to see so novel a spectacle as an English embassy pass, and contributed to excite wonder on one side and gratify it on the other. China Proper contains in round numbers about 1,300,000 sqms., and has now (1826) enjoyed an almost entire exemption from war for 180 years. If we compare this surface with the surface contained by the Spanish peninsula, France, and Great Britain, we may have, I am convinced, a tolerable safe approximation to a correct view of the pop. of the former. Spain, Portugal, France, and the British islands, contain collectively 535,000 sqms. with 64,000,000 of inhabitants, or a distributive pop. of 120 to the sqm. If China Proper is equally well peopled with western Europe, it contains 156,000,000. It would be, I am induced to believe, a fair inference from the general evidence of travellers, that the preceding estimate is not sufficiently favourable to China; but adopting the result, we may safely allow 200,000,000 of inhabitants to the whole empire.

In respect to climate there is a very remarkable resemblance between that of China and that of the U. S. Both occupy the SE. sections of large continents within very nearly the same parallels of lat. Each have a wide Ocean to the SE. and an extensive, elevated, and in great part naked expanse to the NW.; and each are drained by immense rivers, the courses of which are generally from the NW. to the SE., or from the SW. to the NE. The climate and soil are various, as the different provinces are nearer to, or remote from the S.; severe cold being felt at Peking, while the southern provinces are exposed to excessive heat. Here are several large lakes; the principal of them are the Po-yang, in Kiang-si, 250 ms. in circumference; the Tong-ting, in Hou-quang, above 200 ms. in circumference; the Tai, part of which extends into Kiang-nan, the Hong-tse, and the Kao-yeou, in the province of Kiang-nan. The chief rivers are the Kian-ku and the Hoan-ho, beside which there is an infinitude of great and small rivers, and fine canals, one of which, called the Grand Canal, surpasses any thing of the kind in the world. By this canal, and some rivers, there is a communication by water between Peking and Canton, the two extremes of the empire, except the interruption of a day's journey, by a mountain in the province of Kiang-si. This inland navigation, upwards of 1400 ms., is effected from Peking by passing down the Peiho to the influx of the Lu-ho, then up that river to the entrance of the grand canal, and along that canal to the Kian-ku; then up that river into the Poyang lake, and thence up the river that runs through Kiang-si; then over the mountain before mentioned, and down the river of Canton. The manufactures of China embrace almost every article of industry; but the most noted are porcelain, silk, cotton, and paper. The internal commerce of the country is immense, but the external trade is unimportant; the chief export is that of tea, which is sent to England. In several of the provinces,

the land yields two crops a year; yet, though the husbandman cultivates it with such care as not to lose the smallest portion of ground, the country has been often desolated by famine. One great cause of the scarcity of grain is the prodigious consumption occasioned by the composition of wines, and of a spirituous liquor called rack. The numerous mountains of China, (which are chiefly in the N. and W. parts) contain mines of iron, tin, silver, copper, quick-silver, gold, and silver; but those of gold and silver are little worked, that the people may attend to the more useful labours of agriculture. Quarries of marble, coal, lapis lazuli, jasper, rock crystals, granite, and a kind of sonorous stones, of which musical instruments are composed, are abundant; and here is potters' earth of such various and superior kinds, that the fine porcelain of China is unrivalled. Beside the fruits peculiar to the country, it produces the greater part of those of Europe; but (excepting the grapes and pomegranates) they are much inferior. Oranges were first brought us from China. Here are also lemons, citrons, the tse-tse, a kind of fig, peculiar to China; the li-tchi, of the size of a date, its stone covered with a soft juicy pulp, of an exquisite taste, but dangerous when eaten to excess, the long-yeu, or dragonseye, its pulp white, tart, and juicy, not so agreeable to the taste, but more wholesome than the li-tchi. The Chinese excel in the art of managing kitchen gardens, and have a number of vegetables unknown to us. They cultivate even the bottom of their waters; the beds of their lakes, ponds, rivulets, producing crops unknown to us, particularly of the pitsi, or water chestnut, the fruit of which (found in a cover formed by its root) is exceedingly wholesome, and of a very delicate taste. Among the trees peculiar to China is the tallow-tree, the fruit of which is white, of the size of a small walnut, and the pulp has the properties of tallow; the wax-tree, producing a kind of white wax, almost equal to that made by bees; the tsichu, or varnish-tree, which produces the admirable Chinese varnish; the tie-ly-mou, or iron wood, the wood of which is so hard and heavy that it sinks in water, and the anchors of the Chinese ships are made of it; the camphure-tree; the bamboo reeds, which grow to the height and size of a large tree, and beside being used as natural pipes to convey water, are employed for numberless other purposes, the tea-plant, &c. with cotton, betel, and tobacco; the flowering shrubs, flowers, herbs, and medicinal plants, are too numerous to be recited. In the mountains and forests are wild animals of every species; but that valuable quadruped, the muskdeer, is peculiar to this country. Of its birds, the most beautiful in China, and perhaps in the world, is the kin-hi, or golden fowl. The complexion of the Chinese is a sort of tawny, and they have large foreheads, small eyes, short noses, large ears, long beards, and black hair; and those are thought to be the most handsome who are the most bulky. The women affect a great deal of modesty, and are remarkable for their little feet. The men endeavour to make a pompous appearance when they go abroad; and yet their houses are mean and low, consisting only of

ground floor. Their towns are so much alike, that those who know one, are acquainted with all. Learning, with the arts and sciences in general, is much cultivated in this country. Their writing is very particular; for every letter is a word, and consequently they have as many letters, or characters, as words in their language. Their religion is paganism. They allow polygamy. Burials are not permitted in cities and towns, and their sepulchres are commonly on barren hills and mountains. They pretend to have a great veneration for their ancestors; and some keep images of them in their houses, to which they pay a sort of adoration. They have laws which regulate the civilities and ceremonious salutations they pay to each other, for which reason they always appear to be extremely good-natured; and yet they are as deceitful as any people in the world. The government is absolute, and the emperor has the privilege of naming his successor; but the chief mandarin has permission to tell him of his faults. He looks upon his subjects as his children, and professes to govern them with paternal affection. Their empire is very ancient, and they pretend that it existed many thousand years before Noah's flood, it is generally allowed to have commenced 2300 years before the birth of Christ. The Chinese empire now includes Thibet, the greatest part of Tartary, Corea, and numerous islands on the S. and E. coasts of China, the principal of which are Lieou-kiang, Formosa, and Hainan. The annual revenues of the crown, according to Sir George Staunton, are said to be 66,000,000*l.* sterling; and the army in the pay of China, including Tartars, amount to 1,000,000 infantry, and 500,000 cavalry. Peking is the capital.

Chin-India. This new term in physical Geography, has been introduced into that science by Malte Brun, with great propriety. That great projection of Asia, extending southward from Thibet and China, and between the bay of Bengal, and the Chinese sea, had never before the publication of Malte Brun's Geography received a definite distinctive name. Chin-India, is highly appropriate as respects pop. and position. Arracan, the Burman empire, and in a slight degree, Siam and Malacca, were influenced by Hindoo languages, religion and civilizations whilst the manners, language, and literature of China, are visible in Tonquin, Co-

chin China, Cambodia and Laos. See the different sections under their respective heads.

Chunar, fort of Hindoostan Proper, in the province of Allahabad. It is seated on the Ganges, 20 ms. above the Banares, and is built on a rock, which is fortified all round by a wall, and towers at various distances. At the end, overlooking the river, is situated the citadel, which has formerly been strong. This fort is said to be of the highest antiquity, and origin-

ally built by the Hindoos. In the citadel is an altar, consisting of a plain black marble slab, on which the tutelary deity of the place is traditionally supposed to be seated at all times, except from sunrise till 9 in the morning, when he is at Benares; during which time, from the superstition of the Hindoos, attacks may be made with a prospect of success. Chunar has always been considered as a post of great consequence on the Ganges, from its insulated situation, projecting forward to a great extent, and being of considerable height. Cincinnati, is a large commercial city, and seat of justice for Hamilton city. Ohio. It is situated on the N. bank of Ohio river, opposite Newport in Kent., and about 20 ms. from the mouth of the Great Miami river, at the SW. corner of the state. The town was laid off in January, 1789, adjacent to fort Washington; which had been erected during the autumn previous. It was settled by emigrants from N. J., and the N. England states; but did not extensively improve until after Gen. Wayne had defeated the hostile Indians in August, 1794. Since that period, however, it, together with the adjacent country, has rapidly progressed in pop., wealth and internal improvements.

Among the public buildings are two presbyterian, two methodist, one episcopalian, and one friends' meeting houses; beside an elegant and costly court house and jail, and two extensive market houses; one of which, called the lower market, is built with triple rows of pillars 300 feet long. The markets are held in them four days in a week, two days at each, alternately. Here are also several manufacturing establishments for cotton and woollen goods; for paper, and for silver, brass, copper and iron wares, and machinery of various descriptions. Here are also four printing offices, three of which print weekly newspapers; likewise four book stores, a type foundry, and a manufactory for making cards for carding machines. One of the machines in this establishment is a great specimen of human ingenuity. By the simple process merely, of a boy turning a small crank, the wire is drawn from a reel, cut off at a suitable length, bent into card teeth, the leather perforated, and the teeth set therein, all by the one process above mentioned.

In January, 1819, a Medical College was established here, by the Ohio legislature, and during the same month, the Cincinnati college was also chartered; both of which are now progressing, with a prospect of becoming useful.

institutions for the western country. The faculties of both colleges are, in some measure, united, and both occupy, conjointly, the public edifices designed for their accommodation.

Cincinnati was formerly, the seat of the old territorial government, until 1800; and in January, 1819, was incorporated as a city. Distance, S. by W. from Dayton 52 ms., 110 SW. from Columbus, 93 W. by S. from Chillicothe, and 82 N. by E. from Frankfort in Kent. Lat. $39^{\circ} 6' N.$ lon. W. C. $7^{\circ} 25' W.$

The following account of the local situation of Cincinnati; and enumeration, and description of the various public edifices, and improvements, are taken from Doctor Daniel Drake's valuable "Picture of Cincinnati and the Miami country," published in 1815.

"Its site is the eastern part of a tract of alluvial or bottom land, bounded on the N. by a chain of ridges, on the W. by Mill creek, on the S. by the river, and on the E. by Deer creek, a brook which originates in the neighbouring uplands. The area of all this plain is about 4 sqms. It is unequally elevated, and the upper and lower tables have received from the inhabitants, the names of Hill and Bottom. The latter (gradually widening) stretches westwardly, from the mouth of Deer creek, where it is but 200 feet broad, to the interval lands of Mill creek. Its medium breadth is about 800 feet. The NW. portions of this slip are the lowest. They have been overthrown a few times since the settlement of the town, and in March 1793, the whole of this plain was inundated. The Hill rises about 50 feet above the Bottom. The ascent, which is at first steep, soon becomes gradual, and continues for the distance of nearly 1000 feet when the surface declines gently to the base of the adjoining highlands—The medium breadth of this table is about one mile. Its western portions are uneven, and towards Mill creek descend to the level of the Bottom. On the opposite side of the river, the valley has nearly the same expansion. The ranges of hills bordering these extensive plains, intersect each other in such directions as to compose an imperfect square, through the NE. and SW. angles of which the Ohio enters and passes out. Being variously divided by streams and rivulets, lying at different distances from the town, and having a dense covering of tall trees, these ridges afford a pleasant termination to the view.

"Philadelphia seems to have been the model after which that portion of this town first laid out, was planned. Between Broadway and Western Row there are six streets, each 66 feet wide, running from the river N. $16^{\circ} W.$ and lying 396 feet asunder. These are intersected at right angles by others of the same width, and at the same distance from each other; except Water and Front street, and Second and Third street, the former of which are nearer, and the latter, on account of the brow of the Hill, more distant. Not a single alley, court, or diagonal street, and but one common was laid out. The blocks or squares were each divided into eight lots, 60 by 198 feet, except those lying between Second and Third street, which made ten lots each; and those between Front and water street. The out-lots, 81 in number, contain four acres each, and lie chiefly in the N. of the

town. This plan was not deposited in the public archives for record until the 29th of April, 1802. The streets in that part of the town laid out by John C. Symmes, are but 60 feet wide. Those intersecting the river ran N. $44^{\circ} W.$, and lie at the same distance from each other as the streets in the original town, but the cross streets are nearer, and hence the lots of this quarter are shorter. The plan of this survey was not recorded by the proprietor till the 12th of September, 1811. The reservation of the General Government was surveyed so as to connect the plats just described. The different subdivisions will be best understood by a reference to the engraved plan.

"The new Presbyterian church is a very spacious brick edifice, measuring 68 by 85 feet. Its eastern and narrower front looks towards Main street, and is cornered with square turret crowned with cupolas. From the rear is an octagonal projection, for a vestry. The foot is of a common form. The height from the ground to the eaves is only 40 feet, to the top of the cupola 80, which is less than either side including the towers, and hence the aspect of the building is low and heavy.—The stair cases are in the basements of the turrets, and are entered without passing into the house. The inside is divided into 112 pews, and five capacious aisles.

"The Episcopalian church, in Sixth street, is a handsome and commodious brick edifice, 40 by 55 feet, well furnished with doors and windows, ornamented with a balustrade, and finished inside with taste.

"The Cincinnati college on Walnut street in the rear of the Presbyterian church, is an extensive two story brick edifice, consisting of two oblong wings, extending from Walnut street 88 feet deep. Near the front, they are connected by an apartment, for stair cases, 18 by 30 feet, out of which arises a dome capped peristyle, designed for an observatory. The front of this intermediate apartment is to be decorated with a colonnade, forming a handsome portico, 12 feet deep and 30 feet long. The front and each side are ornamented with a pediment and Corinthian cornice. The aspect of the building is light and airy.

"The buildings of the Cincinnati Manufacturing Company, on the bank above Deer creek, are numerous and extensive. The main edifice is 150 feet long, from 20 to 37 feet wide, and from two to four stories high.

"The most capacious, elevated and permanent building in this place, is the Steam Mill erected in the years, 1812, '13 and '14 on the river beach, upon a bed of horizontal limestone rocks, and in high floods is for its whole length exposed to the current. The foundation is 62 by 87 feet, and about 10 feet thick. Its height is 110 feet, and the number of stories nine, including two above the eaves. To the height of 40 feet, the wall is battered or drawn in; above, it is perpendicular. The cornice is of brick, and the roof of wood, in the common style. It has 24 doors and 90 windows. The limestone with which it was built was quarried at various places in the bed of the river, and measures in the wall 6620 perches. Besides this, it swallowed up 90,000 bricks, 14,800 bushels of lime, and 81,200 cubic feet of timber

its weight is estimated at 15,655 tons. Through the building there is a wall dividing each story into two unequal apartments the one designed for manufacturing flour; the other for receiving wool and cotton machinery, a flax seed oil mill, fulling mill, and several other machines.

A river of the same name, which rises in the middle of the cty., runs along this vale, and having entered Flintshire, falls into the Irish Sea.

Clyde, river in Stld., which arises in Annandale, falls into the sea over against the Isle of Bute.

Clyde, river of Orleans cty. Ver., which falls into Lake Memphramagog, at its SE. corner.

Clyde, pstv. on the Great Western Canal, in Seneca cty. N. Y., 18 ms. NE. from Geneva, and 25 NW. from Auburn.

Clyde River, of N. Y., formed by the outlet of Canandaigua lake, and Mud creek. These two latter unite at Lyons in Wayne cty. The outlet of Canandaigua lake, issues from that

sheet of water at the village of Canandaigua, flows thence a little E. of N., 8 ms., into the tp. of Manchester, where it turns abruptly to the E., in which direction it continues 2 ms. to Phelps, having received from the southward the large accession of Flint creek. Below Phelps, the Canandaigua again turns to almost due N. 8 ms., to Lyons where it joins Mud creek.

Mud creek rises as far S. as the head of Canandaigua lake, having its source in the tp. of Naples; from which it flows 25 ms. nearly due N., through Ontario cty to Farmington. Here it turns NE. 10 ms., reaches Palmyra, where it winds to the E. and follows the latter course, by a very winding channel of 15 ms., unites with the Canandaigua at Lyons. These streams are of importance, as they contribute to supply the Erie canal. That great work follows the valleys of Mud creek and the Clyde, from about 2 ms. W. from Palmyra, to the junction of the Clyde, with Seneca river above Montezuma. The Clyde, from its head at Lyons, to its influx into the Seneca river, has a winding course of about 20 ms., with a fall of 21 feet.

Clefsdale, wild district of Stld. in the S. part of Lanerkshire. Amid the mountains here, particles of gold have sometimes been washed down by the rains and streams of water, but this tract is chiefly remarkable for producing metals of inferior worth. The veins of lead lie mostly N. and E., and their thickness, which seldom exceeds 40 feet, varies greatly in different parts. The scanty pasture here, feeds some sheep and cattle.

Coahuila y Texas, state, one of the states of the Republic of Mexico; bounded S. by New Leon, SW. by Durango, W. by Chihuahua, N. uncertain, and E. by the state of Tamaulipas. This state, the extent of which is uncertain, lies upon the eastern slope of the great Cordillera, or Plateau, upon which is situated, Durango, and Chihuahua. Rivers, and even spring water, rare in the two latter, becomes abundant in some parts of Coahuila. The immense volume of the Rio Grande del Norte, traverses this state, from NW. to SE. Though exactly E. from Chihuahua, the climate of Coahuila, is much more exposed to heat in summer, though the winters are alike severe in both places; and in both, rains are, when they do occur excessively heavy, and durable, falling in torrents; but droughts are as durable. Whilst I resided in Lou., I think it was 1800, 1801, and 1802, scarce a shower fell upon the regions near the mouth of the Rio Grande del Norte. That river, though upwards of 1400 ms. in length, almost ceased to flow, the smaller streams were dried, and the little water left in their great river was the only resource of the inhabitants, to save themselves and cattle from perishing. However, except some small tracts near the sea-coast, the whole of the northern states of Mexico, are in a peculiar manner salubrious. See *Mexico*. N. lat. 28° and lon. W. C. 24° W., intersect in Coahuila y Texas. Chief towns, Montelopez and Saltillo.

Colagna, town of Italy in the Paduan, 26 ms. SW. of Padua. Lon. $17^{\circ} 27' E.$ lat. $45^{\circ} 14' N.$

Cologne, electorate of Germany, in the circle of the Lower Rhine, bounded on the N. by the dutchy of Cleves and Guelderland, on the E. by the dutchy of Berg, on the S. by the archbishopric of Treves, and on the W. by the dutchy of Juliers. It is one of the most fertile countries in the empire, abounding with all the necessities of life.

Cologne, ancient city of Germany, capital of the electorate of Cologne, with a bishop's see, and a famous university, seated on the river Rhine, 17 ms. E. of Juliers. Lon. $7^{\circ} 10' E.$ lat. $50^{\circ} 55' N.$

Colombia, republic of S. America, composed of the former vice royalty of New Granada and the captain generalship of Venezuela, or Caracas. It is bounded by the Pacific Ocean from the mouth of Tumbez river, S. America, lat. $3^{\circ} 45' S.$, to Dulcebay, in N. America, lon. W. C. $5^{\circ} 10' W.$ lat. $8^{\circ} 50' N.$; thence crossing the Isthmus between Dulce and Cartago bays, including the provinces of Panama, and Veragua, on the Gulf of Nicaragua; thence along the Carribbean sea, and Atlantic Ocean, to Cape Nassau, between Spanish and Dutch Guyana, long. W. C. $18^{\circ} 20' E.$ lat. $8^{\circ} N.$; thence S. to Issequibo river, and up that stream to its source in the mountains, separating Colombia from the Portuguese territories: thence W. along those mountains, to the source of the Orinoco, where the boundary inclines to SW. and continues in that direction to the Rio Negro at Fort de Saint Jose. Here commences an artificial limit which, in a direction something W. of S., continues to St. Fernando at the mouth of the Rio Ica on the Amazon; thence up the latter, the Tunguragua and Lauricocha, to the foot of the Andes at Con. W. C. $1^{\circ} 30' W.$ lat. $6^{\circ} 20' S.$; thence crossing the Andes, and turning to NW. by N. between Jaen, and Piura, to the place of beginning at Tumbez.

This vast empire includes besides innumera-

ble smaller streams, the entire waters of the Orinoco and Magdalena, together with the northwestern confluent of the Amazon. In respect to climate, it embraces from Point Galinas, $10^{\circ} 20' N.$, to the banks of the Lauricocha, at the southern extension of Jaen, lat. $6^{\circ} S.$ It includes, independent of minor indentings, on the Pacific Ocean 1700 ms. of sea coast; 1700 ms. on the Carribbean sea; and 300 ms. on the Atlantic Ocean; giving an aggregate navigable ocean border of 3700 ms. The interior land frontier exceeds 2400 ms., the whole yielding an outline of 6100 ms. Within this wide perimeter, are enclosed all the varieties of soil from the frozen summits of Chimborazo, Cayambe Urcu, and Cotopaxi, to the almost illimitable plains of Cassinare, and the alluvial Delta of the Orinoco. The ocean limits present a front to the commerce of Asia, one to the U. S. and Mexico, and one to Europe and Africa. In the interior the highly navigable confluent of the Amazon and Orinoco render these extensive regions accessible at almost every point by water. It is obvious that in this greatly diversified expanse, every vegetable production of the earth can be matured with ease, and in abundance. The whole surface amounts to within a small fraction of 1,100,000 sqms. The following table is taken from an official statement in the Colombian Gazette, published at Bogota, and republished in the Aurora.

The seven latter provinces known under the general name of Quito, has not been distributed into departments or senatorial districts, nor had the two N. American provinces of Panama and Veragua. It is, however, supposed that the ensuing congress will comprise those nine provinces into three departments, which from the senatorial ratio of four senators to each department will raise that body to 50 members. From the apportionment of representation already adopted, the nine provinces will have five members, augmenting the lower house to ninety-five.

Colonna, town of Italy, in Campagna.

Colorado, river of Mexico, in the Provincias Internas, or rather unconquered country, NW. of Sonora, and New Mexico. This stream rises in the mountains which give also source to the confluent of Missouri, Columbia and Rio Grande del Norte, at N. lat. 41° and W. lon. from W. C. 35° . Its general course is SW. by S. receiving numerous and large branches from the E., joins the Rio Gila, N. lat. 33° , dilates into a very wide estuary, which has received the distinctive name of the Gulf of California. The regions watered by this great river are very defectively known. Its entire length if the gulfs included exceeds 1200 ms.

Colorado, river of Mexico, province of Texas, rises in the unexplored country between the Red and Rio Grande rivers, and falls into the Gulf of Mexico N. lat. 29° W. lon. W. C. 19° .

Colorado, river of S. America, rises in the Andes S. lat. 32° , and pursuing a SE. course falls into the Atlantic Ocean at lat. $40^{\circ} S$., after an entire length of 700 ms. by comparative courses.

Colony, town of Italy in the Parmusan, near the Po, 8 ms. from Parma. The duke of Parma had a pleasure house here, which was one of the most delightful in Italy, and the gardens were very fine. Lon. $10^{\circ} 22' E$. lat. $44^{\circ} 51' N$.

Colosse, psto. Oswego cty. N. Y., 156 ms. NW. from Albany.

Coloswar, large town of Transylvania, where the states meet. It is seated on the river Samos, 37 ms. NW. of Weissenburg, and 120 E. by S. of Vienna. Lon. $23^{\circ} 15' E$. lat. $46^{\circ} 53' N$.

Colouni, Cape of, ancient promontory of Sunium in Attica, being the SE. extremity of Greece, and indeed of continental Europe. Cape Sunium was visited by Mr. Hobhouse in 1813, who has given a pretty detailed account of the ruins of the temple of Minerva Sunias, from the still standing white marble columns from which the modern name of the cape is derived. The view from cape Colouni presents, on the W., the promontory Ketapheke, and very near to that head land the abrupt rocky island, now called Gaidaronesi, ancient Patroclus, and still farther, Archinda formerly Bel-

bina. The view to the N. is soon terminated by the pine covered marble peaks of Laurium. To the S. the view is unlimited except by the horizon; the islands of Macronesi, Zea, Therma, and Serpho; and in clear weather, Andros, Tine and other islands, enrich this fine perspective. Mr. Hobhouse rather hastily contradicts Pausanias, where the latter asserts, that the spear and statue of Minerva on the Acropolis at Athens could be seen from Sunium. It is probable, that much could be seen from the summit of the temple of Minerva when entire, that cannot be visible from the surface of the ground; and it is also probable, that the moderns too much restrict, what was meant by cape Sunium. As it is, this cape must afford one of the most splendid views in the world. Hobhouse closes his account of its sweep by observing, that beyond Macronesi is Zea, then Therma and next Serpho, all long low land lying in a line successively, so as to have the appearance of one large island stretching to the S. The high lands of Argolis, about the cape Scyleum, that form the other extremity of the Saronic gulf are also visible at a distance of two or three and twenty miles.

Coloune, a village of Greece on the island of the same name is situated on the deep bay mentioned in our notice of the island. It contains 700 houses, with perhaps 2500 inhabitants, composed of Greeks and Albanians, and with no Turks.

Colouri, the ancient Salamis is about 5 ms square, and indented by a deep bay from the W. It is separated from Attica by a narrow strait not more than 300 yards wide, and from Megaris by another still more narrow. The bay or gulf of Salamis so famous as being the scene, of perhaps the most important naval battle ever fought, extends between the island and the main about 10 ms. with a mean width of about 3 ms. The island is rocky and elevated but with a good soil; extent something about 20 sqms. Enjoying the effects of sea air, the harvest of Salamis, according to Strabo is finished before those of the main land are commenced. It contains two large villages, Colouri and Acupelaki. "The island seems uncultivated", says Hobhouse, "except in the narrow valleys between the hills, near Colouri, and Acupelaki, where wheat and barley are grown." There are some thin pine forests on the mountains. The slopes are supplied with springs of good water. The women of Salamis are of a fine shape and handsome face, superior to the Athenians of the same condition. They have the free ingenuous air, without any of the vulgarity of the peasant, and their whole manner is a happy mixture of the sprightliness of the Albanian, and the politeness of the Greek female.

Columbia, Oregon or River of the West. This is amongst the most singular streams in America. W. of the Chippewan mountains, a valley extends nearly parallel to the coast of the Pacific Ocean, along which another nameless chain extends to an unknown distance. The intervening valley is about 330 ms. wide and very hilly and broken where known. In this valley about N. lat. 54° rises the extreme northern source of Columbia, which flowing S. up-

wards of 400 ms., receives Clark's river from the NE. Below the mouth of Clark's river the Columbia assumes a SW. course 200 ms.; receives at N. lat. $46^{\circ} 10'$ Lewis's river, from the NE. Below the mouth of Lewis's river, the Columbia continues to flow S. as low as N. lat. 46° , where it turns abruptly, and assumes from that point to its mouth a general course nearly W. The Multnomah or great southern branch of Columbia joins that stream 288 ms. by water, below the mouth of Lewis's river. Thus, the Columbia is formed by four large branches, the Columbia proper, Clark's river, Lewis's river and Multnomah.

Of these branches, the first and last are very imperfectly known. The Columbia proper interlocks in the Chippewan mountains with the sources of the Unjiga, and Sashashawin rivers. When seen by McKinzie, it was a stream of considerable size, but from that point to the mouth of Clark's river, the intermediate tributaries of Columbia are unknown.

Clark's river rises by a great number of branches in the Chippewan range, interlocks with the sources of Missouri, and S. branch of Sashashawin rivers. The extreme southern source of Clark's river, is about N. lat. 43° , and W. lon. W. C. $34^{\circ} 50'$; it thence flows NW. by N. 500 ms. beyond N. lat. 49° gradually curves W. and SW., finally joins the Columbia after an entire comparative course of upwards of 900 ms.

Lewis's river rises at N. lat. 43° , interlocks with the sources of the Arkansas, Plate, and Yellowstone river, it thence flows W. 200 ms. and assumes a northern course of 20 ms., receives its northern branch, a large tributary stream of above 200 ms. in length. Below the mouth of the northern branch, Lewis's river curves gradually to the W. 200 ms., unites with the Columbia after an entire course of 600 ms.

The Multnomah, draws its waters from a *terra incognita*. The Spanish travellers from Mexico, ascending the Colorado, to its source, found to the N. of that river two streams flowing westward, to one of which they gave the name of Rio de Buenaventura, and to the other, and most northerly, that of Rio de San Clementini. From analogy with the other rivers, and the general configuration of that part of N. America, the San Clementini, is supposed to be the extreme SE. source of the Multnomah. If so, that river rises at N. lat. 41° , and W. lon. W. C. 34° , and has an entire comparative course of 700 ms. Its mouth according to Clark and Lewis is 500 yards in width, with all the common appearances of a very considerable length of course.

The great valley or basin of Columbia, is considerably elevated above the surface of the Pacific Ocean. Clark's, Lewis's and Columbia proper, are precipitated over a series of ledges, which enrich the scenery, but interrupt the navigation of those streams. Though not actually determined there is little doubt but that the Multnomah, is also precipitated from a table land, the level of the tides. It is probable that the tide flows higher in the Multnomah, than in the main stream, in which it is arrested about 50 ms. above the mouth of the Multnomah.

The Columbia is one of the largest rivers of America, compared to its length, which if estimated by the Columbia proper, would be upwards of 1000 ms., by Clark's river 1000 ms., by Lewis's river 900 ms., or Multnomah 800 ms. But if the length of the Columbia and Multnomah above their junction be added, the entire length of the whole stream, from source to source would be 1700 ms.

Below tide water the Columbia rolls on to its mouth with an immense volume of 4 or 5 ms. wide about 150 ms.

The Columbian basin is upwards of 900 ms. from S. to N., and 400 ms. mean width, or covering an area of 360,000 sqms. Of this expanse the U. S. possess by discovery and treaties from N. lat. 42° to 49° , or 486 ms. N. and S., where the basin is at least 450 ms. mean width: of course the U. S. claim near 220,000 sqms. watered by the Columbia, and its confluents.

Between Columbia and Colorado rivers, stretches a region of more than 700 ms. by 500 ms., or above 350,000 sqms., which is utterly unexplored. This is a wide field for future enterprise.

From the concurrent testimony of all travellers and voyagers, who have visited the W. coast of N. America, the climate is much more mild than in similar latitudes, in the W. basin, or Atlantic slope. This increased warmth on the western coast of America, is in perfect analogy with the phenomena of climate on the opposing continent. As far, therefore, as the seasons are concerned, our Columbian territory will be more habitable than will be the corresponding latitudes E. of the Chippewan mountains. As in Europe and Asia, the zones of vegetable life will be found to cut those of latitude obliquely in N. America.

Columbia, pst. Richland district, S. C. It is also the capital of the state on the left bank of the Congaree, immediately below the confluence of Broad and Saluda rivers. It is regularly laid out, upon ground considerably elevated above the neighbouring streams. Boats of large draught ascend this high, and a steam boat has recently been built, intended to ply between Columbia and Charleston. Besides the ordinary buildings, suitable to legislative and judicial proceedings, and for religious purposes, a college, under the title of "the S. C. College," was established in this town in 1801, under the direct patronage of the state. It has now a president, 4 professors, 2 tutors, and above 100 students, with an excellent library, exceeding 5,000 volumes. It is indeed one of the most flourishing institutions in the U. S.; S.W. from the Potomac.

Columbia, city of Geo., bounded by Savannah river or S. C. NE., Richmond SE., Warren SW., and Wilkes and Lincoln NW. It is about 24 ms square; area 576 sqms. Surface rather waving than lilly; some very productive soil, with much of a middling quality. Staples, grain, and cotton. Chief town, Applington. Pop. 1820, 12,093. Ctl. lat. 33° 34' N. lon. W. C. 5° 40' W.

Columbia, District of, seat of the U. S. general government. It is composed of a tract 10 ms. square, lying nearly in a NE, SW., and NW., and SE. direction, on both sides of the Potomac. It was formed out of part of Prince Georges and Montgomery cos. in Md., and part of Fairfax city, Virg., and was ceded by Md. and Virg. respectively to the U. S. in 1790, and in 1800 became the seat of the U. S. general government. It now contains, besides the city of Washington, properly so called, Alexandria, and Georgetown. See these places under their respective heads. It is under the immediate government of Congress, and for local purposes, subdivided into Washington City, city of Washington, Alexandria, and Georgetown. The surface of the District of Columbia is generally very pleasantly diversified by hill and dale. The soil in its natural state, rather sterile. The climate is esteemed very healthy. The lat. of the Capitol is 38° 52' 45" N. and within a very small fraction, 77° W. from the Royal Observatory, near London. The mean temperature about 55° Fahrenheit. Similar to Philadelphia, Wilmington, Baltimore, and Richmond. W. C. stands immediately below the primitive range and at the head of tide water. As the project of a canal from W. C. over the Appalachian chain into the Basin of the Miss. is an object of public attention, the following table of comparative heights is inserted under the present article.

In the U. S. a difference of relative level of 400 feet is equivalent to a degree of lat. in relative temperature. See art. U. S. From this constitution of our atmosphere, a canal from W. C. to Pittsburg, would virtually, as respects temperature, inflect to lat. 43° N. I have inserted this remark, from having found in almost all reviews of this important matter, an entire neglect of so necessary an element as relative height.

From its position, Columbia is necessarily the centre of a very extensive and increasing commerce. The first falls in the Potomac at Georgetown, has been passed by a navigable canal; and other canals have been formed at various places on the Potomac and Shenandoah rivers, which have opened to Columbia the rich interior of Virg., Md., and Penn. The quantity of flour and other domestic produce, brought down the Potomac annually, is very considerable. The principal shipping interest of this district centers at Alexandria, but extensive business is also done at Georgetown. The amount of exports in 1817, was nearly 1,800,000 dollars, and the shipping to about 21,750 tons. At the junction of the E. branch with the Potomac, the U. S. have a Navy Yard, to which vessels of the largest tonnage can ascend.

A college has been organised in Washington City, as have also a medical society, a botanical society, and the Columbian institute.

Connecticut River, this noble stream rises on the border of L. C. and flowing nearly S. separates N. H. from Ver. and thence crossing Mass. and Conn. enters Long Island Sound.

Connecticut, is amongst the most curious of the Atlantic rivers. Its extreme northern sources are in a hilly, though not mountainous country, at N. lat. $45^{\circ} 10'$, interlocking with the sources of the St. Francis, branch of the St. Lawrence, and with those of the Kennebec; and thence assuming a course of a little W. of S. down a valley between two ranges of mountains, as far as N. lat. $43^{\circ} 43'$. Thence crossing Mass. and Conn. in a direction nearly due S. to Middletown in the latter, where it turns to NE. and finally enters the sound at $41^{\circ} 16' N.$ lat. Its entire basin is about 280 ms. in length, with a mean width of 45, draining an area of 12,600 sqms.

Though the basin of Conn. is almost entirely on a primitive rock, and though passing one small ridge of mountains near Middletown, it is nevertheless navigable for vessels drawing 10 feet water to that place; above the mountain pass 36 ms., following the windings of the stream; and by vessels drawing $7\frac{1}{2}$ feet to Hartford, 15 ms. still higher. The latter place is at the head of ship navigation, but though considerably obstructed by falls, rapids, and shoals, the navigation of the river has been so much improved by locks, and short canals, as to admit boats of considerable tonnage to ascend to, and descend from the fifteen mile falls above Haverhill, upwards of 250 ms. following the stream from Long Island Sound. This is very considerably the deepest inland navigation in the U. S. east from the Hudson.

Connecticut, state of the U. S. has the following limits:

| | | |
|---------------|-----------|----------|
| On Long Sound | • • • • • | 95 miles |
| New York | • • • • • | 81 |
| Massachusetts | • • • • • | 85 |
| Rhode Island | • • • • • | 50 |

Area 4,750 sqms., 3,040,000 acres; extending

from N. lat. 41° to N. lat. 42° and lon. W. C. from 4° 18' to 5° 13' E.

The coast of this state is finely diversified by harbours, of which New Haven, New London, Bridgeport and Norwich, are the principal; the Connecticut river is navigable to sea vessels to Hartford, and the Thames to Norwich. The state is intersected in every direction by good roads, and the country is most delightfully diversified with hills, and dales, which, taken in the well calculated aspect of the interior and the beauties of the buildings, give to this happy valley of Conn. a most seductive appearance.

The manufacturing industry of this state, has been carried to a greater comparative extent than anywhere in the U. S. its manufactured and agricultural products, embrace a great variety of articles, such as iron, nails, glass, hats, fire arms, &c. &c. wool, butter, cheese, Indian corn, &c. &c.

The following statement appeared some months past in the Conn. Mirror, not as complete, but generally true of the manufacturing establishments of this state.

Cotton—There are more than 60 cotton manufacturing establishments containing 50,000 spindles, and 100,000 are capable if all were employed, of manufacturing 9,960,000 yards per annum of cotton printing, and other goods of like quality, or employing 10,000 persons exclusive of wages, or paying out annually, \$600,000 dollars for labour.

Wool—There are 36 woollen manufacturing establishments (exclusive of 100 clothier's shops) whose value at the present valuation, \$200,000—these are capable of producing goods of present value to the amount of \$400,000 per annum—will worth 100,000 pounds of wool per annum—will pay annually, \$200,000 for labour.

Iron—This article is not less important than cotton and wool. With suitable encouragement (beyond existing duties) from \$2,000,000 value might be annually made, a great proportion of its value would be paid out for the labour in manufacturing.

Glass, Pottery, and Paper—Paper has been made here, and new works are at E. Hartford only, it is estimated that the capital employed in these three branches amounts to \$500,000.

Confession being asked in the first instance by the enlightened people, the interests of education, and the progress in her colonial and state policy Yale College in New Haven is the chief of the literary institutions. The state has also produced some of the most famous scholars of the U. S. Several of our literary institutions exist in the state, the principal of which is the theological episcopal seminary at New Haven, Mason Academy in Colchester, and the Episcopal Academy in Cheshire, and the Dart and Dunn Academy at Hartford.

In 1790, Conn. contained 337,945, and in 1800, 251,003 inhabitants. The rapid advance in population can be seen by the following table.

Constantinople, one of the largest cities in Europe, and the capital of the Turkish empire. It is of a triangular form, and seated between the Black Sea and the Archipelago, on a neck of land that advances towards Asia, from which it is separated by a strait a mile in breadth. The Bosphorus washes its sides, and a part of the craft of Constantinople lies there on the N. E. It is an ancient city called Byzantium, but the name was changed to Constantinople, after the emperor Constantine the Great, who made it the seat of the Roman empire in the E. It was taken, in 1453, by the Turks, who have kept possession of it ever since. The great citadel, called the Seraglio, is on the seaside, surrounded by walls flanked with towers, and separated from the city by a canal. It stands on the site of ancient Byzantium, the E. point of the present city, and is 3 ms. in circumference, consisting of an assemblage of palaces and apartments placed by the side of the moat, with symmetry and without order. The principal entrance of this place is of marble, and is called Capi, that is the Port (or gate) & is frequented frequently to express the duty to the empire. The castle of seven towers is a state prison, and stands near the golden Horn, at the W. point of the city from the seraglio; and at the NW. point, without the walls, is the imperial palace of Aides, with a village of the same name. The number of houses in Constantinople is prodigious; but in general they are mean, and all of them constructed of wood, and the roofs covered with hollow tiles. The public edifices alone are built in masonry in every good manner. The streets are narrow, badly paved, and

dirty; and the people are infested with the plague almost every year. The inhabitants, who are said to amount to 520,000, consist of Turks, two thirds of the other half of Armenians, and a great number of Jews, who are a great number of ancient monuments still remaining; particularly the superb church of St. Sophia, built in the sixth century, and converted into a mosque, and which holds 10,000 persons conveniently. There are also two mosques of sultan Solymann, and the old saraglio, in which are kept the wives of the deceased sultans, and a great number of the bazzars, or bazaars, and large public buildings, covered with domes, and many streets, and contained many of the most famous slaves of both sexes, and many of the principal officers of the army here to be sold. There are also a great number of young persons brought from Hungary, Greece, Candia, Sicily, and Germany, and sold to the Turks, who grow up in their manner and religion. The great mosque, near the mosque of sultan Bajazet, is the place for the diversions, where the jugglers and dancers play a great variety of tricks, and the amusement of this city is by some said to be surpassed by Mr. Tournefort 25 ms. from the city, the suburbs, it may be 34 ms. in compass. The suburb called Pers, is charmingly situated, and is the place where the ambassadors of England, France, and Holland reside. The city is built in the form of a triangle, and as the ground rises gradually, there is a view of the whole town from the sea. The public buildings, such as the palaces, the mosques, bagnios and caravansaries, for the accommodation of strangers, are many of them very magnificent. Cordova, episcopal town of Spain, in Andalusia, remarkable for its antiquity and for having preserved its splendour and riches through so many ages, it is well known to the Romans by the name of *Corduba*. In 1759, Abdoulrahman, only heir of the Ottomans, fixed his royal residence at Cordova. It began those flourishing ages of Arabian industry and magnificence, which rendered the Moors of Spain superior to all their contemporaries in arts and arms, and made Cordova one of the most splendid cities of the world. When Europe was buried in ignorance and debased by brutality of manners, it became the centre of politeness, industry, and genius. Grand and expensive monuments of architecture were undertaken and completed by means of those Spanish monarchs, whose remains to this day can behold without being struck and amazed with a high idea of the genius of those monarchs, as well as the grandeur of the prince who carried them into execution. It is seated on the Guadalquivir, over which is a magnificent stone bridge. The circumference is large, but it is not peopled in proportion to its extent, for there are many orchards and gardens within the walls. The palaces, churches, and religious houses are superb, particularly the cathedral, which is very magnificent. It was a mosque when the Moors possessed the town; for which reason it still retains the name of Mezquita. The square, called the Plaza Mayor, is surrounded by fine houses under which are piazzas. The trade consists in wine, silk, and Cordova leather. The neighbourhood are a vast number of orange and lemon trees. The best horses in Spain come hence. Cordova is 77 ms. Cornus, now called *Cerantho*, or *Gorame*, a celebrated city in the Morea, with a Greek archbishop's see. It was one of the most important places in Greece, on account of its situation, on the isthmus into the Morea; its castle on the top of an almost inaccessible rock; its harbours on the Gulphs of Lepanto and Engia; its riches and its architects, sculptors and painters, who were the most skillful in Greece. It is now greatly decayed, for the houses are not contiguous, but intermixed with fields and gardens, which make it look like a village. The country about it abounds with corn, wine and oil, and from the castle is a fine prospect over the sea to the E. and W. and a fertile country N. and S. The inhabitants are chiefly Christians of the Greek church. It is 40 ms. NW. from Athens. Lon. $23^{\circ} 3' E.$ lat. $38^{\circ} 14' N.$

Corinth, *Acrocorinth*, in the Morea, a neck of land which joins the Morea to Livadia, and reaches from the Gulf of Lepanto to that of Engia. The narrowest part of it is 6 ms. over; and on a mount there, called *Onion*, were formerly celebrated the Isthmian games. Julius Cæsar, Caligula, and Nero, in vain attempted to cut a channel through the isthmus; they therefore built a wall across it, called *Hexamilium*, because it was 6 ms. in length. This was demolished by Antioch II., rebuilt by the Venetians, and levelled a second time by Mahomet II.

Cornwall, city, which forms the SW. extremity of Eng., bounded on the E. by Devonshire, on the S. by the English Channel, and on the NW. by St. George's Channel. This country is 80 ms. long, 40 broad, and 250 in circumference, containing 960,000 acres. Pop. in 1801, 188,269, in 1811, 216,687, and in 1821, 257,447. Its chief rivers are the Tamar, Tate, Cober, Loo, Camel, Fowe, Haile, Lemara, Kense and Aire. Its principal capes or head lands are the Land's End, the Lizard, Cape Cornwall, Deadman's Head, Rame Head, &c. and a cluster of islands, 145 in number, called the Scilly isles, supposed formerly to have belonged to the mainland, though now 30 ms. distant; abounding with antiquities particularly druidical. As Cornwall is surrounded by the sea on all sides except the E. the summers are less hot, and the winters less cold, than in other parts of Eng. and the spring and harvest are observed to be more backward. High and sudden winds are also more common in this than in other counties of Eng. The soil as it is shallow, is not very fruitful, especially in the centre or the hilly parts; the valleys are very pleasant and fertile, yielding great plenty both of corn and pasture. The Phenicians early visited these coasts, some think 400 or 450 years before Christ. It derives its chief importance from its minerals. The mines of tin are numerous and are in general, very rich in ore; these have rendered this country famous in all ages. There has been sometimes found a small quantity of gold and silver, but not worthy of notice. With the metalline ores are intermixed large quantities of mundic and arsenic. Many sorts of stones

are also found here, particularly moorstone which is used both in buildings and for millstones; when polished, it appears more beautiful than any of the marble kind, and makes the richest furniture, as tables, chimney pieces, &c. but being exceedingly hard, the polishing is expensive. The copper mines are also numerous, and rich in ore. In many cavernous parts of the rocks are found transparent crystals, called Cornish diamonds, they being very brilliant when well polished. This country was one of the places to which the ancient Britons retreated, whose language was retained even to this century, but it is now quite extinct. The King's eldest son is born duke of Cornwall, and derives a revenue not only from lands appertaining to the duchy, but from the mines of tin and copper; he has under him an officer, called lord warden of the Stannary Courts, whose jurisdiction extends over the mines and miners of Cornwall and Devonshire, and he appoints in his privy council, the sheriff of the former city. Launceston is the capital.

Cricklade, borough of Eng. in Wilts. It is almost surrounded by the Thames, and is 25 ms. W. by S. of Oxford, and 83 W. by N. of London. Lon. $1^{\circ} 50'$ W. lat. $51^{\circ} 38'$ N.

Crimca, or *Crim Tartary*, the ancient Taurica Chersonesus, a peninsula, in Asia; bounded on the S. and W. by the Black Sea, on the N. by the province of Catharinenslaf, with which it communicates by the isthmus of Perekop, and on the NE. and E. by the sea of Asoph, and the strait of Caffa. The mountains are well covered with woods fit for the purpose of ship-building, and contain plenty of wild beasts. The valleys consist of fine arable land; on the sides of the hills grow corn and vines in great abundance, and the earth is rich in mines. But the mountaineers are as careless and negligent as the inhabitants of the deserts, slighting all these advantages; and like their brethren of the lowlands, are sufficiently happy if they are in possession of a flocks of sheep and as much bread as serves them to eat. In 1783, the Russians took possession of the country with an army; the following year it was ceded to them by the Turks; and the peaceable possession of the whole was secured to them in 1791, by the cession of the fortress of Oczakow. The Crimea is divided into two parts, by mountains which run E. and W. The N. division is flat, poor, and fit for pasturage only. In the S. parts, the valleys are astonishingly productive, and the climate extremely mild, from the exclusion of those violent winds by which the N. division is frequently incommoded. Besides the ports of Kerth and Jenikale, the road of Caffa, and the harbour of Baluclava, there is, near Seabast-

pul, one of the finest harbours in the world. The Crimea now forms one of the two provinces of the government of Catharinenski, under the name of Taurida; in some late maps it is called Taurica. Aclanetschet was made the capital in 1785.

Crio, Cape, ancient Criumetopon promontory, N. point of the island of Crete.

Cris, *Big* and *Little*, two points on the N. shore of lake Superior, U. C., E. of Isle Grange, and surrounded by islands; between these points is a noted and safe harbour.

Cuba, island of the W. Indies, at the entrance of the Gulf of Mexico, 700 ms. in length, and about 60 in mean width, or 42,000 sqms. superficial area. On the E. side it begins at 20° 20' N. lat. touches the tropic of Cancer on the N., and extends from 74° to 85° 18' W. lon. from London, and from 3° E. to 8° W. from W. C. It lies 60 ms. W. of Hispaniola, 85 ms. N. from Jamaica, 80 ms. to the E. of Jucatan, and 100 to the S. from Cape Florida. It commands the entrance of the gulfs both of Mexico

and Florida, as also the windward passages. It was discovered by Columbus, in 1492. The Spaniards are entire masters of it, having extirpated the natives. The soil is varied, in part extremely productive. Extensive savannahs chequer the interior. A chain of not very elevated mountains ranges nearly the entire length of the island. This ridge is supposed to be rich in minerals. The produce is composed chiefly of coffee, sugar, ginger, cassia, wild cinnamon, and very good tobacco, called by the Spaniards Cigarras. The hills run through the middle of the island from E. to W. but near the coast the land is generally level, and many rivulets flow from the hills to the N. and S. The hundredth part of this island is not yet cleared. The true plantations are mostly confined to the beautiful plains of the Havannah, Matanzas, and near St. Jago.

The following statistical notices of the Island of Cuba are extracted from an article in the Southern Patriot, printed at Charleston, which the editor of that paper informs us is from the pen of a gentleman who has had access to the best sources of information.

Property and Products.—During the last 7 years the average crop has been 300,000 boxes of sugar of 400 lbs. each and 25,000,000 lbs. of coffee. When the census was taken in 1801, a note was made of the number of churches, houses, farms, &c. by which it appears that there were then 204 churches, 42,268 houses, 1762 farm houses, 623 sugar estates, 779 coffee plantations, 1601 tobacco do., 830 breeding farms, 1193 pastures, 354 bee hive farms, 17 cocoa plantations.

Commerce.—In 1803, the exports from the Havana, were estimated by Baron Humboldt, at 3,000,000 of dollars.

158,000 boxes of sugar which he considered worth \$40 per box; 50,000 arrobas of coffee, worth \$5 the arroba; 40,000 arrobas of wax, at \$18 the arroba. In 1821, the exports were—236,669 boxes of sugar; 792,509½ arrobas of coffee; 15,724½ do. wax; 26,664½ do. molasses; 4,646½ pipes of rum. Showing an increase in the exports of the island of 78,669 boxes of sugar; 742,509 arrobas of coffee, and a diminution of 24,376 arrobas of wax.

The number of vessels that entered the port of the Havana in 1821 was 1322, exclusive of 300 small coasters. Of these 385 were Spanish, 655 American, 128 English, 72 French, 25 Dutch, 15 Bremen, 13 Danish, 9 Hamburgers, 6 Portuguese, 5 Swedish, 4 Sardinians, 3 pirates, prizes, 1 Prussian, and 1 Hanoverian.

In 1822, there entered 1396 vessels, of which 385 were Spanish, 669 American, 118 English, 62 French, 18 Dutch, 12 Hamburgers, 7 Bremen, 6 Danish, 7 Portuguese, 4 Swedes, 2 pirates, prizes, 2 Sicilians, 1 Oldenburger, 1 Sardinian, and 1 Columbian, a prize.

Population.—In 1805, the Island of Cuba contained according to Baron de Humboldt, 432,000 inhabitants of which

167,000 were whites,
90,000 free coloured,
180,000 slaves.

432,000

From 1804 to 1817, there were imported

The slave population according to
the census of 1817, - - - 199,145

By the census taken in 1817 it appears that the
population then amounted to 625,099 inhabitants
of which, 259,260 were whites, 108,057 free
coloured persons, and 499,145 slaves.

The island is divided into two provinces, under
the present government, Havana and Cuba.

The province of Havana, lately erected into
a bishopric, comprehends Matanzas, Trinidad,
Santo Espirita, Remedios and Villa Clara. It contains
a pop. of 431,377 of which 197,678 are
whites, 58,506 free coloured persons, 126,213
slaves, 14,000 troops, and 25,000 transient.

The province of Cuba comprehends the districts
of Santiago de Cuba, Bayamo, Holguin,
Baracoa and Puerto Principe, and contains
a pop. of 193,702 inhabitants, of which 59,722 are
whites, 57,135 free coloured persons, 63,071
slaves, 4430 troops and 9286 transient persons.

The number of African slaves imported from
the year 1800 to 1821 amounts to 1,75,054.

The city of Havana by the census of 1817,
contained within the walls 140,618 inhabitants,
including transient persons. Of those 37,885
were whites, 9010 free coloured, 12,361 free
blacks, 2542 coloured slaves, 21,799 black
slaves—83,598 permanent population of the city
and suburbs. The annual consumption of the
same is estimated at - - - 4,489,000

According to the Baron Humboldt, in 1804,
the revenue of the whole island produced
\$2,300,000, and the deficit was made up by an
annual supply from Mexico of \$1,326,000.

The deaths in 1821 in the Havana, were 2340
whites, 2126 blacks and coloured persons—
total 4460. Births in the same year, 4326. The
excess of deaths to births, is owing to the number
of strangers and negroes imported who die
of the black vomit.

From the preceding elements, it is shown
that the pop. of this very important island,
increased from 1805 until 1817, from 432,000,
to 625,099. This decrement is very nearly at
the rate of $3\frac{1}{2}$ per cent.; and adopting this
ratio the pop. of Cuba was in

1818 - - - 646,875

1819 - - - 669,415

1820 - - - 692,840

1821 - - - 717,089

1822 - - - 740,700

1823 - - - 766,624

1824 - - - 793,400

1825 - - - 821,000

Similar to every large section of America, the
island of Cuba is only commencing to be peo-
pled. The aggregate given in the preceeding
table for 1825, only supposes about 20 to the
sqm. Cuba would amply support 200 to the
sqm. or, admit a pop. of 7 or 8 millions. Ja-
maica in 1812, had a collective pop. of 80 to
the sqm., and at this ratio, Cuba would have
2,800,000 inhabitants.

Though from climate and soil, the produc-
tions of Cuba may be considered as comprising
nearly all the tropical plants, yet it is probable
coffee will continue to be the principal vegeta-
ble staple. Influenced by the intrinsic value of
this island, and the paucity of general informa-
tion on the subject I have given a place to a
succinct account of coffee cultivation in Cuba.—
Nat. Intel. Nov. 13th, 1824.

The following account of the coffee planta-
tions in Cuba, forms a part of an article in the
Missionary Herald for September. It was fur-
nished for that work by a gentleman, who spent
some part of the last winter and spring on that
Island for the benefit of his health.

The coffee tree has only a single stem, which
rises perpendicularly, and it is well filled with
branches from within a foot of the ground up-
wards. In order that the fruit may be gathered
with facility, the tree is not suffered to grow
more than five feet and a half high. Its gene-
ral form is conical.

A coffee-field is laid out with great attention
to order and beauty. A piece of level ground
is chosen, which usually has a red soil, and is
generally free from stones. A square, or paral-
lelogram is then marked out, containing from
100 to 540 acres, to be enclosed in a hedge of
lime, pinion, or some other suitable material.
The lime hedge is very beautiful, being from
4 to 6 feet thick, and having its top, by frequent
trimming, a perfect level. The pinion is not
so beautiful, but it takes less room, requires
less attention, makes as good a fence, and is
more durable.

Having defined the boundaries of the estate,
the principal avenues through it are next laid
out; and they are generally 2, 3, or 4 rods
wide, straight, and intersecting each other at
right angles. In the finished estates, these are
usually ornamented and shaded on each side
by rows of the orange, citron, mango, almond,
avocado, palm trees, &c. At the termina-
tion of one of these, and situated perhaps on
elevated ground, is the house of the planter.
Smaller avenues are next made parallel with
the others. All these avenues are preserved
free from weeds, and are kept smooth and neat.

Thus the whole ground is thrown into
squares, which are to be filled with coffee plants.
These, having previously grown to the height of
one or two feet, from seeds sown under the
shade of some grove, are carefully transplanted,
and are arranged in rows parallel with the
avenues, and nearly 6 feet apart. A square
contains 10, 20, or 30,000 trees. By the third
year from this time, they begin to remunerate
the planter; and at the end of 6 or 7 years,
may be regarded as mature. When a tree dies,
a new one takes its place; but the original
plantation is expected to live 15 years. Among
the coffee, especially when it is new, the plan-

tain is suffered to grow, for the purpose of giving bread to the negroes. Here and there, also the orange and citron trees, lift their golden fruit above the surface; and far above the rest, the privileged palm, in every direction, waves its beautiful summit.

Such plantations are great, splendid gardens, and are justly regarded by the inhabitants as the glory of their island.

The plantations that are finished, contain from 100,000 to 400,000 trees in each, and are wrought by from 40 to 400 negroes; and in proportion to the gross income, the expense of conducting them is said to be considerably less than that of the sugar estates. Hence their number is more rapidly augmenting.

The trees generally blossom in February, and in the early part of May, and sometimes oftener; but the blossom, on which most dependence is placed, is the one in May. Then a vast level of surface, white as the drifted snow, is presented to the beholder; but varied, and enlivened by the taller trees just mentioned. The harvest commences in September, and ends in February or March. If within this time, the average of half a pound of coffee is gathered from each tree, the harvest is esteemed good.

When the berries acquire a dark red colour, they are considered ripe for gathering, and the negroes, properly equipped, are sent into the field. An industrious negro will gather 5 bushels in a day; and a bushel in the pulp, fresh from the tree, is expected to yield at least 10 pounds of good coffee. It is then spread upon extensive driers made of stone and mortar. This process requires nearly a month. The husk or shell is then separated from the seed, in a mill, which exactly resembles the mills in this country, where apples are ground in a circular trough, by a huge rolling stone—excepting that the roller for the coffee is wood, though of considerable weight. In a few cases, a machine of a very different construction is used; but it need not be described.

The pulp being removed, the whole is exposed to the action of a fan, and then of a sieve; after which the female slaves carefully pick out the defective kernels. From 12 to 15 hundred pounds may thus be cleaned in a day. In the opinion of the planters, the flavour of coffee is materially improved by age. That which is 4 or 5 years old is preferred. Cuban, large river, formed by the junction of many streams, that rise in the countries between the Black sea and the Caspian. It divides the Abkhas and Circassians from part of Georgia. The Cuban falls into the sea of Asoph by one mouth, and into the Black sea by

another. The island of Jenicale lies between those outlets, and forms the eastern side of the straits of Caffa. The straits themselves have been evidently formed by the alluvion of the Cuban. This river has a comparative course of about 300 ms.

Damariscotta, river of Maine, or rather a long deep bay, extending from the Atlantic Ocean into Lincoln city, between Boothbay and Bristol.

Damascus, the Dimeshk, or Babel-sham of the Orientals, city and capital of the Pachie of Syria, in the Ottoman empire. It stands on the small river Baida, 200 ms. S. from Antioch, and 150 ms. SSE from Jerusalem. Lat. $33^{\circ} 35'$ N. lon. $36^{\circ} 30'$ E. This is amongst the most ancient cities of the earth, which yet maintains its prosperity, opulence and pop. Composed of a mixture of many nations, Damascus contains at least 100,000 inhabitants, and is the great entrepot, between the Mediterranean and southern Asia. It is the Tyre of modern times, and is enlivened by all the bustle of commerce, and by a peculiar tortoise and surrounding despotism, enjoying all the substantial advantages of freedom. The beauty and salubrity of its environs have been the admiration of travellers for three thousand years. The art of forming sabres of steel of unequalled elasticity and keenness of edge is lost, but in the manufacture of soap, cabinet work, stuffs, &c. the Damascenes equal the best workmen of Europe. The climate is almost an unending spring and summer, admired. Eastern authors call Damascus, one of the four terrestrial paradises.

The form of this city is nearly a square of $1\frac{1}{2}$ ms., with an extensive suburb. The ancient walls, have been neglected and are in ruins. Perhaps no other city in the world is so completely supplied with excellent fresh water. The Baida, or Batady flowing from the mountains of Syria, afford a superabundance of that most delicious fluid, and the whole city abounds in gushing fountains.

Damascus, Pachalic of Turkey in Asia, of which the city of Damascus is the capital. It contains nearly all northern Syria, extending to Caramania on the N. and to Palestine S. It is bounded on the W. by the Mediterranean and on the E. by deserts of sands. Like most countries on the borders of the Asiatic deserts, the Pachlic of Damascus exhibits tracts of exuberant fertility. The banks of the Orontes, the plains of the Hauron, the valley of Damascus or Gatha, and some other spots are in a high degree productive in vines, olives, and many other vegetable substances.

Damietta, ancient and rich town of Egypt, seated at one of the eastern mouths of the Nile, with a good harbour. It is rounded in a semicircle, two leagues and a half from the mouth of the Nile. The tongue of land on which Damietta is situated, straitened on one side by the river, and on the other by the W. extremity of lake Maryut, is only from two to six ms. wide from E. to W. It is intersected by innumerable rivulets in every direction, which render it the most fertile spot in Egypt. It is there that nature lavishing profusely her pomp and riches, presents flowers, fruits and harvests at every season of the year. Damietta was taken by the French in their expedition to Egypt, 1799.

Dan, river of N. C., which rising in the state of Virg., runs in a serpentine course near the line which divides the two states. Near Mecklenburg it falls into the river Roanoke, and loses its name in that of the greater stream. The falls at Danville near the line between Virg. and N. C., impedes the navigation; but measures have been taken to form a canal around this obstruction, which if completed, will render the Dan navigable to its junction with the river.

• *Dantzic*, capital of Western Prussia, standing on a branch of the Vistula, about 4 ms. above where it falls into the Baltic; in lon. $16^{\circ} 56' E$. lat. $54^{\circ} 29' N$. This city is famous in history on many accounts, particularly that of its being formerly at the head of the Hanseatic association, commonly called the Hanse towns. It is large, beautiful, populous, and rich; its houses generally are 5 stories high; and many of its streets are planted with chestnut trees. The houses are well built of stone or brick, 6 or 7 stories high, and the granaries are still higher, to which the ships lie close, and take in their lading. The established religion is the Lutheran; but Roman Catholics, Calvinists and Anabaptists are tolerated. The inhabitants have been computed at 200,000, but other computations have made them considerably less. In 1740, upwards of 50,000 died of the plague. It has now lost its independence, being forced to submit to the king of Prussia, who forcibly usurped the sovereignty, in a second partition of the Polish dominions. Besides corn, of which great quantities are exported, they trade in naval stores, and a great variety of other articles. It is seated on the Vistula, near the Gulf of Angil, in the Baltic, 30 ms. SE. of Marienburg, and 160 NW. of Warsaw.

Danube, one of the largest rivers in Europe, called the Ister by the ancients. It rises at Doneschingen, in Suabia, and flows NE. by Ulm; then E. through Bavaria and Austria, by Ratisbon, Passau, Ens, and Vienna; it then enters Hungary, and runs SE. by Presburg, Buda, and Belgrade, after which it divides Bulgaria from Morlachia and Moldavia, discharging itself by several channels into the Black Sea. It begins to be navigable for boats at Ulm, and receives several large rivers as it passes along. It is so deep between Buda and Belgrade, that the Turks and Germans have had men of war upon it; yet it is not navigable to the Black Sea on account of the cataracts.

The entire length of the Danube is about 1200 ms. It is remarkable for containing 3 basins; that of Suabia and Bavaria near its source, and that of Austria and Hungary in the middle, and that of Bulgaria and Valachia near the

Black Sea. The basin of this fine river extends in a direction from NNW. 1000 ms., with a mean width of 200; and contains 200,000 sqms., or, about the one-fifteenth part of all Europe; but as a productive tract, from the general fertility which prevails in all its minor basins, but particularly the middle, the Danube sustains a pop. which far exceeds the comparative rank of its basin. From the arbitrary division of provinces, it is difficult to fix the number of inhabitants existing upon this region, but the mass must be immense, as it is composed of the far greater part of the inhabitants of Wurttemberg and Bavaria; at least five sevenths of all the empire of Austria; with Croatia, Bosnia, Servia, Bulgaria, Valachia, and Moldavia; and cannot fall short of 33,000,000. If we estimate the entire pop. of Europe at 200,000,000, the valley of the Danube must sustain one-sixth of the whole mass. Lying between the parallels of 42° and $50^{\circ} N$. the climate is mild, and except some parts of Hungary, and near its mouth, the air of the Danube basin is healthy. Its most southern point is the sources of the Morava, in Servia, and the most northern, those of the March, which it receives between Vienna and Presburg.

As a navigable basin, however, the Danube basin falls far below either that of the Volga or the Dnieper. The former, is traversed by 2 chains of mountains; 1 extending N. from the chain of Tyrol; and the second, branching in a similar direction from the Helms, crosses the Danube at Orsova, and continuing N., unites with, and forms a continuation of the mountains of Transylvania. Though navigable therefore in each minor basin, this noble stream cannot yet be passed from source to mouth.

The mouth of the Danube has never yet been possessed by a really civilized people: the Turks only make ruin; and neither Austria nor Bavaria have availed themselves of the full advantages of their share of one of the greatest streams of the earth. See *Tasso* or *Therese*.

Dardanelles, two castles of Turkey, on each side the ancient Hellespont, now the strait of Gallipoli, the SW. entrance of which they command; the one is called Sestos, seated in Romania; the other Abydos, in Natolia. At the latter, the cargoes of all ships sailing from Constantinople are searched. Lon. $26^{\circ} 30'$ E. lat. $46^{\circ} 5'$ N.

Dardanelles, straits of, and those of Gallipoli, are different, though often confounded. About 12 ms. from the open Archipelago, within the Hellespont, the strait turns to nearly NW. and SE. and contracts to less than an English mile. Here the Sultan Bajazet I. built two castles, one on each side, called the Dardanelles, from which the whole strait is often vaguely named. Above the Dardanelles the strait turns to NE. and SW., and widens considerably, but again 22 ms. higher, and immediately below where the Marmara sea opens, and on the European side, stood the ancient town of Gallipolis, now Gallipoli; here the strait is again contracted to less than a mile, and is the proper Gallipoli.

Dartmouth College. This institution is located in the town of Hanover, Grafton city. N. H. It was founded in 1769, by the Revd. Dr. Eleazer Wheelock, and named in honour of William, earl of Dartmouth, one of its most munificent benefactors. In 1797, a Medical Institution was annexed to the college. The officers of this college, are, a president, 4 professors, 21 lecturers, and 3 tutors. The number of students, ordinarily about 150, and from 50 to 60 medical students. The college library exceeds 4000 volumes; and two other libraries with about 2000 volumes, each have been formed by associations of students. The medical department possesses a laboratory, anatomical museum, 2 lecture rooms and chapel. The college

has attached to its other establishments, an extensive and valuable philosophical and chemical apparatus. The site of Dartmouth college is pleasant and healthful, which, with the judicious arrangement of concerns, have rendered it a very flourishing institution. Its funds are chiefly drawn from lands, amounting to about 1600 dollars, annually. This revenue, added to the sums paid by students, yields a neat yearly amount of about 4000 dollars.

Dauphin, river of British N. America, flowing into Little Winnipic lake. Lon. W. C. 25° W. lat. 50° 20' N.

Dauphin, cty. Penn., on the E. side of Susquehanna river; bounded by Lancaster and Lebanon SE., by Susquehanna river W., Northumberland N., and Schuylkill NE.; length 35, mean width 16 ms.; area 528 sqms. This cty. is extremely diversified in surface. The SE. part of the cty. is hilly and broken, but with a soil highly productive. The Swatara rises in Schuylkill, and traverses Lebanon into Dauphin, passing over the southeastern section of the latter into the Susquehanna river. This part of the cty. lies below the Kittatinny range of mountains, and covering about 230 sqms., is subdivided into nearly equal portions by the limestone and slate regions. See *Kittatinny Valley*. Above the Kittatinny mountain, the residue of the cty. is excessively broken by mountains and hills, with a generally sterile soil. The staples of Dauphin are, grain, flour, whiskey, salted provisions, and live stock. Chief town, Harrisburg. Pop. 1820, 21,603. Clt. lat. 40° 25' N. lon. 76° 15' E. of W. C.

Dauphin, island of Al., off the mouth of Mobile bay. It is a sandy flat, covered with a few trees, about 6 ms. long, and from 2 ms. to a quarter of a mile wide. The Pass au Heron into Mobile bay, enters from Pascagoula Sound, N. from Dauphin island; the main Pass enters between the island and Mobile Point.

Dauphiny, late province of France, extending 40 leagues from N. to S. and 36 from E. to W.; bounded on the W. by the Rhone, N. by the Rhone and Savoy, S. by Provence, and E. by the Alps. Hence the heir apparent of the kings of France, is called the Dauphin. Two-thirds of Dauphiny are intersected by mountains, which afford good pasturage; plenty of timber, fir-trees in particular, for the building of ships; and very scarce simples. In these mountains, which are branches of the Alps, are bears, chamois, marmots, eagles, hawks, &c. and mines of iron, copper, and lead. The valleys afford wheat, and the hills, in the vicinity of the Rhone, excellent wines, olives, and silk. The principal rivers are the Rhone, Durance, Isere, and Drome. It now forms the departments of Drome, Isere, and Upper Alps.

Dac, or *Acqs*, ancient town of France, in the department of Landes, and late province of Gascony, with a bishop's see, and some famous hot baths. It is seated on the Adour, 24 ms. NE. of Bayonne. Lon. 1° W. lat. 43° 42' N.

Delaware, river of the U. S. The Delaware basin, intervening between that of Susquehanna and that of the Hudson, extends about 240 ms. from N. to S., with a mean width of 60 ms., extending over an area of 15,600 sqms. The

Delaware rises by two branches in the Catsbergs, draining the angle between the Susquehanna and Schoharie branch of Mohawk. The sources of the Delaware flow SW. by comparative courses, 50 ms., through Del. city, N. Y., unite at the NE. angle of Penn., and turn at right angles to a course of SE., following the latter direction, by comparative courses, 70 ms., to the NW. angle of N. J., and the base of the Kittatinny mountain; again turning with the mountain to the SW., follows that course, along its base, by comparative courses, 40 ms., to the mouth of Broadhead creek, where the river again turns, and passes the Kittatinny mountain. The general physiognomy of the Susquehanna and Delaware, every where remarkable, is in no other place so striking as in the valley between the Kittatinny mountain and the continuation of the Blue Ridge, below Easton and the mouth of the Lehigh. This river has a very crooked course above and even below the Blue Mountains; the country is very mountainous through which it passes, until it leaves the Watergap. It continues hilly along its banks, below the mountain as far down as Wells falls below the village of New Hope, in Bucks city. It has many rapids and shallows along its whole length, until it reaches Trenton falls, where it meets the tide. Boat navigation is very difficult above Easton. From Easton to the tide, the navigation has been improved, and at present, a very considerable trade is carried on in this part of the river.

In the Kittatinny valley, 23 ms., by comparative courses, below the Delaware Watergap, the Lehigh comes in from the NW.

The latter stream claims a very large share of attention, as being one of the great channels from which the city of Philadelphia, and indeed the whole Atlantic coast, is destined to receive exhaustless supplies of coal.

This branch of the Delaware rises in Wayne, Luzerne, and Northampton, and is, emphatically, a mountain stream. Flowing first to SW., curves to S and SE., pierces the Kittatinny mountain, crosses the Kittatinny valley in a SE. direction, is turned by the SE. mountain at Allentown, where it winds to the NE., and joins the Delaware at the borough of Easton, after a comparative course of about 80 ms. See *Lehigh*. Below the SE. mountain, the Delaware turns to a SE. course 35 ms., to where it leaves the primitive, and falls into the alluvial formation at the head of tide water. Continuing over the alluvion 4 or 5 ms., the Delaware again turns to SW., nearly parallel to, and about 5 ms. distant from, the primitive ledge, in which direction it flows by comparative courses, 35 ms., to the mouth of the Schuylkill.

Respecting the Schuylkill, it is sufficient to observe, that, it has its principal sources in Northampton and Schuylkill counties: that its general course is from NW. to SE., by comparative courses, 120 ms. Few secondary rivers of the American continent are destined to become of equal importance with the Schuylkill as a channel of inland navigation. The general course of SW. is maintained by the Delaware, about 30 ms. below the mouth of the Schuylkill, or about 5 ms. below New Castle. Here the river, already considerably expanded in width,

opens into a wide triangular bay, 65 ms. in length, and 30 wide, between Capes Henlopen and May. See *Schuylkill*.

Delaware Bay, the estuary of the De's are river, between N. J. and Penn., and between N. J. and Del. This bay in strictness commences at Trenton, at the head of tide water, but is usually computed from Fishers Point below New Castle to Capes May and Henlopen. Thus restricted it is about 65 ms. long, and varying in width from 3 to 30 ms. It admits the entrance of the largest vessels though much impeded by shoals.

Delaware, one of the U. States. This state is bounded by an exterior limit, from its

| | |
|--|--------|
| SE. angle at Fenwick's island to Cape Henlopen | 20 ms. |
| Along the right shore of Delaware bay | 90 |
| Around the semicircle of 12 ms. radius from New Castle | 25 |
| Thence nearly S. along Md. | 87 |
| Thence due E. to Fenwick's Island | 36 |

Having an entire outline of 258 ms. Area, 3120 sqms., equal to 1,356,800 acres.

Extreme length from S. to N. 96 ms.; greatest breadth along its S. boundary 36 ms.

Extending from lat. 38° 29' to 39° 54' N.

The state of Del. from its confined extent and position, presents the most uniform surface of any of the great political sections of the U. States. That part of Delaware bordering on Penn. rises into hills of some little elevation, and is extremely well watered. Receding, however, down Delaware bay, or rather along the intervening peninsula between that and Chesapeake Bay the face of the country becomes more monotonous, and finally sinks to a general level. Some parts of the lower sections of the state are marshy, some sandy, but interspersed with productive tracts. The respective fertility of the different divisions of the state can be seen by reference to the different cities, with their comparative pop.

In the northern part of the state the soil is well adapted to the production of grain and pasturage. Grain and flour are therefore staple commodities. For the manufacture of the latter article few places in any country can possess greater natural facilities, than does higher Del. Brandywine creek rising on the primitive and secondary formations in Penn. is precipitated over considerable rapids in its passage from the primitive rock to the alluvial tract below. Red Clay and White Clay creeks, branches of Christiana river present similar features to Brandywine, and taken together, afford an uncommon assemblage of seats for mills and other manufactories. Much has been done to improve those natural advantages. Manufactories of paper, gunpowder, and cotton and woollen goods have been extensively established. A canal to unite the Delaware and Chesapeake bays, and to cross the state of Del., was undertaken in May 1804. This enterprise, after considerable labour and funds had been expended, was from various causes suspended, in 1805; but now, (1822) is again revived, with the most flattering hopes of success.

For political and legal purposes Del. is sub-

divided into the following cities; having the pop. respectively annexed in 1820.

In the convention held at Philadelphia in 1787, the inhabitants were computed at 37,000. According to the census of 1790, they amounted to 50,000; in 1800, they had risen to 64,273.

Delaware, city. N. Y.; bounded by Penn. SW., Broome W., Otsego N., Schoharie and Greene NE., and Ulster and Sullivan SE.; length 45 ms., mean width 36; area 1620 sqms. Surface hilly in general, and in part mountainous. Soil nevertheless fertile, and productive in grain, fruits and meadow grasses. Chief town, Delhi. Pop. 1820, 26,387. Ctl. lat. 42° 18' lon. W. C. 2° E.

Delaware, city. Penn., on the Delaware river; bounded by Delaware river SE., state of Del. SW., Chester NW., Montgomery and Philadelphia cities. NE.; length .0 ms., mean width 10; area 200 sqms. Surface generally hilly, with a soil naturally productive, and much improved in many places by artificial means. The staples of this city consist of grain, flour, fruit, and an indefinite number of articles for the Philadelphia market. Chief town, Chester. Pop. 1820, 14,810. Ctl. lat. 39° 55', lon. W. C. 1° 33'. According to an estimate made by several intelligent persons of this city, in 1822, of the various water manufactories it then contained, including grist mills, saw mills, cotton factories, &c., they amounted to 144.

Delaware City.—We learn that a new city has recently been handsomely laid out at the mouth of the Chesapeake and Delaware Canal, which is called "*Delaware City*." A Post Office is about to be established there—it is within 6 ms. of New Castle, 11 from Wilmington, about 2 from Port Penn, and opposite Fort Delaware. The streets run at right angles, and many of the lots have met a ready sale at Philadelphia. It is thought that it will soon become an important commercial depot, and some establishments are already in operation and others are in contemplation.—*Balt. Pat.*

Delft, city of the kingdom of the Netherlands, in Holland. It is clean and well built, with canals in the streets, planted on each side with trees. It is about 2 ms. in circumference, and has a fine arsenal well furnished. It is noted for a considerable manufacture of earthen ware. It is seated on the Schie, 8 ms. NW. of Rotterdam, and 30 ms. SW. of Amsttdam. Lon. 4° 24' E. lat. 52° 4' N.

Delfshaven, fortified town of Holland, on the N. side of the Mease, with a canal to Delft, &c. It is between Rotterdam and Schiedam, not 3 ms. from each.

Delft, fortress of the kingdom of the Netherlands on the river Damster, 13 ms. NE. of Groningen.

Delha, province of Hindoostan Proper; bounded on the NW. by Lahore, on the NE. by Serinagur, on the E. by the Rohilla country, on the S. by Agra, and on the W. by Moulton. Having been the seat of continual wars for above 50 years, it is almost depopulated; and a tract of country that possess every advantage that can be desired from nature, contains the most miserable of inhabitants. It is now all that remains to the Great Mogul of his once extensive empire.

Delhi, capital of a province of the same name, in Hindoostan Proper, seated on the river Jumna. It is the nominal capital of all Hindoostan, and was the actual capital during the greatest part of the time since the Mahometan conquest. In 1738, when Nadir Shah invaded Hindoostan, he entered Delhi; and dreadful were the massacres and famine that followed; 100,000 of the inhabitants perished by the sword; and plunder, to the amount of 62,000,000l. sterling, was said to be collected. The same calamities they endured on the subsequent invasions of Abdalla, king of Candahar. Delhi is 80 ms. NNE. of Bombay. Lon. 77° 40' E. 28° 37' N.

Delichu, river of Albania, the Acheron of the ancient poets, who feigned it to be in hell.

Delmenhorst, town of Westphalia, in the city of Delmenhorst, belonging to Denmark. It is seated on the Delm, near the Weser, 8 ms. SW. of Bremen.

Delos, island of the Archipelago, now called *Diu*. There are abundance of fine ruins supposed to be of the temples of Diana and Apollo, whose birth-place it is said to be. It is 6 ms. in circumference, but now destitute of inhabitants. Lon. 25° 59' E. lat. 37° 30' N.

Delphi, or *Delphos*, town of Livadia, seated in a valley, near mount Parnassus. It was famous for the oracle of Apollo, which people came from all parts to consult.

Delphi, ptv. Onondago city. N. Y.

Delaperg, town of Switzerland, in the bishopric of Basle, 10 ms. NW. of Soleure. Lon. 7° 23' E. lat. 47° 17' N.

Delta, part of Lower Egypt, between the branches of the Nile and the Mediterranean. The ancients called it the isle of Delta, because it is in the shape of a triangle, like the Greek letter of that name. It is 130 ms. along the coast from

Damietta to Alexandria, and 70 on the sides from the place where the Nile begins to divide itself. It is the most plentiful country of all Egypt; and it rains more here than in other parts; but its fertility is chiefly owing to the inundations of the Nile. The principal towns on the coast are Damietta, Rosetta, and Alexandria. It is from the estuary of the Nile having been designated by the Greek Delta, that the regions near the mouths of all large alluvial rivers are now so named, though of very different outlines.

Delvinaki, village of European Turkey, in Albania, 30 ms. NW. from Joannin, inhabited by perhaps 2000 Greeks, who are chiefly employed in Agriculture. It is a place of some trade, being situated on the main route from Butrinto to Joannin, distant from the former place in a nearly NE. direction, 50 ms.

Delvino, town of European Turkey, in Albania, 20 ms. inland, and eastward from Butrinto, and about 30 ms. SW. from Delvinaki. These two towns have been often confounded, but are very distinct, the former being much the most considerable place, containing 8000 inhabitants. Says Hobhouse, from Butrinto it is 7 hours (21 ms.) in an eastern direction to Delvino, a town of 8000 inhabitants, and the seat of a Pasha of two tails, now, (1809,) subdued by Ali. From Delvino it is 3 hours NE. to the village of Navitza, and thence 7 hours more and in the same direction, to Delvinaki.

Dender, river which rises in the bishopric of Liege, waters Hasselt, Diest, Sichem, Arschot, and Mechlin, below which it joins the Senne, and takes the name of Rupel.

Demerara, river of S. America, in Guiana, rises at about lat. 4° N., and flowing nearly N. 200 ms., falls into the Atlantic ocean, 10 ms. E. from the mouth of the Isiquibo river.

Demerara, province of Guiana, lying on both sides of the Demerara river. It was ceded to Great Britain, by the king of the Netherlands, in 1814.

Demerary, settlement in Guiana, on a river of the same name, 3 leagues W. of Paramaribo.

Denuin, village of France, in the department of the North and late province of Hainault. It is seated on the Scheldt, 8 ms. W. of Valenciennes.

Denbigh, cty.-town of Denbighshire, situate on the side of a rocky hill, on a branch of the river Clwyde, 27 ms. W. of Chester, and 208 NW. of London. Lon. 3° 35' W. lat. 53° 11' N.

Denbighshire, cty. of Wales, bounded on the S. by Merioneth and Montgomery shires, on the N. by Flintshire and the Irish Sea, on the W. by Caernarvon and part of Merionethshire. It is about 40 ms. long and 21 broad. The air is wholesome, but sharp; the cty. being pretty hilly, and the snow lying long on the tops of the mountains. The soil in general is barren. The chief commodities are black cattle, sheep,

goats, rye, and lead ore. The cty. sends two members to Parliament. Pop. 1801, 60,352, in 1811, 64,240, and in 1821, 74,511.

Denmark, kingdom of Europe: bounded on the E. by the Baltic sea, W. and N. by the ocean, and S. by Germany. The country is generally flat, and the soil sandv. The air is rendered foggy by the neighbourhood of the seas and lakes, of which it is full; but it has no considerable river. Denmark, properly so called, consists of Jutland, and the islands of Zealand and Funen, with the little isles about them. The king of Denmark's dominions, however, contain the duchy of Holstein, Iceland, the Faroe islands, and also Norway till lately; but in consequence of Denmark being in alliance with France, during the grand confederacy against that power, in 1813, the allies, under the crown prince of Sweden, soon after the battle of Leipsic, entered the king's dominions in the North of Germany, and after several severe battles, in which the Danes had to contend with very superior numbers, the king was compelled to conclude a treaty, wherein he ceded Norway to Sweden, and was to receive in exchange, Swedish Pomerania, and the Isle of Rugen. In the East Indies, Denmark possesses Tranquebar on the coast of Coromandel, and the Nicobar islands; in the West Indies, the islands of St. Thomas, St. Croix, and St. John; Christianburg on the coast of Guinea; and a small part of Greenland. Denmark was once a limited and elective monarchy; but, in 1660, it was made absolute and hereditary, by a revolution almost unparalleled in history; a free people voluntarily resigning their liberties into the hands of their sovereign. The inhabitants are protestants since the year 1522, when they embraced the confession of Augsburg. The manners and customs of the superior classes differ little from those in other parts of Europe; but the peasantry continue in a state of vassalage, except those of the crown. The revenues, which arise from the crown and duties, are supposed to amount to 1,500,000*l.* a year. The harbours of Denmark are well calculated for trade; and commercial companies are established to the East Indies, West Indies, and Africa. The produce of Denmark, beside fir and other timber, is black cattle, horses, butter, tallow, hides, pitch, tar, fish, oil, and iron. Copenhagen is the capital.

Denmark now contains:

Detroit, pst. and capital of Mich. territory. It is situated on the western bank of the strait St. Clair, or Detroit river, between Lake Erie and Lake St. Clair, 18 ms. N. of the W. end of the former, and 9 ms. below the latter. Fort Detroit is of an oblong figure, built with stockades, and advantageously situated, with one entire side commanding the river. The town is near a mile in circumference, and previous to its being burned in January, 1805, enclosed about 300 houses and a Roman Catholic church, built in a regular manner, with parallel crossing each other at right angles. It is rising again on a large scale, with wider streets. For 8 ms. below, and the same distance above Detroit, on both sides of the river, the country is divided into regular and well cultivated plantations, and from the contiguity of the farmers' houses to each other, they appear as two long extended villages. The inhabitants, who were mostly French, were about 2000 in number, in 1778, 500 of whom were as good marksmen as the Indians themselves, and as well accustomed to the woods. They raise large flocks of black cattle, and great quantities of corn, which they grind by windmills, and manufacture into excellent flour. The chief trade of Detroit consists in a barter of coarse European goods with the natives for furs, deer skins, tallow, &c. The exports from this place for the year 1804, amounted to 38,058 dollars. By the treaty of Greenville, August 3, 1795, the Indians have ceded to the U. S. the post of Detroit, and all the land to the N. the W. and S. of it, of which the Indian title has been extinguished by gifts or grants to the French or English governments. In 1807, the Indians, for \$59,500 ceded to the U. S. about 50,000,000 of acres, extending from fort Defiance on the Miami, 260 ms. on that river, lake Erie, the Detroit river and lake, the river St. Clair and lake Huron, including all the streams falling into those waters. The fort, &c. was delivered up by the British in July, 1796, according to treaty. Lon. W. C. $5^{\circ} 50'$ W. lat. $42^{\circ} 25'$ N.

Detroit River or *Strait of St. Clair*, issues from lake St. Clair, and enters the W. end of lake Erie, forming part of the boundary line between the U. S. and U. C. In ascending it its entrance is more than 3 ms. wide, but it perceptibly diminishes, so that opposite the fort, 18 ms. from lake Erie, it does not exceed half a mile in width; and from thence to St. Clair, it widens more than a mile. The chan-

nel of the strait is gentle, and wide and deep enough for shipping of great burthen, although it is incommoded by several islands, one of which is more than 7 ms. in length. These islands are of a fertile soil, and from their situation afford a very agreeable appearance. The length of the river is 28 ms., and several streams fall into it, chiefly from the north-west, viz. Bauche, Clara, Currière, Detroit and Huron rivers. There are several windmills on the Detroit, and an orchard adjoining almost every house. The settlers are numerous, and the improvements handsome and extensive. When the trees are in blossom, the prospect as you pass through the strait is perhaps as delightful as any in the world.

Devon, river of Sld. Perthshire, over which, in the beautiful vale of Glendevon, is a great curiosity, called the Rumbling Bridge. It consists of one arch, thrown over a horrible chasm, worn by the river, about 80 feet deep, and very narrow. In other places, the river has forced its way in a surprising manner, through the rocks. At the Chaldron-lin, it has worn away the softer parts of the stone, and formed immense pits, into which the water falls with a tremendous noise. Below this, the whole river is precipitated in one sheet, from a height of 40 feet.

Devonshire, cty. of Eng., 70 ms. long and 64 broad, bounded on the NW. and N. by the Bristol channel, E. by Somersetshire and Dorsetshire, SE. and S. by the English channel, and W. by Cornwall. It contains 1,600,000 acres; is divided into 32 hundreds, and 398 parishes; and has one city and 35 market towns. The air is so mild in the valleys, that the myrtle grows unsheltered; but it is cold and bleak on the mountains. The soil is various, for the low grounds are naturally fertile, and the hills are barren. In the eastern part there is plenty of good corn, and fine pasturage for sheep, where the grounds are dry and chalky.

The southern part is remarkably fertile; and fruit trees are plentiful, especially apples, with which a great quantity of cider is made.

On the coast is found a peculiar rich sand, of singular service to the husbandmen. The middle part is occupied by the forest of Dartmoor. The western part abounds with game, especially hares, pheasants, and wood-cocks; and here is a bird so very small that it is reputed a humming-bird, and like that constructs its nest on the extreme branches of trees. Devonshire was formerly more celebrated for its mines than even Cornwall; although the latter has nearly monopolized the trade, the stannary laws in some degree remain in force. Here are veins of loadstone; likewise quarries of good stone and slate, great quantities of which are exported. In the SW. parts are much marble, and in many places marble rocks are the basis of the high road. The principal rivers are the Tamar, Taw, Torridge, Ex, Teign, and Dart. Exeter is the capital. Pop. in 1801, 343,001, in 1811, 383,308, and in 1811, 439,040.

Dismal Swamp, marshy tract, on the coast of N. C., 50 ms. long and 30 broad. It occupies the whole country between Albemarle Sound and Pamlico Sound.

From the general course of the Blackwater and of the Chowan rivers, below their junction, an extensive flat peninsula is formed between Albemarle Sound, Chesapeake bay, and James'

river, of about 70 ms. in length, from N. to S., by 50 mean width, E. and W., or 3500 sqms. This extensive flat region is occupied by Currituck, Camden, Pasquotank, Perquimans, Chowan, and Gates cties. in N. C., and by the Isle of Wight, Nansemond, Norfolk, and Princess Anne cties. Virg. It is the central part which is occupied by the Dismal Swamp, but much of the residue is marshy, yet by the census of 1820, the 10 cties. comprise a pop. of 87,510 inhabitants. The canal already executed between the Albemarle Sound and Nansemond river, penetrates this tract.

As the Dismal Swamp canal is a very important link in the interior water-intercommunication of the U. S., I have been induced to swell the article by introducing the following documents from the National Intelligencer of March 4th, 1826.

This canal originated as long ago as the 1st of December, 1787, by an act of the Assembly of Virg. which act was concurred in by the Legislature of N. C.: these acts incorporated a Company, with authority to construct a navigable canal from the waters of Elizabeth river, in the state of Virg., to the waters of Pasquotank river, in the state of N. C.

This canal, according to the original design, is nearly completed, and has been in the receipt of tolls for a considerable time.

The canal is 22½ ms. in length, in breadth 38 feet at the surface of the water, and in depth about 5½ feet. Its south end terminates at Joice's creek, which empties into the Pasquotank river, 30 ms. from its mouth, at Albemarle Sound.

By an act of the General Assembly of Virg., which is concurred in by the Legislature of N. C., the company is authorized to cut a canal, connecting the Dismal Swamp canal with the North West river, at any point which they may select. This canal, which will be 5 ms. in length, will accommodate the interest of a large portion of the citizens of Virg. and N. C., and so much increase the commerce and profits of the Dismal Swamp canal, as to make it an object to the Company to perfect this small work.

A short cut of a mile at the S. end would take the canal direct to Pasquotank river, and avoid Joice's creek.

To make the Dismal Swamp canal correspond with the Chesapeake and Delaware canal is near as circumstances will admit, is considered of an important national character—but owing to depth of water in the sounds of N. C., which it is to connect with the Bay of the Chesapeake—the depth of this canal need only adapt itself to the depth of these sounds.

It is believed that a vessel of a capacity to navigate the sounds and pass through the Dismal Swamp canal, will be capable of navigating the bays and passing through all the canals N. of the Chesapeake.

The locks on the Dismal Swamp canal are, in their dimensions, nearly equal to the Chesapeake and Delaware canal, and their floors are placed so far below the bottom of the canal as to admit the passage of vessels drawing 7 feet water—and of the burthen of 75 or 90 tons.

A fact is stated by the President of the Company, that there is at this time in the trace of

the canal a coaster from N. Y., having passed through two locks, taking in a cargo, and bound to the port at which she cleared.

When the canal is finished so as to accommodate itself with the Chesapeake and Delaware canal, a reasonable prospect opens of having a water communication from Boston to Beaufort. in N. C. in the course of a few years.

These documents were extracted from the report made in the Intelligencer, of the proceedings of Congress in the House of Representatives on "A Bill for the subscription of Stock in the Dismal Swamp Canal Company."

Diss, town of Eng. in Norfolk, on the river Waveney, on the side of a hill; and at the W. end of the town is a large muddy lake, abounding with eels. There are manufactures of sail-cloth, linen cloth, hose, and stays. It is 19 ms. S. of Norwich, and 9½ NNE. of London. Lon. 1° 9' E. lat. 52° 25' N.

Diu, island at the entrance of the Gulf of Cambay, in the Deccan of Hindoostan, 3 ms. long and 1 broad. On it is a large fortified town of the same name, built of freestone and marble, and it contains some fine churches, erected by the Portuguese, about the time they took possession of the island in 1515. It is pretty large, and fortified by a high stone wall, well furnished with cannon. The trade of the town, once so important is almost entirely removed to Surat. It is 180 ms. W. by S. of Surat, and 200 NW. of Bombay. Lon. 69° 52' E. lat. 20° 42' N.

Dnieper, anciently the Boristhenes, a large river of Russia, which rises in the government of Smolensko, and flowing in a southerly direction, enters the Black sea, between Cherson and Orskow. From its source to its mouth, it now flows entirely through the Russian dominions.

The Dnieper is the third largest river in Europe, yielding only to the Volga and Danube. The basin of this great river is about 600 ms. in length, with a mean width of at least 300, giving an area of 180,000 sq. ms. It is in every respect a contrast to the Danube. The country drained by the latter is mountainous and broken; that by the former scarcely chequered by a single hill of any considerable consequence; the Danube is interrupted by cataracts, and cannot be passed from head to mouth; the navigation of the Dnieper, in all its branches, is only once interrupted, by a series of cataracts, which, begin below the mouth of the Sennara, and continue for about 40 ms., but these are passed in spring with little hazard, by loaded barks. The basin of the Dnieper lies between the parallels of 47° and 56° N. and is annually frozen from December to March.

Domingo, St. or *Hispaniola*, one of the richest islands in the W. Indies, 400 ms. in length, and 75 in breadth. It was discovered by Columbus, in 1492, and is surrounded by craggy rocks and dangerous shoals. The heat to the N. and SE. would be insupportable for 6 months of the year, if not qualified by the easterly winds; and frequent rains; but the latter soon spoil the flesh, bread, and fruits. It has a great many rivers, and mines of gold, talc, and crystal. The Spaniards had possession of the whole island for 120 years. They were afterwards forced to divide the island with the French, who obtained the W. part; and the Spaniards retained the E., the most extensive and fruitful. Since the revolution in France this island has been subject to great calamities. In 1791, an insurrection began in the French plantations, which, after a series of sanguinary scenes, has terminated in the establishment of a free African state, under the name of the Republic of Hayti. In 1821, the Spanish part fell also under the authority of Boyer, the president or king, and left him master of the whole island. St. Domingo has Cuba W., Porto Rico E., and Jamaica SW.

The pop. of this island in 1789, was from the best authorities, about 660,000 inhabitants, of which nearly 500,000 were black slaves. The French part contained 535,000, of whom 480,000 were slaves; the Spanish part 125,000, 15,000 of whom were slaves. It is probable that the present numbers do not materially differ in extent, though the number of whites have no doubt greatly diminished.

The trade of this island has greatly declined. The value of exports in 1791, exceeded 5,370,000l. sterling; \$23,832,800. Coffee amounted to 84,617,328 lbs. Sugar 217,463 casks. Indigo 3,257,610 lbs. Cocoa 1,536,017 lbs. and Cotton 11,317,226 lbs.

Domingo, St. capital of the E. part of the island of St. Domingo, on a navigable river, and had formerly an harbour, which is now choked up with sand. Though its trade has been long extinct, it was in a respectable condition while it continued in the hands of the

Spaniards. The city itself is large, well built of stone, and defended by batteries. Lon. $70^{\circ} 10' W.$ lat. $18^{\circ} 20' N.$

Dominica, one of the windward ^CCaribbee islands in the W. Indies. It lies about half way between Gaudaloupe and Martinico, and is 28 ms. long and 13 broad. It was taken by the English in 1761, and confirmed to them by the peace of 1763. The French took it in 1778, but restored it in 1783. It suffered great damage by a tremendous hurricane in 1806. The soil is thin, and better adapted to the rearing of coffee than sugar; but the sides of the hills bear the finest trees in the W. Indies, and the island is well supplied with rivalets. The capital is Charlotte-town.

Dominica, largest of the islands of the Pacific Ocean, called the Marquesas. Lon. $139^{\circ} 2' W.$ lat. $9^{\circ} 41' S.$

Don, large river, that according to most English maps, [see *Europe*] separates Europe from Asia. It issues from Lake St. John, in the government of Moscow, and divides near Tcherekask, into 3 streams, which fall into the sea of Asoph. This river has so many windings, is in many parts so shallow, and abounds with such numerous shoals, as to be scarcely navigable, except in the Spring, on the melting of the snows, and its mouths also are so choked up with sand, that only flat-bottom boats, except in the same season, can pass into the sea of Asoph.

Don, river of Stld., which rises in Aberdeenshire, joins the Erie Water at Inverary, and passing by Kintore, falls into the German ocean at Aberdeen, within 2 ms. of the mouth of the Dec. Upon each of these rivers is an excellent salmon fishery.

Doneschingen, town of Suabia, in the principality of Furstenburgh. It is the chief residence of the prince of Furstenburgh, in the court-yard of whose palace, the Danube takes its rise. Some small springs bubbling from the ground, form a basin of clear water, about 30 feet square. From this issues the Danube, where is here only a little brook; and though the small rivers Briach and Brege, uniting below the town, are far more considerable than this stream, which flows into them soon after their junction, yet has this alone the honour, of being called the source of the Danube.

Druses, people of Syria, on the mountains Libanus and Antilibanus. They are warlike, inured to labour, are great enemies to the Turks, and have their particular princes, called Emirs.

The Druses amount to about 120,000 persons, and are a very peculiar people, equally indifferent to the Mahometan or Christian religions, they profess neither. It is shown by Malte Brun, from almost irresistible evidence,

that they are the Iturei of the Greeks and Romans, and that, amidst the murderous revolutions of ages this small band of mountaineers have maintained their independence. They are ruled by an hereditary prince. Their rocky territory, subdivided into the districts of Matné, Garb, Sahel, Chouf, Tefa, Chagif, and Djoord, lies between Damascus and the Mediterranean. Chief town Deir-el-kamar.

Dublin, capital of Ireland, in a cty. of the same name, with a bishop's see; seated on the Liffey, in view of the Irish Sea on the E. Its form is that of a square, 2½ ms. in extent on each side, and it contains about 22,000 houses, with 80 inhabitants are estimated at 156,000. With respect to its streets, Dublin bears a near resemblance to London; some of the old streets were formerly narrow, but great improvements have been lately made, in regard both to convenience and embellishment; and there are several magnificent squares, the largest of which is St. Stephen green, nearly a mile in circuit. It has a cathedral and a collegiate church, 18 parish churches, 8 chapels, 16 Roman catholic chapels, numerous meeting-houses for dissenters of various denominations, 4 foreign churches and a synagogue.

Among the principal public buildings are the castle (the residence of the viceroy) the national bank, Trinity college, the hall of justice, the royal exchange, the custom-house, the royal hospital of Kilmalsham for invalids, the linen-hall, the barracks, the toll-tell, or town-house, and Essex bridge and Sarah bridge, 2 of the 6 bridges over the Liffey. The hospitals and other charitable institutions are numerous; and it has 2 theatres. The Phoenix park, at the W. end of the town, is a royal enclosure, 7 ms. in circuit; and, beside the Hibernian school, is adorned with the villa of the viceroy, the seat of the principal secretary, and a few others; also a salute battery of 22 pieces of cannon, and the ammunition magazine, a strong fortification. An observatory is erected on a rocky hill, about 4 ms. NW. of the city. The civil government of Dublin is executed by a lord mayor, recorder, 2 sheriffs, 24 aldermen, and a common council, formed of representatives from the 25 corporations. Beside the silk, woollen, and cotton manufactures carried on in the suburbs, other branches of useful manufacture are establishing in different parts of the metropolis; and its foreign trade is considerable.

The harbour is incommoded by two banks of

sand, which prevent vessels of large burden from going over the bar; it has a mole nearly 4 ms. in length, with a lighthouse at the extremity, and another on the promontory opposite, called the hill of Howth. Three ms. below the city, at a place called the Pigeon-house, is a commodious dock; and here the packets receive and land their passengers. The Liffey divides the city into almost two equal parts, and has spacious and noble quays on both sides. A grand canal has been made from the Liffey, which communicates with the Shannon near Clonfort. Dublin is seated at the end of a spacious bay 7 ms. from the Irish Sea, 60 W. of Holyhead, in Wales, and 300 WNW. of London. 6° 13' N. lat. 53° 21' N.

Dunkard, tp. Green cty. Penn., on the W. side of the river Monongahela, and bounded on the S. by the line that divides Penn. from Vir. Pop. 1820, 1472.

Dunkeld, town of Stld., in the shire of Perth, seated on the N. side of the river Tay, in a situation truly romantic, under and among very high, and almost inaccessible crags. Dunkeld is 12 ms. N. of Paris. Lon. $3^{\circ} 36'$ W. lat. $56^{\circ} 35'$ N.

Dunkirk, considerable seaport of France, in the department of the North and late French Flanders, 22 ms. SSW. of Ostend. Lon. $2^{\circ} 28'$ E. lat. $51^{\circ} 2'$ N.

Dunkirk, small pstv. and port on lake Erie, Chataque cty. N. Y. The harbour lies in form of a semi-ellipse. It is sheltered to the NW. by a point of land, and on the N. by a reef of rocks, on which there is only about 2 feet water. It is the only harbour from Buffalo to Erie, on the N. Y. and Penn. shore. From Buffalo 45 ms., and from Canadaway or Fredonia 4 ms.

Dunkirk, pstv. in King and Queen cty. Virg., 75 ms. from Washington.

Dun-le-roi, town of France, in the department of Cner, and late province of Berry, 20 ms. S. of Bourges. Lon. $2^{\circ} 29'$ E. lat. $46^{\circ} 45'$ N.

Dunlop, village of Stld. in Ayrshire, in the district of Cunninghame, celebrated for rich and delicate cheese.

Dunlapville, pstv. on E. branch of White Water river, Union cty. Ind., 50 ms. NW. from Cincinnati, and 83 a little S. of E. from Indianapolis.

Dunmow, Great, town of Eng. in Essex, with a manufacture of baize. It is 43 ms. N. of Chelmsford, and 46 NE. of London. Lon. $0^{\circ} 24'$ E. lat. $51^{\circ} 54'$ N.

Dunmow, Little, village of Eng. in Essex, adjoining to Great Dunmow.

Dunning Street, pstv. Saratoga cty. N. Y. 30 ms. N. from Albany.

Dunnington, town of Eng. in Lincolnshire, 27 ms. SE. of Lincoln, and 111 N. of London. Lon. $0^{\circ} 7'$ W. lat. $52^{\circ} 53'$ N.

Dunmore, cape on the S. side of the Isle of Wight. Lon. $1^{\circ} 16'$ W. lat. $50^{\circ} 33'$ N.

Dunnsbury, pstv. Lycoming cty. Penn.

Dunse, town of Eng. in Berwickshire, between the forks of the rivers Blackadder and Whiteadder, in a rich and fertile country, 12 ms. W. of Berwick upon Tweed. Lon. $2^{\circ} 3'$ W. lat. $55^{\circ} 46'$ N.

Dunstable, town of Eng. in Bedfordshire, on a dry chalky hill, and has four streets which regard the four cardinal points. The church is the remainder of a priory, and opposite to it is a farm-house, once a royal palace. Dunstable is famous for elegant baskets, &c. made of straw, which are even an article of exportation. It is 34 ms. NW. of London. Lon. $0^{\circ} 29'$ W. lat. $51^{\circ} 59'$ N.

Dunstable, pst. Hillsborough cty. N. H., lying on the river Merrimack, about 40 ms. NW. of Boston. Pop. 1820, 1142.

Dunstable, tp. Middlesex cty. Mass., on the W. side of Merrimack river, 25 ms. NW. of Boston. Pop. 1820, 584.

Dunstable, tp. Lycoming cty. Penn. Pop. 1820, 474.

Dunstanville, pstv. Edgefield district, S. C., by pstrd. 67 ms. W. from Columbia.

Dunster, town of Eng. in Somersetshire, with a harbour on the Bristol Channel. It is 20 ms. NW. of Taunton, and 158 W. of London. Lon. $3^{\circ} 41'$ W. lat. $51^{\circ} 13'$ N.

Dunwich, borough of Eng. in Suffolk, at the top of a loose cliff, 24 ms. S. of Yarmouth, and 99 N. of London. Lon. $1^{\circ} 55'$ E. lat. $52^{\circ} 21'$ N.

Dunwich, tp. U. C., cty. of Suffolk, lies to the W. of Southwold, having the river Thames for its N. and Lake Erie for its S. boundary.

Dupage, lake, Ind., in the river Des Plaines, 6 ms. above its junction with the Kanabakee.

Duplin, cty. N. C., bounded by New Hanover S., Sampson W., Wayne N., Lenoir and Jones NE., and Onslow E., length 32 ms., mean width 20., area 640 sqms. Surface generally level, or moderately hilly, and soil thin and rather sterile. Pop. 1820, 9744, N. lat. 35° , and lon. 1° W. from W. C. intersect very near the centre of this cty.

Dupreecille, village, Northampton cty. N. C., between Meherrin and Roanoke rivers, 245 ms. SSW. of Washington.

Dnequela, province of Africa, in the kingdom of Morocco, about 75 ms. in length, and 85 in breadth. It abounds in corn and cattle.

Durumpour, town of the Deccan of Hindoostan, in the province of Gikharat, 46 ms. NNE. of Bombay. Lon. $73^{\circ} 14'$ E. lat. $20^{\circ} 32'$ N.

Durance, river of France, which rises near Briançon, and watering Embrun, Tallard, Sisteron, Monosque, and Cavillon, falls into the Rhone, below Avignon.

Durand, tp. Coos co. N. H. Pop. 1820, 78.

Durango, city of Mexico, and capital of the state of same name, is situated on the western side of the great Cordilleras of Anahuac, 570 ms. NW. from the city of Mexico. According to Humboldt, this city stands nearly 7000 feet above the level of the ocean. N. lat. $24^{\circ} 25'$, lon. W. C. $26^{\circ} 35'$ W. The environs of Durango appear volcanic. The largest mass of that very remarkable substance, native iron, ever yet discovered, were found near this city; its weight supposed to be 40,000 lbs, avoirdupois. The pop. was estimated by Humboldt, at 12,000.

Durango, formerly an intendancy, and now a state of the Mexican Republic, generally known as New Biscay. It was one of the internal provinces. As a state, it is bounded SE. by Zacatecas, S. by Jalisco, E. by New Leon, N. by Chihuahua, and W. by Sonora y Sinaloa. Area uncertain, but about 40,000 sqms. Ctl. lat. 26° N. lon. W. C. 27° W. According to Malte Brun, the great central chain, or rather table land of Anahuac, traverses this state, with craters of volcanoes (extinct.) The mines of silver are common, and abundant in that precious metal. Humboldt informs us, that the general level exceeds 6500 feet, above the ocean, but declining to the E. and W. As a level in N. America of about 400 feet, is equivalent to a degree of lat., the climate of Durango, must be similar to that on the Pacific coast of upwards of 40° N.; and of course, the vegetable productions generally, grain, grasses, and fruits of the same species of those of the middle states of the U. S. The winters, says Malte Brun, are severe, and followed in summer by suffocating heats, precisely the character of the climate of Quebec. Durango has in its geographical features, a very strong resemblance to the high central plains of Mongolia, and Soongaria in Asia. Rivers here rise, and finding no outlet, are lost in lakes, or wasted in sands. The pop. is necessarily thin, but they are in a peculiar degree hardy, muscular, and patient of fatigue. If the number, 16,000, on Tanner's map of Mexico be correct, as to the share allotted to Durango, the inhabitants amount to only about $\frac{1}{24}$ to the sqm., and of these, a large proportion in the capital. The latter distribution is, however, in the Spanish provinces by no means peculiar to Durango. Capital Durango.

Durant's Bay, N. C. Albemarle Sound. Lon. W. C. $0^{\circ} 44'$ E.

Durazzo, village of Albania, with a good harbour, on the Gulf of Venice, 50 ms. N. of Valona. Lon. $19^{\circ} 19'$ E. lat. $41^{\circ} 54'$ N.

Durby, town of French Luxemburg, capital of a city of the same name, on the Ourte, 20 ms. S. of Liege. Lon. $5^{\circ} 28'$ E. lat. $58^{\circ} 18'$ N.

Durckim, town of Germany, in the palatinate of the Rhine, 12 ms. NE. of Neustadt.

Lon. $8^{\circ} 21'$ E. lat. $49^{\circ} 26'$ N.

Duroy, town of Germany, in the dutchy of Juliers, on the river Roer, 12 ms. S. of Juliers. Lon. $6^{\circ} 40'$ E. lat. $50^{\circ} 44'$ N.

Durham, city of England, called the bishopric of Durham; bounded on the N. by Northumberland, on the E. by the German Ocean, on the S. and SW. by Yorkshire, and on the W. by Westmoreland and Cumberland. It extends 37 ms. from N. to S., and 47 from E. to W.; contains one city, 7 market towns, and 113 parishes, and sends 4 members to parliament. Its rivers are the Tees, Uinc, Were, Tame, Lune, Derwent, Gauntless, Skern, &c. Its principal products are lead, coals, iron, corn, mustard, salt, glass, fine ale, with excellent butter and salmon. The soil is various; the S. rich, but the western parts rocky and moorish. Pop. 1801, 160,361, in 1811, 177,625, and in 1821 207,673.

Durham, capital of the city of Durham, and a bishop's see. Has a manufacture of shalloons, tammies, and calamancoes, and around it are grown large quantities of the best mustard. Nevil's Cross, near the city, was erected in memory of the victory obtained by queen Philippa in 1346, over David Bruce, king of Scotland, who was taken prisoner in this battle. Durham sends two members to parliament, is 14 ms. S. of New Castle, and $25\frac{1}{2}$ by W. of London. Lon. $1^{\circ} 27'$ W. lat. $54^{\circ} 50'$ N.

Durham, tp. Hufckingham city. L. C., between Wickham and Melborne, 60 ms. E. from Montreal.

Durham, tp. of Cumberland, Maine, on the SW. side of Sagadahoc river, about 12 ms. above its junction with the river Kennebec. Pop. 1820, 1562.

Durham, pst. Stafford city. N. H., W. from Great Bay, and 12 ms. W. from Portsmouth. Pop. in 1820, 1538.

Durham, pst. Middlesex city. Conn., 7 ms. S. from Middletown. Pop. in 1820, 1196.

Durham, pst. Green city. N. Y., 20 ms. NW. from Athens. Pop. in 1820, 2979.

Durham, city. U. C., bounded on the E. by the city of Northumberland; on the S. by lake Ontario, until it meets the westernmost point of Long Beach; thence by a line running N. 16° W., until it intersects the southern boundary of a tract of land belonging to the Missassago Indians; and thence along the said tract, parallel to lake Ontario, until it meets the northwesternmost boundary of the city of Northumberland.

Durham, northern tp. of Bucks city. Penn., on the W. side of the river Delaware, 12 ms. S. from Easton. Pop. in 1820, 485.

Dursley, town of Eng. in Gloucestershire. It is inhabited by clothiers, and seated near the Severn, 13 ms. SW. of Gloucester, and 107 W. of London. Lon. $2^{\circ} 25'$ W. lat. $51^{\circ} 40'$ N.

Durtal, town of France, in the department of Maine and Loire, and late province of Anjou, whose chief trade consists in tanning.

Dusky Bay, bay of the island of New Zealand, in the S. Pacific Ocean. Lon. $166^{\circ} 18'$ E. lat. $45^{\circ} 47'$ S.

Dusseldorf, strong city, capital of the dutchy of Berg. It contains about 18,000 inhabitants, including the garrison. Dusseldorf derives an

air of dignity from its palace and great church. It is seated on the river Dussel, near the Rhine, 22 ms. NW. of Cologne. Lon. $6^{\circ} 52' E$, lat. $51^{\circ} 12' N$.

Dutchess, cty. of N. Y., bounded E. by Conn., S. by Putnam cty. in N. Y., W. by Hudson's river, and N. by Columbia cty. N. Y.; length 35 ms., mean width 24; area 840 sqms. The face of this county is in a peculiar manner diversified. In the valleys of the Housatonic, Fishkill, Wappinger and Jansen, are extensive bodies of first rate land. In the intermediate space between those rich vales, extend fertile tracts of high land little less productive. The banks of the Hudson are steep, rocky and broken, and indeed generally precipitous. On its southern boundary, this cty. rises into mountains, some of the peaks of which exceed 1200 feet above the level of tide water. These are the celebrated Highlands, which inflecting first to NE. and thence N. through Dutchess into the SE. angle of Columbia cty. separate the sources of the Housatonic from those of the creeks falling into the Hudson, and gives to the eastern side of Dutchess a bold and mountainous aspect. From the elevated ground from which they flow, and the comparatively deep chasm in which the Hudson is confined, the creeks of Dutchess are eminently calculated for the propulsion of machinery, an advantage to a considerable extent improved by the inhabitants. See *Matrovan, Wappingers Creek, &c.* This country is well cultivated and productive in grain, fruits and meadow grasses. Its staples are numerous, and consist of grain, flour, whiskey, beef, pork, butter, cheese, live stock, orchard fruits and garden vegetables. Chief town, Poughkeepsie. Pop. 1820, 46,615, Ctl. lat. $41^{\circ} 45' N$, lon. W. C. $5^{\circ} 59' E$.

Dulkingen, town of Suabia, on the Danube, over which it has a bridge. It belongs to the king of Wurttemberg, and is 63 ms. NW. of Constance. Lon. $9^{\circ} 2' E$, lat. $48^{\circ} 10' N$.

Dunotzburg, pst. Northampton cty. Penn., on the W. bank of the Delaware, at its entrance into the Watergap and at the foot of the Blue Mountain on the N. side, in Smithfield tp. It is 25 ms. N. from Easton.

Dutton, pstv. Penobscot cty. Maine, 135 ms. NE. from Portland.

Duxborough, pst. Plymouth cty. Mass., 10 ms. N. from Plymouth. Pop. in 1820, 2403.

Duxbury, tp. of Washington cty. Ver., on

the left side of Onion river, 13 ms. below Montpelier. Pop. 350.

Duyvland, one of the islands of Zealand, in the kingdom of the Netherlands, E. of Schowen, from which it is separated by a narrow channel.

Dwina, southern, large river of Russia, which rises in the government of Polotsk, Smolensk, Vitepsk, flows first 180 ms. to the SW. thence turns to NW. 250 ms. falls into the Gulf of Riga, below the city of Riga. The Dwina, following the windings of the stream, is navigable above Riga upwards of 400 ms. to Toropetz, from whence it is connected by a canal with the higher branches of the Dnieper. The basin of the Dwina, lies between 55° and $57^{\circ} N$, of course in winter is frozen, but similar to every stream in the great plain of Russia, is unobstructed by any serious impediment to its navigation, from rocks or shoals.

Dwina, northern, river of Russia, and a much more considerable stream than the southern river of the same name. The northern Dwina rises by two great sources, the Vezegda in the government of Archangel, and the Soukhona in that of Vologda. The two latter are in a peculiar manner remarkable, flowing directly towards each other; the Soukhona, to the NE. by E. and the Vezegda, NW. by W. each about 250 ms. The Vezegda and Soukhona, literally meet, and forming the Dwina, turn to the NW. 250 ms. falls into the White sea at Archangel. The Dwina affords an unbroken navigation from Archangel, to the White sea and from Vologda, near which it might communicate with the Shaxna, and of course with the Neva and the Volga. Eastwards, by the Vezegda, and its branches, navigation is carried to near the foot of the Ural mountains. The basin of the Dwina lies between N. lat. 59° and $65^{\circ} N$, and yet abounds in forests, principally resinous trees.

Dyersburg, tp. of Wayne cty. Penn. on the Lackawaxen Creek. Pop. 1820, 1082.

Dyer's Island, in the head of the bay of Quinte, lies to the eastward of Mississauga Island, U. C.

Dyer, pstv. Dyer cty. Ten.

Dyer, cty. of Ten., situation, and boundaries uncertain. It has been recently erected.

Dysart, borough of Stld. in Fifeshire, seated on the Frith of Forth, 11 ms. N. of Edinburgh. It has a considerable trade in coal. Lon. $3^{\circ} 6' W$, lat. $56^{\circ} 9' N$.

Eagle, tp. of Brown cty. Ohio. Pop. 1820, 2133

Eagle, creek of Adams and Brown counties Ohio, falls into Ohio river, 10 ms. below Mayaville.

Eagle Creek, pstv. St. Charles cty. Miss., 25 ms. from St. Louis.

Eagle, tp. Hocking cty. Ohio.

Eagle Island, tp. of Hancock cty. Maine Pop. 1820, 5.

Eagleville, village, tp. of Manlius Onondago cty. N. Y.

Eagleville, village, Marengo cty. Al., on Tombigbee, at the mouth of the Black Warrior.

Enosue, one of the Friendly Islands in the S. Pacific Ocean, discovered by Tammán, in 1643, and by him named Middleburg. Lon. $174^{\circ} 59' W$, lat. $21^{\circ} 24' S$.

Essex, tp. of York cty. L. C. on Ottawa river.

Earl, tp. of Berks cty. Penn., 12 ms. NE. from Reading. Pop. 1820, 509.

Earl, tp. of Lancaster cty. Penn., on Conowingo creek, 12 ms. above Lancaster. Pop. 1820, 5539.

Farallon, town of Eng. in Herwickshire, on the river Leader, 35 ms. SE. of Edinburgh.

Earn, river of Sthl., which issues from the lake of Earn, in Perthshire. It meanders for above 20 ms. through the valley of Strathearn, and joins the Tay below Perth.

Earne, lake of Ireland, in the cty. of Perma-nagh, 30 ms. in length. It is narrow in the mid-dle, and in this part is an island on which stands Enniskillen.

Earth. This is a novel article in a Geogra-phical Dictionary, though obviously necessary, as under it many objects of primary importance can be engrouped and brought into one point of view; and, by an easy reference, enable the reader to take a connected prospect of the whole planet. Under no other head could any notice be taken of what ought to comprise part of every treatise on geography—the causes of the discrepancies between the seasons on the two opposing sides of the Atlantic Ocean. To dwell farther on the propriety of introducing what I deem the primary article, would be to insult the understanding of the reader.

The Earth is a primary planet revolving round the sun in 365½ days, at a mean distance from that luminary of 95,000,000 ms. The Earth's orbit is included between those of Ve-nus and Mars, and is the third from the sun, having Mercury and Venus as inferior planets. The Earth's mean diameter is, in our books, ge-nerally, assumed at 7964 statute ms., and for all practical purposes this number can be safely used. A diameter of 7964 ms. gives a circum-ference of 25,018 ms. very nearly. The form of the Earth is that of an oblate spheroid, or a compressed globe; an apple affords a natural example of such a solid. Though, however, found to have this form, the recent, extensive, and very rigorous measurements made on its surface, suggested a doubt of its being abso-lutely a solid of rotation; observations were made, particularly in Europe, from which in-equalities were found, which could not be as-cribed to errors in the operations. The skill in the use of, and the admirable accuracy of modern mathematical instruments, superinduce a high degree of confidence in the measure-ments made in France, Great Britain, and other parts of Europe. We are, therefore, justifiable in considering the Earth as a solid, with a very near approach to an oblate spheroid, but de-viating from such regular figure, so far as to render the discrepancies discoverable by sci-entific observation and measurement on its sur-face.

It must be understood that this deviation from an oblate spheroid is different from that which arises from land elevations. When the measures were executed in Eng. and France, every allowance was made for the difference of level, and it was reducing the results to the curve of a spheroid; that led to the discovery, that oceanic level could not be uniform over every part of the same latitude.

A sphere having a diameter of 7,964 ms. would have a curve superficies of 199,256,891 sqms. As the error is no material, I have cal-culated the Earth's surface as that of a sphere, and in all practical applications assume the curve area at 200,000,000 sqms.

This surface is enveloped by an aerial ocean differing in density in a ratio with relative ele-vation. The height of the atmosphere, having sufficient density to reflect light is supposed to be 45 ms. Animal life as shown by the Condor, and ascent in balloons can be sustained to up-wards of 4 ms. If we allow 36 ms. as the depth of the atmosphere of any considerable density, and consider it, as it is in reality, a constituent part of the planet, the Earth's dia-meter would be 8,000 ms.

Beneath the atmosphere, the solid surface is unequally divided into land and water. The oceanic surface, in round numbers amounting to 160,000,000 sqms. and the terraqueous to 40,000,000 sqms.

In an article necessarily brief, I cannot be ex-pected to enter into astronomical disquisitions, must therefore suppose the reader acquainted with the fact, that the Earth moves in its orbit with its axis of rotation inclined 23½° to the plane of its motion; and that this inclination is the cause of the seasons, and of the inequality of day and night. When we are acquainted with the fact that the Earth's axis is declined, we must at once perceive that in such a plane-tary revolution, the sun must become vertical, over an angle of the Earth's surface on each side of the equator, equal to such declination; and that a circle round each pole, also equal to such declination must be annually exposed to the continual presence of the sun above, or its total depression below the horizon. From these phenomena, it arises; that a zone of the Earth, amounting to double the angle of decli-nation, or 47° in breadth, is exposed annually to the vertical rays of the sun. This is called the *Torrid Zone*, and extends from N. lat. 23° 30', to S. lat. 23° 30'. The northern extremity known as the Tropic of Cancer, and the south-ern as the Tropic of Capricorn.

At a distance of 23° 30' from each pole is an imaginary circle, called the *northern or south-ern* polar circle. Within these circles as already observed, the sun either passes entirely round above or below the horizon, at the Solstices, and produces constant day or night. These circles have been, though erroneously, designa-ted the *Frigid Zones*.

The two *Frigid Circles*, and the *Torrid Zone* taken together, embrace 94° of a meridian of the Earth drawn from pole to pole; leaving 43° between either tropic and its respective po-lar circle. These Zones between the polar circles and the tropics are called *Temperate Zones*.

Using round numbers, and calculating the curve area of each Zone by the principles of the sphere, we find:

| | | |
|------------------------|---|------------------|
| In the Torrid Zone | - | 80,000,000 sqms. |
| In the Frigid do. each | - | 8,250,000 |

| Temperate, do do. | - | 51,250,000 |

Several very interesting remarks are suggested by a review of these tables. We find upwards of one half the land area of the Earth N from the Tropic of Cancer; and including the Torrid Zone, above 9-10 N from the Tropic of Capricorn. Excluding the two Polar Circles, very nearly one half the residue is included in the Northern Temperate Zone. The Northern Polar Circle contains a large portion of land, whilst that of the S. is almost entirely in water.

If taken generally, the terraqueous Earth is divided into two great continents, called Eastern and Western, relative to the Atlantic Ocean. The two continents range at nearly right angles from each other; the eastern from SW. to NE., and the western from SE. to NW., each about 10,000 ms. in length. Both continents expand on the northern extremity, and contract into points towards the S. This structure is shown, on the large scale, in Asia, Africa, S. America, N. America, and Greenland. Both continents cross the equator and extend over the Torrid into the southern Temperate Zone, thus opposing two complete barriers, against the continuity of the tropic counter-current.

The oceanic masses around the two poles, have but two lines of communication; one by the Pacific, between America and Asia; the second by the Atlantic, between the two continents generally. The Asiatic and American continents, under the northern polar circle, are so nearly in contact as to leave only a strait of 40 ms. wide, to unite the Pacific and Arctic oceans. The Atlantic ocean is in no place less than 1000, and averages upwards of 2000 ms. in width, and produces, as will be seen in the sequel, a very extensive influence on meteorology, and upon the habitable land of Europe and NW. Africa. The open expanse of the Atlantic occupies about the one-seventh part of the curve superficies, and stretches, at very nearly right angles to the diurnal motion of the Earth. The Atlantic thus affords an expansive aquatic surface, connecting the Polar extremities of this planet.

The Earth turns round its axis once in 24 hours, and consequently 15 degrees of its meridians revolve hourly; therefore, by multiplying the breadth of any number of degrees of longitude by 15, we have the hourly motion of that part of the Earth's surface round the axis; as for example, in lat. 45° a degree of longitude is 48½ English ms. wide, within a trifling fraction. From these elements, it results, that particles of matter at lat. 45° , on the surface of the Earth, revolve about 650 ms. hourly. This is nearly the mean motion; as the maximum at the Equator is a fraction less than 10½ ms. hourly, and decreasing along the meridians, until it becomes 0 at either pole.

It is evident from the preceding data, that the atmospheric and oceanic masses composing the outer envelope of the Earth, are moved along with the decumbent nucleus, and with a velocity decreasing from the equator to the poles. By the laws of matter, if any, the least retardation operates on the atmosphere and oceanic waters, a counter current must be formed, flowing, with greatest rapidity where the supposed retardation is in excess. That excess must arise along the equator where the horary motion is at the maximum. Such a current does actually exist, and has received the name of *Tropic Current*. Another cause however, contributes to increase the quantum and velocity of the Tropic current. The Earth revolving from W. to E., produces an apparent motion of the Sun in a contrary direction. Immediately under the Sun, or where the beams of that luminary are direct, a vacuum is produced, into which the circumambient air rushes; and as this vacuity is carried westward along the equator, upwards of 1035 ms. hourly, an atmospheric current follows, which acting on the ocean waters, impel them westward, and adds force and mass to the tropic current.

If the surface of the Earth was composed of uniform matter, that is, matter which would be acted on equally by any cause of motion; in brief, by water itself, the tropic current would be also uniform, and flow regularly round, in a ratio with the motion of the meridians. The tropic current is, however, broken by land, which, as we have seen, traverses the equatorial section of the Earth. This oceanic current is not only broken, but also deflected; particu-

larly in the Pacific and Atlantic Oceans. In the former, from the wide opening to the S., and the numerous inlets from the Pacific to the Indian, the current gradually wastes, but in the latter ocean, from the peculiar structure of its shores, a very remarkable phenomenon, the *Gulf Stream*, is produced. South America, in form of an immense triangle, is based on the Pacific, and protrudes its perpendicular angle into the Atlantic, at S. lat. 6° . This salient point is Cape St. Roque, from which the continent extends to the NW., crosses the equator, and stretches beyond the northern tropic, and forms in the Gulf of Mexico, an immense reservoir. Here the continent again turns at right angles, and continues NE. into the northern polar circle. The very deep indenting of the American continent in the Gulf of Mexico, and the long line of coast from its recesses, into the southern section of the torrid zone, is in a peculiar manner calculated to produce that very extensive reflux, which constitutes the largest whirlpool on the globe. Its effect on meteorology I shall briefly notice, as that effect is in turn a cause which very deeply influences the climate of the United States. The western tide carried across the Atlantic from the African, is borne upon the American coast, and subdivided by Cape San Roque. The latter coast, from San Roque to the bottom of the Gulf of Mexico, intersects obliquely, and by an angle of 45° the line of the tropic flood; accumulates that flood in the Mexican Gulf, out of which it issues through the Cuba, and Bahama channels. Thus from the tropic of Cancer over the Atlantic ocean to the NE., an enormous volume of water, heated at all seasons from 6° to 80° above the temperature of the adjacent ocean, flows along the coast of North America, from Cape Florida towards the northern Atlantic. This great oceanic river of warm water, averaging about 60 ms. in width, superinduces a corresponding increase of atmospheric temperature, and consequently the air over the gulf stream, is at all times warmer than that over the adjacent ocean, in similar latitudes.

Though, as I have noticed, the structure of the Pacific coasts does not admit such prominent reacting currents as exist in the Atlantic, yet similar effects are partially produced in the former, and a counter current does flow towards the NE. along the SE. coast of Asia. These two vast bodies of heated fluid thus perpetually pass along in front of the two largest land protuberances on the two continents.

The earth in motion round its axis from W. to E., carries with it the body of the atmosphere. That aerial mass having a constant tendency to fall southward into the tropic vacuum, and at the same time moving along eastward with other parts of the earth—like all bodies acted upon by two forces in different directions assumes a line of motion between the lines of impulsion, and moves from the polar regions to the south-east in the northern hemisphere, and to the north-east in the southern. This general law of aerial motion, is, it is true, liable to great interruption in its operation by the contiguity of land and water; from the unequal elevation of land protuberances, and from other more local and minor causes; but still, it

is the ruling principle upon which the motion of air depends.

I shall close this section of the article before us, by a few practical observations. Asia and N. America, with Greenland, are the two most extensive land masses on the respective continents which rise above the oceanic level. These two continents are crossed by the northern tropic. If we suppose the sun vertical over the southern tropic, as it is at the winter solstice of the northern hemisphere, then is N. America and Asia covered in great part with ice and snow, and even the Arctic Ocean mostly frozen. If we then turn our attention to the atmospheric motion, it is obvious, that the cold, condensed, and heavy air of the two great continents must flow south-east towards their respective oceanic basins. It is the natural operation, therefore, of atmospheric motion which gives to the south-east coasts of Asia and N. America such severe winters.

Amid all other changes, however, the Atlantic Ocean remains open, and presents an unfrozen surface, upwards of 1000 ms. wide, far into the northern polar circle. The winds over the Atlantic during our winter are from the NW. generally, as is the case every where else in high northern latitudes, but in respect to Europe, and NW. Africa, their winter winds coming from the open bosom of a fluid ocean, are moist, therefore rain is the consequence. It would be needless to go farther to explain the causes why vegetable and animal life can be sustained in the N. of Europe in latitudes condemned to frost and sterility in America and Asia. See *Basin of the Baltic*.

The causes which produce in turn the intense summers of Asia and N. America are equally simple with those which influence their winters. When the sun is vertical over the northern tropic, at the summer solstice of the northern hemisphere, the region of snow and frost is restricted to the polar circle, and all the southern and central parts of both continents become intensely heated. A vacuum is partially created over the land, which introduces the less heated, and, at that season, the heavier air, from the Atlantic and Pacific Oceans; but even the air from the ocean we have shown to be itself heated by the tropic currents;—consequently China and the U. S. have the summers of the torrid and winters of the frigid zone. See the respective articles, *Asia, Europe, America, &c.*

These observations on the physical properties of the Earth, though necessarily brief, ought to comprise a concise view of its density.

It had been suggested by Newton, that large mountain masses would deflect a plumb line from a perpendicular to the horizon. Bouguer and Condamine, two of the French mathematicians who were sent to Peru to measure a degree of the meridian, made experiments to show how much a plumb line would be deflected by Chimborazo. Their operations gave a result of 8 seconds.

"This interesting experiment," says Dr. Brewster, in his *Encyclopædia*, Art. *Attraction*, "was repeated by the learned Dr. Maskeline, with a view, not merely of ascertaining in general the attractions of mountains, but for the

purpose of determining from the results, the mean density of the Earth. The hill of Shehallien, Perthshire, in Sld., was reckoned the most convenient for this purpose, and preparations were made for executing this laborious undertaking, in the summer of 1774. An observatory was erected about half way up the N. side of the hill, and was afterwards removed to a similar position on the S. side. No less than 337 observations were made with an excellent zenith sector of Sisson's, upon 43 fixed stars; and it appeared from these observations, that the difference of lat. between the two stations, was $54^{\circ}.6'$. By the trigonometrical survey, it was found, that the distance between the two stations was 4364.4 feet, which in lat. $56^{\circ}.40'$ answers to a difference of lat. of $43^{\circ}.94'$. The difference between these results, $11^{\circ}.66'$, is obviously the sum of the two deflections of the plumb line, and therefore, $5^{\circ}.66'$, is the measure of the attraction of Shehallien."

Dr. Charles Hutton, from the data obtained by these observations, and by an accurate survey of Shehallien, to determine its dimensions, deduced the following consequences: that the mean density of the hill was about equal to common freestone, and that the mean density of the whole Earth, was to that of the hill, as 9 to 5 nearly. Common freestone has a specific gravity of $2\frac{1}{2}$, and consequently, that of the whole Earth is $4\frac{1}{2}$, that of water being 1.

The deductions made by Dr. Hutton, from the observations of Maskeline, were subsequently modified by a more strict survey of Shehallien by Professor Playfair. The latter philosopher found that it was composed of granular quartz, the average density of which was 2.64, and of Mica-slate, the average density of which was 2.81 and that the density of a homogeneous mass, which would have produced such an effect on the plumb line would be 2.716.

With great labour Playfair made the mean density of the Earth 4.897, or nearly 5 times heavier than would be an equal volume of water.

Precious to the calculations of Playfair, Mr. Cavendish, by a series of very ingenious experiments on the eventual attractions of leaden balls, found the mean density of the Earth to be 5.18, that of water being 1. Dr. Hutton, by assuming the weight of common freestone as the comparative scale to estimate that of Shehallien, made the mean density of that mountain too low; as was proven by Professor Playfair. It is certainly rational to conclude that if the latter observer could have penetrated to the central base of Shehallien, he would have found its mean density greater than that of either granular quartz or mica-slate. I have inserted the small subjoined table of specific gravity, in order to enable the reader to make his comparisons, without the trouble of reference to other treatises.

This table might be indefinitely extended, but as it contains the most common fossil and mineral substances, it is sufficiently copious for the purpose. If the results produced by Maske-line, Hutton, Cavendish, and Playfair; are correctly founded on the laws of gravity, the Earth is very nearly equal in specific gravity to iron ore, and greatly exceeds that of all the common substances which compose its outer crust. These facts render it impossible that any great cavities towards the centre can exist; and prove that the Earth must be a solid and heavy sphere, unless the inner parts of the shell is composed of substances greatly exceeding in density the heaviest metals. The far greater part of matter composing the Earth's surface is water, or other substances about 2½ fold heavier, than that fluid; consequently, the central parts must have a mean density of 7 or 8, or above that of most of the heaviest metallic ores. It has been suggested that in all probability, the Earth was in reality, an immense magnet, and composed of condensed iron ore.

Before closing this article, I cannot avoid inserting some observations on the diminution of ocean water. It has been shown under the head of Baltic, that the waters of that sea were diminishing at the rate of 3 feet 10 inches in a century. In the article Caspian, the depression of the waters of that sea, is also given from actual measurement.

An actual and general depression of the oceanic level is one of those natural revolutions which we are reluctant to admit into history, from the appalling effects. Our assent to truth, must, nevertheless be ultimately rendered however it may affect our opinions, or interest. The evidence to support a depression of the briny ocean, is abundantly supplied in a very wide scale, and in no other section of the Earth, is this evidence more striking than in America. Long before I ever read any account of a diminution of surface in the Baltic, Mediterranean, or any other sea, the idea of such a revolution was suggested to my mind, by a review of the banks of the Mississippi. In the delta of that river, a recent alluvion forms the entire mass of land. In many places the surface of such alluvion is above the highest floods, from either the river, or the the Gulf of Mexico. My attention was no sooner arrested by the phenomena, along the Mississippi, than it became an object of inquiry, which I have prosecuted as time and opportunity afforded means. Examining in succession the banks of the St. Lawrence, Hudson, Delaware; the numerous islets of Chesapeake Bay, and the Atlantic shores,

similar phenomena, every where, led me to make like conclusions as I had done on the Mississippi; that the surface of the Atlantic Ocean was slowly sinking. The writings of Pallas, Clarke, and many others, strengthened these conclusions: finally, the established depression of the Caspian and Baltic seas; afforded demonstrative evidence of the correctness of the theory.

Two causes have contributed to prevent the discovery of oceanic diminution sooner. First, ancient sea vessels were small, and demanded but little depth of water; secondly, in modern times, since vessels were made with great draught, while harbours remain sufficiently deep to receive them safely, slight diminution of depth is overlooked. I am convinced that in many instances alluvion has been adduced to account for obstructions in rivers and harbours, which in part at least, arose from a depression of oceanic surface. Whatever may be the case in the Indian and Pacific basins, we have less data to determine; but in the basin of the Atlantic, a slow depression of level cannot be longer safely denied.

The Atlantic basin, is terminated on the E. by the sources of the rivers which flow into the Baltic, Black, and Mediterranean seas, and by the central mountains of Africa. On the W. this basin is limited by the Andes in S. America, and by the chain of Anahuac or Chipewayan in N. America. An immense embranchment of the Atlantic penetrates the eastern continent through 50° of lon., between Europe and Africa and Asia. This great arm of the Atlantic on its eastern side, has a counterpart on the W. between N. and S. America. The Baltic on the NE. is again opposed on the NW. by the much more considerable gulfs of Hudson's and Baffin's bays.

On the side of Europe and Asia, it is evident, almost to demonstration that the separation of the Caspian from the Euxine, and the Baltic from the White sea, is in both instances comparatively modern. The two great alluvial slopes stretching from the Maese to the Petchora on the SE., and from the Naeze of Norway, to the outlet of the White sea, on the NW. of the Baltic, are in part formed by the spoils of the adjacent continents, and in part abandoned by the retiring sea.

On the side of N. America, the oceanic depression has evidently broke the ancient connexion between the Sea of Canada, and the Mexican Gulf. The entire line of coast from St. Lawrence to the Platte river, presents one vast inflected line of shore, bearing marks of submersion. Of that part of the American coast from the harbour of N. York to the Gulf of Darien inland, memoria consisting of the remains of existing animals, every where present themselves, to attest that time was, when the surface of the ocean stood many hundred feet above its present level. I may be permitted to notice, that the revolution I am descending upon, is totally different, and more recent, than that by which imbedded rocks were formed, containing organic remains. The latter is entirely beyond our historical records, whilst the former comes within our authentic scope of observation, and is yet in progress.

It is peculiarly interesting to scan the effects which an elevation of 600 feet would have on the Atlantic basin. Such a change of level would again unite the Mediterranean to the Caspian and Baltic; the Baltic with the White sea; and insulate central Europe, and the Scandinavian peninsula. The Indian and Atlantic would again mingle, and the Nile debouch, in what is now Upper Egypt.

On the American side the Alleghany or Appalachian system of mountains would rise as the higher ridge of an immense island; as would the more elevated parts of the northeastern states, of another. The lower part of the Mississippi basin, would become a lengthened inland sea, from which the valleys of the Hudson, and St. Lawrence would be straits opening into the Atlantic Ocean. The protracted alluvial slopes I have noticed would be again submerged, and a very large portion of the most populous and fertile tracts of both continents buried under the ocean waves. We are startled at the mere mention of so tremendous a change on the habitable earth; and yet, careful inquiry would leave upon any sane mind, scarce a doubt, but that such was once the state of nature on this planet.

Easton, borough, pstv. and seat of justice, Northampton cty. Penn., on the Delaware, 60 ms. N. from Philadelphia. It is a borough town, situated on a point of land formed by the Delaware and Lehigh rivers and Bushkill creek. The streets are laid out at right angles to each other, and along the cardinal points. The lower part of the town, near the Delaware, is on an elevated level, but the western extremity rises by a gradual ascendency to a considerable elevation. The adjacent country is bold, broken, and romantic. The soil is highly productive, and being well cultivated, gives a most pleasing aspect to the vicinity of Easton. Farm houses, orchards, fields, and meadows, are commingled along the bottoms of the rivers and slopes of the adjacent hills. Bushkill creek is amongst the finest mill streams in the U. S. See *Bushkill*. This stream rises 8 ms. N. from Nazareth, and has an almost uninterrupted fall to the Delaware. Within the borough of Easton it passes the Chesnut ridge, and by a very winding and precipitous course reaches the Delaware, affording a rapid succession of mill seats.

The following valuable information respecting this interesting place, was communicated to the editor by an intelligent young gentleman, a native of that town. There are within the boundaries of the borough 3 oil mills, 6 grist mills, 2 saw mills, 2 distilleries, 3 tan yards and tanneries, 1 brewery, and 31 dry goods and hardware stores. A library formed in 1811, containing about 1200 volumes. An academy called the Union Academy, in which the learned languages are taught. Three places of public worship, 1 for Presbyterians, 1 for Episcopalians, and 1 for German Lutherans. A court house, erected in 1758. Four fine bridges; 1 over the Delaware, a most substantial structure, erected at an expense of 30,000 dollars; one a chain bridge, over the Lehigh, on the Philadelphia road, and 2 over the Bushkill. Two banks, one a branch of that of Pennsylvania, and the other the Easton bank, with a capital of 400,000 dollars. The trade of this town is very considerable, particularly in the article of flour, which constitutes the principal staple of Northampton cty. Pop. 1820, 1873, 2679.

Easton, pstv. and capital of Talbot cty. Md., on the left bank of Trenchhaven creek, 12 ms. above Choptank bay, 20 ms. SE. from Baltimore. It is the most considerable town of the eastern shore part of Md. Pop. near 2000.

They are situated, 88 W. from the middle of Plymouth Sound, at the distance of 14 ms. They are almost in the line which joins the Start and the Pizard Points, and their situation with regard to the Bay of Biscay and the Atlantic is such, that they lie open to the swells of the bay and ocean from all the SW. points, so that all the heavy seas from the SW. break upon Eddystone with the utmost fury. Three light houses have been erected on these dangerous rocks; the first by Mr. Winstanly, 1696 which on the 27th November, 1703, was destroyed by a storm, and with it perished the ingenious founder. The second was built of wood by Mr. Rudyard, but was burnt in 1755. The third and the one yet in existence, was constructed in stone by Mr. Smeaton, and finished August 24th, 1759. Edikofen, town of Germany, in the palatinate of the Rhine.

—*Edinburg*, metropolis of Scotland, situated in a city of the same name. It may properly be divided into the Old and New towns. The Old Town is situated on a narrow steep hill, about a mile in length, terminated abruptly on the W. side by the castle, from which there is a gradual declivity to the palace of Holyrood-house, which is placed in a beautiful plain called St. Ann's Yards. From the level of this plain, and on each side of the ridge or hill on which the Old Town stands, run two narrow valleys, nearly parallel to each other; the southern one forms a street called the Cowgate, the northern continued a marsh till very lately, which was called the North Loch, but is now drained. The high street, which runs between the castle and Holyrood-house, is long and spacious, and the houses are very high. From this street many narrow lanes or closes run off at right angles, towards the N. and S. The castle is seated on a vast perpendicular rock, accessible only by a drawbridge on one side, and in ancient times was considered as almost impregnable. In 1811 the number of inhabitants, exclusive of Leith, was 103,000. It is supplied with water conveyed in iron pipes, from Comiston, 4 ms. to the W. It is governed by a lord provost, a dean of guild, a guild council, and 25 common council. Here are 14 incorporated trades, each having its deacon or warden. Edinburgh is 2 ms. SSW. of Leith (which is its port) and 377 N. by W. from London. Lon. $3^{\circ} 12'$ W. lat. $55^{\circ} 58'$ N.

This city has become deservedly celebrated for the number, extent, and excellence of its literary institutions. The University of Edinburgh was founded in 1582, and now embraces professorships on almost every important pursuit of the human intellect. The number of students ordinarily exceeds 2,000. To the university is attached a library containing above 50,000 volumes. As a medical school, the reputation of this university occupies a most exalted rank. The other literary, charitable, religious and legal institutions are numerous and highly respectable. Of all the great cities of the British empire, Edinburgh is supposed to derive the least comparative employment from trade, commerce or manufactures.

Edinburghshire, or *Mid Lothian*, co. of St. L., 27 ms. long and from 6 to 16 broad, bounded on the N. by the Frith of Forth, E. by the shires of Haddington, Berwick, and Roxburgh, S. by those of Selkirk, Peebles and Lanark, and W. by Linlithgowshire. It is divided into 31 parishes. The soil is fertile and produces corn

of all sorts, with plenty of grass; also, coal, iron, limestone, and black marble. The principal rivers are the Esk, Leith, Amond, and Gala. Pop. in 1801, 122,954, in 1811, 148,607, and in 1821, 191,514.

Egypt, country of Africa, 600 ms. in length, and 250 where broadest; bounded on the N. by the Mediterranean, on the S. by Nubia, on the E. by the Red Sea and the isthmus of Suez, and on the W. by the deserts to the E. of Fezzan. The broadest part is from Alexandria to Damietta, and thence it gradually grows narrower, till it approaches Nubia. It is divided into Upper, Middle and Lower, which last comprehends the Delta; and though the air is naturally hot, and not very wholesome, it enjoys many other advantages, that it has been always extremely populous. Egypt carried on a considerable trade in East India commodities, till the Portuguese found the way round the Cape of Good Hope. However the merchants of Europe visit the harbours of the Mediterranean, and import and export several sorts of merchandise, and from other parts, the elephants teeth, ebony, gold, civet, ambergris, and coffee. The

and Morocco, and thence to Cairo, over immense deserts. The principal commodities which the merchants purchase are coffee, senna, cassia, rhubarb, sal ammoniac, myrrh, saffron, saltpetre, aloes, opium, indigo, sugar, sandal wood, dates, cotton, cloth, &c. The complexion of the Egyptians is tawny, and the further S. the darker, so that those near Nubia are almost black. They are generally indolent and cowardly; the richer sort do nothing all day but drink coffee, smoke tobacco and sleep; and they are ignorant, proud, haughty, and ridiculously vain. From March to November, the heat to an European, is almost insupportable; but the other months are more temperate. The S. winds are by the natives called poisonous winds, or the hot winds of the deserts; they are of such extreme heat, and aridity, that no animated body exposed to it can withstand its fatal influence. During the 3 days that it generally lasts, the streets are deserted, and no to the traveller whom this wind surprises remote from shelter. It rains very seldom in Egypt; but that want is fully supplied by the annual inundation of the Nile. When the waters retire, all the ground is covered with mud; then they only harrow their corn into it, and in the following March, they have usually a plentiful harvest; their rice fields are supplied with water from canals and reservoirs. There is no place in the world better furnished with corn, flesh, fish, sugar, fruits and all sorts of garden stuff; and in Lower Egypt, are oranges, lemons, figs, dates, almonds, cassia, and plantains, in great plenty. The sands are so subtle that they penetrate into the closets, chests, and cabinets which, with the hot winds, are probably the cause of sore eyes being so very common here. The animals of Egypt are tigers, hyenas, antelopes, apes, black cattle, fine horses, large asses, crocodiles, the hippopotamus, the camelion, and a kind of rat called ichneumon, ostriches, eagles, hawks, pelicans, water fowls of all kinds, and the ibis which resembles a duck, and was deified by the ancient Egyptians, on account of its destroying serpents and noxious insects. Here is a serpent called the cerastes, or burned viper, whose bite is fatal to those who have not the secret of guarding against it; for some of the natives can play with the cerastes, and it will not attempt to bite them, but when applied to a lion, or any other animal, it has instantly bit and killed them. The pyramids of Egypt, are noticed by all travellers; the largest takes up ten acres of ground, and is, as well as the rest, built upon a rock. Here are also caverns, out of which they get the mummies, or embalmed dead bodies, which are found in coffins, set upright in niches of the walls, and have continued there at least 4000 years; many of these have been brought to England, and were formerly deemed of great use in medicine. The principal city is Cairo. Egypt has been compared to the trunk of a tree, with its roots, dead and decayed. The Delta spreads out like the roots of a tree, and the country receding southward, similar to the withered trunk, narrowing to about 10 ms. extends beyond the tropic of cancer. Cape Bourlos on the Mediterranean is about N. lat. 32° ; consequently Egypt stretches through

upwards of 20° of lat. It is puerile to give to such a country a particular climate; the more so, as its extension is almost exactly N. and S. It was the country of early science, and the country perhaps of all others, of the most fatal revolutions, and of human degradation.

Ehrenbreitstein, very ancient castle, in the electorate of Treves, on the E. bank of the Rhine, opposite Coblenz. It is seated on the summit of a stupendous rock, not less than 800 feet above the level of the river, and is thought, when supported by a competent garrison, to be impregnable. It has a communication with Coblenz, by subterraneous passages, cut out of the solid rock; and is plentifully supplied with water from a well 280 feet deep. The prospect from this castle is majestic, extensive, and variegated; and the stream at its foot is decorated with 2 small islands, on each of which is a convent. In the vale of Ehrenbreitstein, is the old palace of the elector.

Elba, island on the coast of Tuscany, remarkable for mines of iron and loadstone, and quarries of marble.

Elba, island in the Mediterranean Sea, between Italy and the island of Corsica, and separated from Tuscany by the channel of Piombino. It was known to the Greeks by the name of Ethalia, and to the Romans by that of Iva. The form of the island is very irregular, the length from E. to W. is about 14 ms., and the greatest breadth, which is at the W. end, is between 8 and 9 ms., and contains a population of 13,700 souls. The whole island presents numerous mountains, separated by deep valleys, and some plains of considerable extent; the south-west part is the most elevated, and is composed of black and white granite, susceptible of a fine polish. Elba has been re-

nowned for its mines of iron and loadstone, for a period beyond the reach of history. Aristotle speaks of them as opened from time immemorial; it has also quarries of fine marble. On the NE. part, is the mountain, of mine, of iron ore, which supplies most of the forges of Italy. The tower of Voltorajo stands on this mountain, on a shaggy rock. The view from this tower is wonderfully fine every way, as the eye overlooks the whole island, that of Corsica, many scattered islets, the channel of Piombino, and a great range of continent. On the E. side of the mountain, stands Rio, a village inhabited by miners. Under it breaks out the only rivulet in Elba, which does not run above a mile before it falls into the sea; but the water gushes out of the rock in such abundance, that it turns 17 mills in that short course. The soil of Elba is very narrow, with scanty room for cultivation, and few places level enough for corn, producing little more than 6 months provisions for its inhabitants; but the island is so situated, that it can, in spite of a blockading fleet, be always supplied with provisions, and the garrison with reinforcements. The wine is good, if made with care and properly kept; the fruit of its standard trees is excellent, though not in great plenty; orange and lemon trees thrive very well in the sheltered valleys and narrow plains near the sea. There are several springs of excellent water in the island; and the climate is much milder than the adjacent continent, for it produces many fruits and plants that cannot stand the Tuscan winters. Among the animals and birds, are wild boars, hedgehogs, partridges, quails, canary-birds, nightingales, ortolans, &c. It has no rivers; but there are a number of rivulets. This island was held, with Piombino, by the Appiani, as a fief of the empire, till Charles V. thought proper to transfer it to Cosmo I. duke of Florence, that he might rescue it and the adjacent coasts from the Turks and French. Before the French revolution, it was subject to the prince of Piombino, except Porto Ferrajo, and Porto Longone, the former belonging to the duke of Tuscany, and the latter to the king of Naples; but in 18-11, the French became possessed of the whole island. In consequence of the late political events in Europe, this island has attracted a considerable degree of interest, on account of Napoleon Buonaparte, emperor of the French, having chosen it for his future residence. By the treaty concluded with him in April, 1814, which was guaranteed by all the powers of Europe, the full sovereignty of the island is vested in him, as his sole property, during the remainder of his life; and to him a separate principality. On the 4th of May following, he landed with his suite at Porto Ferrajo, the capital of the island, which he left on the 20th of February, 1815, on his last expedition into France. Elba, pst. Genesee cty. N. Y. Pop. 1820, 13.

Elbasano, town of Albania, 45 ms. SE. of Durazzo. Lon. 20° 9' E. lat. 41° 54' N.

Elbe, large river of Germany, which rises in the mountain of the Giants, on the confines of Bohemia and Silesia; flows to Konigsgratz, Leutzmeritz, Dresden, Dessau, Meissen, Wit-

temberg, Magdeburg, Hamburg, and Gluckstadt, and enters the German Ocean, at Cruxhaven. It is navigable for large ships to Hamburg, which is 70 ms. from the sea.

The Elbe is navigable partially as high as its junction with the Muldan, between Welwarn and Melnick, 30 ms. above Leutmeritz in Bohemia. At Leutmeritz it carries small boats; at Pirna above Dresden, it admits river barges. From Pirna to Hamburg, it has an uninterrupted navigation of upwards of 300 ms. The Elbe rises in Bohemia, which it drains. The valley of Bohemia, is one of those remarkable mountain basins, of which the earth affords several, though no other perhaps so distinctly defined as that of the upper Elbe. The main source of this fine basin is the Muldan, rising in the Bohemia Wald, within less than 20 ms. from the Danube, below the mouth of the Inn. Flowing first NE. along the mountains 50 ms. to Rosenberg, the Muldan turns to nearly N., which course it continues with a slight inclination to the E. 100 ms., receives the Beraun, from the SW. continuing N., passes Prague and 50 ms. below the mouth of the Beraun joins the Elbe at Melnick. The Beraun rises also from the Bohemian Wald, and flowing NE. about 100 ms., falls into the Muldan above Prague. The Elbe proper, a far inferior stream to the Muldan, has its sources in the Carpathian mountains, between Bohemia, and Moravia and Silisia; flows NW. 100 ms. to its junction with the Muldan. The Egre, or Eger, a longer, though perhaps less stream than either the Elbe or Beraun, rises in the extreme W. angle of Bohemia, interlocking sources with the Nab, the Maja and Meiss, and after a comparative course of NE. by E. upwards of 150 ms. falls into the Elbe at Leutmeritz.

Elephanta, island on the W. coast of the Deccan of Hindoostan, 5 ms. from the castle of Bombay. It contains one of the most inexplicable antiquities in the world. It is about 5 ms. in compass, and consists of almost all hill, at the foot of which as you land you see the figure of an elephant, of the natural size, cut coarsely in stone. An easy slope then leads to the portal of a magnificent temple, hewn out of the solid rock. It is an oblong square, 80 feet long, and 40 broad. The roof, which is about 10 feet high, is cut flat, and is supported by regular rows of pillars, with capitals resembling large cushions, as if pressed by the incumbent mountain. At the further end are three gigantic figures, which were mutilated by the absurd zeal of the Portuguese, when this island was in their possession. Elephanta was ceded to the English by the Mahrattas.

Engadina, country of the Grisons, in the mountains of the Alps. It is divided into Upper and Lower, extending along the banks of the river Inn, from its source to the Tirolese. Upper Engadina is a beautiful valley; yet on account of its elevation, produces nothing but rye and barley. The winter sets in early, and even in summer, the air is cold and piercing, and the corn occasionally much damaged by the hard-frost.

Engelberg, town of Switzerland, 10 ms. long, entirely surrounded by very lofty and barren mountains, and bounded by the cantons of Bern, Uri, and Unterwalden. It was formerly subject to the abbot of a Benedictine monastery of the same name, who was under the protection of the cantons of Lucern, Uri, Schwitz, and Unterwalden. The romantic scenery of this country has always delighted the ravelles, and engaged the attention of the naturalist. Glaciers, of a very great extent and extremely diversified, are found on the side of very fertile mountains. And exhibit singular points of view. There is abundance of fine black marble, white veined; a vitriolic earth, slate impregnated with vitriol; small crystals, called Swiss diamonds; silver, and vitriol. The abbey is 12 ms. SW. of Altdorf. See *Tilsberg*.

Engers, town of Germany, in the electorate of Treves, capital of a country of the same name. It is seated on the Rhine, 11 ms. N. of Coblenz. Lon. $7^{\circ} 32'$ E. lat. $50^{\circ} 35'$ N.

Engia, ancient Saronic gulf of Greece, between Livadia and the Morea. In ancient times it separated Attica and Megara from Argolis.

England, the southern part of the island of Great Britain, is bounded on the E. by the German Ocean, on the S. by the English Channel, on the W. by St. George's channel, the principality of Wales, and the Irish sea, on the N. by the Cheviot hills, and by the river Tweed. Its extent is computed at 58,335 sqms., and the pop. in 1811 amounted to 9,499,400. Its external surface somewhat resembles the form of a triangle, and from the South Foreland in Kent, which may be termed the E. point of the triangle to Berwick upon Tweed, which is the N. point, its length is 345 ms. From that point to the Land's end in Cornwall, which is the W. it is 438 ms., and the breadth thence to the South Foreland is 340. The face of the country affords all that beautiful variety which can be found in the most extensive tracts of the globe; not, however, without romantic and even dreary spots. Lofty mountains, craggy rocks, bleak barren moors, and wide uncultivated heaths; and yet, few

countries have a smaller proportion of land absolutely sterile and incapable of culture. The richest parts are, in general, the midland and southern. Towards the N. it partakes of the barrenness of the neighbouring Scotland. The E. coast is in many parts, sandy and marshy. A range of rude and elevated land, sometimes rising into lofty mountains, extends from the borders of Stld. to the very heart of Eng., forming a natural division between the E. and W. sides of the kingdom. Cornwall is also a rough hilly tract, and a similar character prevails in part of the adjacent counties. These mountainous tracts abound with various mineral treasures. The rivers are numerous, and the most considerable of them are the Thames, Severn, Humber, Mersey, Medway, Trent, Ouse, Tyne, Uss, Eden, Aron, and Dee. The Lakes are neither numerous nor extensive, and are chiefly in the NW. counties, those of Westmoreland and Cumberland, in particular, exhibit such varieties of beautiful scenery, as to become the object of summer excursions from every part of the country. With respect to climate, England is situated in the N. part of the temperate zone, so that it enjoys but a scanty share of the genial influence of the sun. Its atmosphere is inclined to chillness and moisture, subject to frequent and sudden changes, and is more favourable to the growth, than to the ripening of the products of the earth. No country is clothed with a more beautiful and lasting verdure, but the harvests, especially in the northern parts, frequently suffer from unseasonable rains. The rigours of winter, however, and the heats of summer, are felt here in a much less degree than in parallel climates on the continent, a circumstance common to all islands. The whole country, some particular spots excepted, is sufficiently healthy, and the longevity of its inhabitants is equal to that of almost any region. All its most valuable productions, both animal and vegetable, have been imported from foreign countries, and have been kept up and improved by constant attention. England has now no other wild quadrupeds than some of the smaller kinds; as the fox, badger, marten, otter, hare, rabbit, squirrel, &c. On the other hand, every kind of domestic animal, imported from abroad, has been reared to the greatest degree of perfection. The horse has been trained up for all the various purposes of strength and swiftness, so as to excel in those qualities the same animal in every other country. The horned cattle have been brought to the largest size and greatest justness of shape. The different races of sheep are variously distinguished, either for uncommon size, goodness of flesh, and plenty or fineness of wool. The deer of its parks, which are originally a foreign breed, are superior in beauty of skin and delicacy of flesh, to those of most countries. Even the several kinds of dogs have been trained to degrees of courage, strength and sagacity, rarely to be met with elsewhere. The improvement in the vegetable products of this island is not less striking than in the animal. Now, according to a few wild berries, were almost all the variety of vegetable food which its woods could boast.

it is indented for corn, esculent roots, and plants, and all its garden fruits. The rivers and seas of Eng. are stocked with a great variety of fish, which yield a plentiful article of provision to all ranks of people. The manufactures and commerce of this country are vast, extensive, and various; in the woollen, linen, cotton, and hardware manufactures in particular, it has long maintained a preeminence; nor must the recent one of elegant earthenware be omitted; and though nature has denied it the rich fruits of other countries, yet the manufacture, if it may be so called, of home-made wines, in imitation of the foreign, has been brought to an uncommon degree of perfection. The English manufactures have been lately estimated at the annual value of 63,000,000*l*; and are supposed to employ 1,585,000 people; of which sum the woollen manufacture is stated to produce about 15,000,000*l*; the leather 10,000,000*l*; the iron, tin, and lead, 10,000,000*l*; and the cotton 9,000,000*l*. The government of Eng. is a limited monarchy, the legislative power residing in the king, lords, and commons; and the executive in the king, the great officers of state, the judges, and the inferior gradations of magistracy. The army, during the late war, was supposed to exceed 170,000, with 50,000 fencibles, and 80,000 militia. But the great rampart, and supreme glory of Eng. consists in her navy, which in size, strength, and number of ships, far exceeds any thing on record in the history of the world. This, indeed must be apparent to every one who examines the list of ships and vessels into which the British naval force is divided, according to one of which, at the conclusion of the war, there were 256 ships of the line, 39 of from 40 to 50 guns, 257 frigates, 16 fire-ships, 219 brigs, 33 cutters, 103 schooners or luggers, making a total of 1113 ships and vessels of war, exclusive of the hired armed vessels, which are chiefly employed in protecting the coasting trade. From this immense fleet, the number of seamen amounts to 120,000, a number which no other country, ancient or modern, could have supplied. The civil division of the country is into 6 circuits, and 40 cties.; these last are subdivided into wapentakes or hundreds, and parishes. In each of the circuits, for the most part, two of the judges administer justice twice a year. They are, 1. The Home Circuit, which contains the counties of Hertford, Essex, Kent, Surrey, and Sussex. 2. The Norfolk, containing Huntingdon, Bedford, Huntingdon, Cambridge, Suffolk, and Norfolk. 3. The Oxford, containing Oxford, Berks, Gloucester, Worcester, Monmouth, Hereford, Salop, and Stafford. 4. The Midland, containing Warwick, Leicester, Derby, Nottingham, Lincoln, Rutland, and Northampton. 5. The Northern, containing York, Durham, Northumberland, Lancaster, Westmoreland, and Cumberland. 6. The Western, containing Hants, Wilts, Dorset, Somerset, Devon, and Cornwall. Two other counties, Middlesex, and Chester, are not included in any circuit. The established religion, as contained in the Articles of the Church of England, is Christianity; but these articles are interpreted, by the clergy in general, according to the more liberal

are tolerated. The ecclesiastical division of England is into two archbishoprics, called the provinces of Canterbury and York. That of Canterbury contains the diocese of London, Winchester, Bath and Wells, Bristol, Chichester, Ely, Exeter, Gloucester, Hereford, Litchfield and Coventry, Liffcoln, Norwich, Oxford, Peterborough, Rochester, Salisbury, and Worcester, beside the four Welsh bishoprics of St. David, Bangor, Landaff and St. Asaph. The province of York contains the dioceses of Durham, Chester, and Carlisle, and that of Sodor and Man. Every prelate of the sees enumerated, that of Sodor and Man excepted, has a seat in the house of lords. London is the capital, and the metropolis also of the whole British empire. For the pop. and other remarkable objects in the topography of England, see the respective counties, and for a general view, see *Great Britain*.

Erfurt, town of Germany, capital of Upper Thuringia, with a university. It was formerly imperial, but is now subject to the elector of Mentz, and is defended by two strong forts. It is seated on the river Gera, 30 ms. ESE. of Muhlhausen. Lon. 11° 23' E. lat. 51° N.

Eribol Loch, Eng. arm of the sea, on the N. coast of Sutherlandshire, capable of affording a safe retreat to the largest vessels. It receives several streams, particularly that which flows from a lake called Loch Hope.

Ericht Loch, or *Lake of Eril*, in Perthshire, which extends several ms. into the mountains. The waters of this lake descend into another, called Erich-stanach.

Erie, large lake of the U. S. and U. C., extending in form of an oval, SW. by W. and NE. by N. 280 ms. in length. It is about 65 ms. wide where broadest. Extreme N. part at N. lat. 43°, extreme S. part N. lat. 41° 30', and reaching from 1° E. to 6° W. lon. W. C. The area of this lake is about 12,000 sqms. When compared to any of the other four great Canadian lakes, lake Erie is shallow, seldom exceeding 40 or 50 fathoms. Its shores are in some places low and sandy, and in others rock bound. The mouths of its rivers, Detroit and Niagara excepted, are shallow, and not very favourable to commerce. Its position however, and the fertility and extent of the adjacent regions, superinduces a very extensive trade on this great inland sea. It receives from the NW., by the Detroit, the immense volume discharged from the Superior, Huron, and Michigan. From the peninsula of U. C., the Ouse flows into Erie from the NW., from the peninsula of Michigan, it receives the Huron and Raisin rivers; from Ohio, Penn., and N. Y., Maumee, Portage, Sandusky, Huron, Vermilion, Black, Cuyahoga, Grand, Ashtabula, Conneaut, Cuyahoga, and Buffalo rivers. The U. S. possess at present, it is probable, more than 3000 tons of shipping on this lake. Independent of Detroit and Niagara, Erie has, at seasons of high water, a natural communication with Illinois river. The great western canal of N. Y., will unite it with the Atlantic ocean, through the Hudson, as will that by Cuyahoga and Muskingum river with the Ohio. The whole forming an unequalled interior chain of commercial connexion.

Erie Fort, strong fortification in the tp. of Bertie, U. C.; situated on the N. shore of Lake Erie, and on the W. bank of the Niagara river, 27 ms. S. by E. of Niagara fort, and 18 above the carrying place at the falls of Niagara. It has a barrack for troops and a block house; a company of soldiers is quartered here, for the purpose of transporting the public stores. Lake Erie narrows here into the strait, which carries the waters over the great falls of Niagara; there is a good harbour here for vessels of any size. Fort Erie frequently suffered from the western gales, which occasion the lakes sometimes to rise very considerably. The new fort is projected on a small height, in the rear of the present garrison. N. lat. 42° 53' W., lon. 79° from London. W. C. 2° W.

Erie, city, N. Y., bounded by Cattaraugus city, S., by Chautauque city, SW., by Lake Erie and Niagara river W., by Tonawanda river, Niagara city, N., and by Genesee city, E.; length 38 ms., mean width 25 ms., area 950 sqms. Surface partly hilly in the eastern and south eastern part; but level towards Lake Erie and Niagara river. The soil generally productive in grain, fruits and pasturage. Erie, pst., borough and seat of justice, Erie city, Penn. It is the Presque Isle of the French, but stands on the main land, opposite the peninsula, from which its name is derived. The best part of the village extends in one street from the harbour, on the road towards Pittsburg. The harbour is formed by the main shore, peninsula and a reef of sand. Over the latter, without an extraordinary swell of the lake there is only 8 feet of water, the depth and anchorage within are commodious and safe. The trade of this town is considerable and increasing. A turnpike road extends from there to Pittsburg, distant from each other 136 ms. It is 80 ms. SW. from Buffalo. It has a number of neat dwelling houses, several stores, a court house, and printing office. Pop. 1820, 635.

Euphrates, one of the most celebrated rivers in the world, and the principal stream of Turkey in Asia. The principal source of this great river, is the Murad, which rises in Upper Armenia, at lon. 44° E., and lat. 39° N., flowing from the mountain Ala-Dag, the ancient Abus, of which Ararat is a branch. It rises near the town of Bayezid, and flowing W. 250 ms. receives from the N. a much smaller stream, the latter, however, being the one to whom the name of Euphrates, or by the Orientalists Frat, is given. The Frat is formed by a number of small streams to the N. of Erzerum, below which city they unite, and flowing SW. join the Murad at Keban, and form the Euphrates. The river would appear to be destined to enter the Mediterranean, as it passes the first mountain chain by the pass of Nushar, and again through a second mountain pass, forms a double cataract 22 ms. above Semisat. The course thus far SW., is at length turned by the mass of Caucasus, after having reached within less than 100 ms. from the NE. angle of the eastern Mediterranean. Below Semisat, the Euphrates, already 500 ms. from the source of the Murad, turns to S., about 100 ms., where at length nearly due E. from Aleppo, it assumes its final course to the SE. towards the Persian Gulf. Having flowed to the latter direction 700 ms. The Euphrates and Tigris unite, and form the Shat-al-Arab, of the river of Arabia. A short distance below the junction of the Euphrates and Tigris, the Ahwas, another river of considerable magnitude, enters from the Elwend mountains. Now within less than 40 ms. from its recipient, the Persian Gulf, the water of the Shat-al-Arab, divides into three main, and several minor branches. All the mouths are more or less choked with sand bars, that of the S. is the freest, and deepest. The tide flows above Hamourah, or about 40 ms. The entire comparative length of the Euphrates, is between 1500 and 1600 ms. The basin of this river, including the valleys of Tigris and Ahwas, is about 800 ms. in length by 200 ms. in width, with an area of 160,000 sq. ms. lying between lat. 30° and $40^{\circ} 30'$ N. Below its bend to the SE. the Euphrates, generally separates the Arabian deserts from the plains of the ancient Mesopotamia, now known by various names, as the Quth, Irac Arabi, &c. It is a mistake to suppose the deserts are very common, for the deserts are very common by the Euphrates, a desert with all the features and horrors of that of Arabia, extends between the Euphrates and Tigris about N. lat. 35° , and lon. 40° E. Here ponds of bitter water.

Scotland and Ireland, with that of Europe entire.

The seas of Europe are, on the W. and NW. the Atlantic ocean; on the S. the Mediterranean and Black Seas, on the SE. the Caspian, and on the N. the Arctic Ocean. This region is indented by the Gulf of Venice, by the Sea of Azoph, by the Baltic, by the White Sea; and as we consider the British islands as a part of Europe, by the German Ocean. In point of magnitude the lakes of Ladoga, Onega, Wener, Wetter, Enara, Geneva and Constance, follow nearly in order, and are the principal lakes in Europe, if we may not except that intricate maze of lakes between the White sea, and Gulf of Finland. Such are the general features of that section of the earth, where the human mind has risen to the highest dignity, and the human form to perhaps its utmost perfection of strength and symmetry; where arts and science have vied with each other, to soften the manners, enlighten the understanding, and secure the happiness of mankind. See the respective arts for the minor parts.

Europe contains at present the Christian governments of Sweden, Russia, Prussia, Denmark, Great Britain, France, the kingdom of the Netherlands, Spain, Portugal, Sardinia; the two Sicilies, the Pope's dominions; and several minor states in Italy; Austria, Bavaria, Wirtemberg and Saxony, with other minor states of Germany. Mahometan-Europe, embraces all Greece, Epirus, or Albania, Macedonia, Thessaly, Thrace, Bulgaria, Servia, and Bosnia, with part of Croatia, and Herzegowina; or briefly, all the continent, and most of the islands of Europe, SE. from the Save and Danube rivers.

The languages are the Italian, French, Spanish and Portuguese, which are dialects of the Latin; the German, Flemish, Dutch, Swedish, Danish, and English, which proceed from the Teutonic; the Slavonian, which reigns (though in disguise) in Poland, Russia, Bohemia, and a great part of Turkey in Europe; the Celtic; of which there are dialects in Wales, the Highlands of Scotland, Ireland, Bretagne in France, and Lapland; the modern Greek, and several others.

The general religion of Europe is the Christian, subdivided into three great sects, the Roman Catholic S., the Protestant with the exception of Ireland NW., and the Greek church on the SE. and E. The Mahometan, of the sect of Omar, or the Sunnites, is established, though not the most prevalent, religion in the Turkish empire in Europe. Jews are found in most parts of Europe, but are most numerous in Turkey, and the Russian empire. The Pagan religions are not even at this period extinct in Europe; many of the Laplanders, in the extreme N., and the Bashkirs, and some other Tartar tribes of the extreme E., have not adopted either the Christian, or Mahometan religion.

Having an entire outline of 800 ms. Area 54,000 sq. ms. 24,100,000 acres, between lat. 25° and $31^{\circ} N$. Extending through 6° of N. considerable diversity of seasons must be experienced in Florida, but from the uniformity of the general surface, the whole extent exhibits more of those rapid transitions of seasons which can only arise from great diversity of relative elevation. The interior of the country remains but imperfectly known, and however, as correct information has been obtained, the greater part of this large peninsula is composed of a very inferior soil, with exceptions found near and along the streams. The vegetable productions are numerous and important. Amongst the valuable cultivated plants may be enumerated cotton, sugar cane, indigo, tobacco, hemp, corn, rice, the peach, orange, lime and fig trees, &c. &c. &c. and it is ascertained, whether or not the coffee plant can be cultivated in Florida.

Florida was discovered in 1512, by John Ponce de Leon, and named Florida, from having been discovered on Palm Sunday, "Pasqua Florida." The first civilized colony in this country was planted by the French in 1562, under Francis Ribault. The French colony was surprised in 1565, and the colonists murdered by the Spaniards. St. Augustine was soon after founded, and the Spaniards remained undisturbed possessors until 1763, when St. Augustine was taken and plundered by an English squadron under John Davis. Pensacola was founded by Don Andre de la Bieda in 1699. The country was frequently attacked by the French and English, but continued a Spanish province until 1763, when it was ceded to Great Britain. In 1781 it was again receded to Spain. On the 23d February, 1819, by the treaty of Washington, Florida was ceded by Spain to the U. S. This treaty was, on the 24th October, 1820, ratified by the Cortes and king of Spain, and on February 22d, 1821, ratified by the Congress of the U. S. Florida is now a territory of the U. S. under the first grade of territorial government.

Fox river. This fine and very important stream rises to the NW. of Green Bay, interlocking with the sources of Ouisconsin. Both streams in the higher part of their course low nearly L. upwards of 200 ms.; they then approach within 12 ms. of each other, and thence run the Ouisconsin SW., and Fox river NE.

The portage from the Fox to Ouisconsin is one of those singular situations, which the interior of America affords, where nature seems to have made preparation for the operations of human intercourse. The intervening ground is level prairie over which at time of high flood loaded canoes are easily navigated. Fox river flows by a gentle course as far as the narrows, through a range of highlands passing W. of lake Michigan. Below this rocky pass it expands into Winnebago lake, from which it again issues by a course nearly N. to Green Bay, which it enters at Fort Brown. The entire comparative course of Fox river is about 300 miles.

France, country of Europe, bounded on the N. by the English channel and the Austrian Netherlands; on the E. by Germany and the Alps, which separate it from Switzerland, Savoy, and Piedmont; on the S. by the Mediterranean Sea and Spain, from which kingdom it is divided by the Pyrenees; and on the W. by the Atlantic Ocean. From the Pyrenees in the S. to Dunkirk in the N., its extent is 625 ms.; and something more from the most easterly part of Alsace to the most western point of Bretagne, which province it must be observed, extends above 100 ms. further into the ocean than any other part of the country. There is no country of Europe more beautiful, or more agreeable to live in than France; the air in general is pure and wholesome, and the change of seasons is less inconvenient than in almost any other. It is not subject to such severe cold as Germany, nor to the violent heat of Italy and Spain. In the southern parts the winters are indeed sharp, but of short duration. The seasons are more regular than in England. The soil diversified by mountains and plains, is watered by a great number of large and small rivers, which serve at once to fertilize the country, and convey merchandise from one extremity of the nation to the other. The industry of the inhabitants, joined to its natural advantages, render it one of the most fertile countries in Europe. It abounds in corn, legumes, fruit, wines, oil, pasture, hemp, and flax, sufficient for its own inhabitants, and much to spare. Here are mines of iron, lead, and copper; there are likewise some of silver and gold, but the last are not rich enough to defray the expenses of working. The chief productions of France are, wines, as champagne, burgundy, claret, &c.; brandy, vinegar, fruit, such as prunes and mulberries, dried grapes, pears, apples, oranges, and olives; corn, salt, hemp, flax, silk, resin, oil, cork, kid-skins, perfumes, drugs, &c. &c. The manufactures are silks, such as lustring, modes, brocades, velvets, &c.; woollen cloth,

linen, coarse and fine lace, paper, china, of exquisite beauty and fineness, soap, &c. The principal rivers are the Seine, Loire, Rhone, and Garonne; and there are many others, which give name to the departments in the new geographical division of this country. The most considerable mountains are the Alps, Pyrenees, Cevennes, and Vosges. France was an absolute monarchy under her kings, from the time of Clovis to the death of Lewis XVI. in 1793. It was divided into several military governments or provinces; namely, Alsace, Anjou, Artois, Armagnac, Artois, Aunis, Auvergne, Barrois, Basques, Bearns, Berry, Bigorre, Blaisois, Boulonnais, Bourbonnois, Bresse, Bretagne, Burgundy, Cambresis, Champagne, Combrats, Dauphiny, Forez, Foix, Franche Comte, French Flanders, Gascons, Gervaudan, Gironne, French Hainault, Isle of France, Languedoc, Limosin, Lorrain, Lyonnais, Marche, Maine, Marais, Navarre, Nivernais, Normandy, Orleansois, Perche, Perigord, Picardy, Poitou, Provence, Quercy, Rouergue, Roussillon, Saintonge, Sologne, Touraine, Velly, and Vendomois. These varied much from each other in point of extent and importance; and there were others of still inferior consideration. The established religion, the Roman catholic; and the ecclesiastical division of the country into 13 archbishoprics and 113 episcopal sees, exclusive of Albi, Carpentras, Carraillon, and Vannes, which belonged to the pope.

The Roman Catholic religion is established in France; and the ecclesiastical division of the country is into 10 archbishoprics and 50 bishoprics; the protestant religion is also tolerated. As the ancient order of things is now restored, it is necessary to notice the present geographical state of the country. France is divided into 83 departments, nearly equal in extent, instead of the ancient military provinces; and these departments are subdivided into districts, cantons, and municipalities. The names of the departments are Ain, Aisne, Allier, Alps Upper, Alps Lower, Ardèche, Ardennes, Ariège, Aube, Aude, Aveyron, Calvados, Cantal, Charente, Charente Lower, Cher, Corrèze, Côte d'Or, Cotes du Nord, Creuse, Dordogne, Doubs, Drome, Eure, Eure and Loire, Finisterre, Gard, Gironne Upper, Gers, Gironde, Hérault, Indre, Indre and Loire, Isere, Ille and Vilaine, Jura, Landes, Loire and Cher, Loire, Loire Upper, Loire Lower, Loir-et, Lot, Lot and Garonne, Lozère, Mayenne, Mayenne and Loire, Manche, Maine, Maine Upper, Mayenne, Meuse, Morbihan, Moselle, Nord, Nièvre, Oise, Orne, Paris, Puy de Calais, Puy de Dôme, Pyrenees Upper, Pyrenees Lower, Pyrenees Eastern, Rhine Upper, Rhine Lower, Rhone, Rhodé (Mouths of), Saône Upper, Saône and Loire, Sarthe, Vendôme, Seine, Seine Lower, Seine and Marne, Vannes, Vaucluse, Vendôme, Vienne, Vienne Upper, Vosges and Yonne. All the countries which the ambition of the government during the late revolution had annexed to its former territory are restored, except that part which now constitutes the departments of Mont Blanc and Vaucluse. The names of departments, therefore, are now 85, all which appear in this work; and the accounts of the five provinces is still retained

The population of the whole is estimated at 30,000,000.

It is a very remarkable fact, that the population of France has regularly increased since 1789. In that year the inhabitants were 26,300,000; in 1803, 27,700,000; in 1817, upwards of 29,000,000; and at present, 1822, no doubt exceed 30,000,000. The national debt of France considering the efforts made during and subsequent to her revolution, and the heavy contributions of her enemies, is comparatively small. Her annual expenditure is about 150,000,000 of dollars. The revenue is nearly an equal sum, but nominally a fraction higher. The French army has been reduced to 90,000 men; and the navy, though reduced from what it was before the revolution, is yet, no doubt, in efficiency the second in Europe. With all its reverses this nation has gained immensely by the revolution. The crowd of useless nobility and governmental priests diminished; its internal industry revived, active and flourishing. The literary institutions are on a more respectable footing. There now exists in the kingdom, 26 universities; 36 royal colleges; 3070 primary schools; upwards of 40 divinity schools; about 1400 boarding schools; and near 22,500 primary schools. In all these seminaries are educated nearly 800,000 pupils. Without distracting foreign colonies; without paper money, or false credit; and with a mild and limited government, France is now no doubt the most happy and prosperous nation in Europe.

France, *Isle of*, or *Mauritius*, island in the Indian Ocean, 200 leagues E. of Madagascar. It was early discovered by the Portuguese. After them, the Dutch settled on the *Isle*, and gave it the name of Mauritius, in honor of prince Maurice, their stadtholder. But they abandoned it, on their acquisition of the Cape of Good Hope. It then remained uninhabited, till the French landed there in 1735. The island is about 45 leagues in circumference. The climate is healthy; but the soil not very fertile. There are many mountains, which produce the best ebony in the world. The valleys are well watered with rivers, and are made very productive by cultivation, of which indigo is the principal object. The town and harbour are called Port Louis, and are strongly fortified; the town is large, and covers a great deal of ground. But in the hurricane months, the harbour cannot afford shelter for more than eight vessels. Here are large storehouses and every thing necessary for the equipment of fleets. The number of inhabitants on the island exclusive of the military, is 6000 whites, and 12,000 blacks. Lon 57° 28' E. lat 20° 9' S.

France, *port of* Colombia, in Venezuela, near Cape Codera. See *Colonia* in the *Ibérica*. *Francetown*, port and tp. Hillsborough city, N. H., 15 ms. NW. of Amherst, and about 35 W. of Portsmouth. Pop. 1820, 1479.

France, *County*, late province of France, bounded on the E. by Lorrain on the E. by Alsace and Switzerland, on the W. by Burgundy, and on the S. by France. It is 100 ms in length, and 50 in breadth, and abounds in corn, wine, cattle, horses, mines of iron, copper and lead. It was conquered by France in 1074, and ceded to France by the treaty of Nimègue.

1678. It now comprehends the three departments of Doubs, Jura, and Upper Saone.

Friendly Islands, group of islands in the South
Pacific Ocean, so named by Captain Cook, in
1773, on account of the friendship that appeared
to subsist among the inhabitants, and their
courteous behaviour to strangers; a character
reversed by subsequent and more accurate ob-
servation. The general appearance of these

islands convey an idea of the most exuberant fertility the surface, at a distance, seems entirely clothed with trees of various sizes, some of which are very large, particularly the tall cocoa-palm, and a species of fig with narrow pointed leaves. On closer examination they are almost wholly laid out in plantations, in which are some of the richest productions of nature, such as bread-fruit, and cocoa-nut trees, plantains, sugar-cane, and a fruit like a nutmeg.

Ganges, or *Ganja*, town of Persia, in the province of Erivan, 105 ms. S. by E. of Tefflis. Lon. $45^{\circ} 50'$ E. lat. $41^{\circ} 10'$ N.

Ganges, river of Asia in Indostan, called by the Hindoos *Padda*, and Hoora *Gonga*, or "the river." From the latter native term, the corrupted name of Ganges is taken. In almost all our maps, this mighty stream is made to rise to the N., and pierce the Himalah mountains; but Leitch Webb being sent in 1808, to explore its sources, ascertained that all the streams above Hurdwar, which rise and mingle to form the Ganges, rise S. from the snowy mountains. Two main and several minor branches, flow first W., then turn to the S., unite, and piercing a secondary chain of mountains, enter the plains of Hindostan above Hurdwar. The Ganges now assumes a SE. course, which it pursues 400 ms. to its junction with the Jumna, above Chuprah. Below the mouth of the Jumna, the Ganges flows E. 200 ms. to where it again receives a large tributary stream, the Gogra, from the NW. The general course of the Ganges, below its confluence with the Gogra, is SSE. 500 ms. to the Bay of Bengal. About 40 ms. above its efflux into the Bay of Bengal, the Ganges is joined by the vast volume of the Brahmapootra, or Burampooter. The entire comparative length of the Ganges, is about 1700 ms.; that of the Brahmapootra is not much less. The united basin of these two great rivers, is about 1700 ms. in length, from NW. to SE., and with a mean width of 300 ms. comprises an area of 600,000 sqms. The Ganges though in many places fordable above its junction with the Jumna, is every where, at all seasons, navigable below Hurdwar. At so great a distance as 500 ms. from the sea, the river is 30 feet deep, in the lowest state of its water. This depth it maintains, to the sandbars near its mouth. There is a very strong resemblance between the manner and seasons of floods in the Ganges, and Mississippi. In the delta of both, the annual overflow, has reached its height about the first of July. Of the two, the Ganges is a little later, and rises and falls rather more slowly, and more regularly, than does the Mississippi. In both, the perpendicular height of the inundation decreases, advancing towards their respective recipients. The basin of the Ganges lies between N. lat. 22° and 35° , and within less than one degree, its mouth and that of the Mississippi are separated 180° of longitude. See *Burampooter*, *Jumna*, *Gogra*, &c.

In the annual inundation of this immense river, the country comprised in its delta, is overflowed to the extent of more than 100 miles width; nothing appearing but villages and trees, excepting very rarely, the top of an elevated, the artificial mound of some deserted village,

appearing like an island. The rise of the water, is, on an average, 31 feet. In a word, it is, in every respect, one of the most beneficial rivers in the world, diffusing plenty immediately by means of its living productions, and secondarily by enriching the lands, affording an easy conveyance for the productions of its borders, and giving employment to many thousand boatmen.

Georgia, country of Asia, called by the Persians, *Guristan*, or more correctly *Koordistan*, and by the Turks *Gurshi*. It is one of the 7 Caucasian nations, in the countries between the Black sea and the Caspian, and comprehends the ancient Iberia and Colchis. It is bounded on the N. by Circassia, E. by Daghestan and Schirvan, S. by Armenia, and W. by Cuban, or the new Russian government of Caucasus. It is divided into 9 provinces. Of these, 5 form what is commonly called the kingdom of Georgia; and 4 the kingdom or principality of Imeritia. The last reigning prince ceded this country to Russia on his death, which happened in 1800. The hills of Georgia are covered with forests of oak, ash, beech, chestnuts, walnuts, and elms, encircled with vines, growing perfectly wild, but producing vast quantities of grapes, from which much wine and brandy are made. Cotton grows spontaneously, as well as the finest European fruit trees. Rice, wheat, millet, hemp, and flax, are raised on the plains, almost without culture. The valleys afford the finest pasturage, the rivers are full of fish, the mountains abound in minerals, and the climate is healthy. The rivers of Georgia, being fed by mountain torrents, are always either too rapid or too shallow for the purposes of navigation. The Georgians are christians of the Greek communion. The principal mountains are the Caucasus, separating it from Circassia.

Georgia, one of the U. S.; bounded SE. by the Atlantic Ocean, S. by Florida, W. by AL., N. by Ten., and NE. by S. C. Length 390 ms., mean width 150; area within a small fraction of 58,000 sqms. equal to 37,120,000 acres. Lying between lat. 30° 22' and 35° N.

Of all the states of the U. S., Geo. presents the greatest diversity of climate, and of vegetable production, indigenous and exotic. Its mountainous northern extremity, rises into an elevation favourable to the cereal gramina, whilst its southern extremity on the branches of Appalachicola, St. Mary's, and Altamaha, have a climate sufficiently mild to permit the growth, and even profitable culture of the sugar cane, orange, olive, date, and lemon trees. Between those extremes, every valuable vegetable substance produced in the U. S., can be brought to perfection. From the much higher temperature of the seasons on the Atlantic coast, than those in the basin of the Mississippi, tender tropical vegetables are cultivated upwards of two degrees of latitude farther N. in the former than in the latter region. Sweet oranges are cultivated in Beaufort district, S. C., lat. 30° N. This fruit ceases in Lou., at about lat. 36° 10' N. Oranges are cultivated along the entire seaboard of Geo., as is the sugar cane. Cotton may, however, be considered as the staple commodity of the state.

Geo. is naturally divided into three zones, presenting very distinct and appropriate features. First, the almost flat, and in many places inundated sea border; the sand hill tract, between the sea border and the falls of the rivers; and lastly, the hilly and mountainous section above the falls. The first is marked by some very productive islands, but generally, by a marshy, sterile pine wood soil, reaching up to 90 ms. inland. The second, or sand hill tract, inter-

persed with much very valuable river alluvion. The third, the most extensive, most fertile, and much the most salubrious part of the state, reaches from the interior of the middle zone to the utmost limits of the state. On the latter, is cultivated in full perfection, all the grains of the U. S., rice excepted, and an indefinite variety of orchard and garden fruits, and other vegetables. Taken as a whole, this state produces, grain, sugar, cotton, tobacco, indigo, &c.

The interests of education have received their share of attention in Geo. An university has been planned and partially established, consisting of Franklin college, already in operation at Athens, and of an academy intended to be located in each city. The latter part of the design remains necessarily incomplete, though several academical establishments have been actually formed. Free schools were projected in 1817, and 200,000 dollars appropriated by the Legislature to carry the enlightened project into effect.

The state is judicially divided into four districts, southern, eastern, middle and western. Similar to other states of the U. S., the Legislature of Geo., consists of a Senate and House of Representatives; but elections are more than ordinarily frequent. The members of both houses are chosen annually by the respective cities. The governor is chosen biennially by the Legislature.

In point of commercial importance, Geo. from the value of her products, holds a high rank; in 1817, her exports amounted to near 9,000,000 of dollars.

For local purposes, Geo. is subdivided into the following cities.

between the continent and Quadra and Vancouver's island. It extends from Johnson's Straits to the Straits of John de Fuca.

Georgy, pst. of Franklin city, Ver., situated on the E. side of Lake Champlain, about 5 ms. N. of Milton, containing 1800 inhabitants.

Georgia, *Southera*, island of the S. Pacific Ocean, discovered by Captain Cook in 1775, and so named by him. It is 31 leagues long, and 10 in its greatest breadth. It seems to abound with bays and harbours, which the vast quantities of ice render inaccessible the greatest part of the year. The valleys were covered with snow; and the only vegetation observed, was a bladed grass, growing in tufts; wild burnet; and a plant, like moss, which sprung from the rocks. Not a stream of fresh water was to be seen on the whole coast. This island lies between $18^{\circ} 17'$ and $35^{\circ} 34'$ W. long. and $55^{\circ} 57'$ and $51^{\circ} 57'$ S. lat.

Gerlingen, town of Suabia, in Wirtemberg, on the river Wiltz, 2 ms. E. of Stuttgart. Lon. $9^{\circ} 45'$ E. lat. $49^{\circ} 14'$ N.

Gerz, town of Germany, in Misnia, with a handsome college, on the river Elster. Lon. $11^{\circ} 55'$ E. lat. $51^{\circ} 50'$ N.

Gerzau, town of Germany, in Hesse-Darmstadt, capital of a district of the same name, 10 ms. NW. of Darmstadt. Lon. $8^{\circ} 29'$ E. lat. $49^{\circ} 15'$ N.

Gerbois, town of France, in the department of Oise, and late province of the Isle of France, 50 ms. N. by W. of Paris. Lon. $1^{\circ} 54'$ E. lat. $49^{\circ} 32'$ N.

Gebes, *Gebli*, or *Zerli*, island on the coast of Tunis. It bears no other corn than barley; but has large quantities of figs, olives and grapes, which, when dried, form the principal trade. It depends on the dey of Tripoli. Lon. $10^{\circ} 30'$ E. lat. $35^{\circ} 57'$ N.

Gerbailliers, town of France, in the department of Meurthe and late province of Lorraine, on the Ager, 5 ms. from Lunéville.

Gergenti, town of Sicily, near the river St. Blaise, 50 ms. S. of Palermo. Long. $13^{\circ} 27'$ E. lat. $47^{\circ} 24'$ N.

Gerzau, village of Switzerland on the N. side of the Lake of Schwetz, at the foot of the Rigi. It is a republic, the smallest in Europe. Its territory is 2 leagues in length and 1 in breadth, composed entirely of scattered houses and cottages, of a very neat and picturesque appearance. The inhabitants are computed at about 1200, and are much employed in preparing silk for the manufactures of Basle. This republic is under the protection of the cantons of Lucern, Uri, Schwyz, and Underwalden; and, in case of war, furnishes a quota of men. Gerzau is 12 ms. SW. of Schwyz.

German, St. town of France, in the department of Seine and Oise and late province of the Isle of France, on the Seine, near a forest, 4 ms. W. of Paris. Lon. $2^{\circ} 15'$ E. lat. $48^{\circ} 50'$ N.

German, pst. Montgomery city, Ohio, 13 ms. SW. from Dayton. Pop. 1820, 2079.

German Ocean, that expanse of water bounded by Germany and France S., by the British Islands W., a part of the northern Atlantic N., and by Norway, Iceland, and a part of Germany E. See *North Sea*.

Germany, country of Europe, 630 ms. in length, and 600 in breadth. Bounded on the E. by Hungary and Poland, N. by the Baltic sea and Denmark, W. by the Netherlands and France, and S. by Spain, Italy and Italy. Area 200,000 sqms. It contains a great many sovereign princes, who are independent of each other, and lately there was a number of imperial towns, which were so many little republics; but the whole of them formed a great confederacy, governed by political laws, at the head of which was an emperor, whose power in the collective body, or diet, was not directive, but executive. The Western Roman empire, which had terminated in the year 475, in the person of Augustulus, the last Roman emperor, and which was succeeded by the reign of the Goths, the Ostrogoths, and the Lombards, and Charlemagne, king of France,

in the year 800. This prince being then at Rome, pope Leo III. crowned him emperor, in St. Peter's church; and Nicephorus, who was then emperor of the E., consented to this coronation. After the death of Charlemagne, and of Louis le Debonnaire, his son and successor, the empire was divided between the four sons of the latter. Lothario, the first, was emperor; Pepin was king of Aquitaine, Lewis king of Germany; and Charles le Chauve, king of France. This partition was the source of incessant feuds. The French kept the empire under eight emperors, till the year 912, when Lewis III, the last prince of the line of Charlemagne, died without issue male. Conrad, count of Franconia, the son-in-law of Lewis, was then elected emperor. Thus the empire went to the Germans, and became elective; for it had been hereditary under the French emperors. The emperor was chosen by the princes, the lords, and the deputies of cities till the year 1239, when the number of the electors was reduced to seven, one more was added in 1449, and another in 1692; these nine electors continued to the year 1793, when, in consequence of the alterations made in the constitution of the empire, and the influence of France and Russia, they became ten in number, namely, the elector and archbishop of Ratisbon, the elector and king of Bohemia, (the latter emperors), the elector of Bavaria, the elector of Saxony, the elector of Brandenburg, king of Prussia, the elector of Hanover, (king of England), the elector of Wurtemberg, (late grand duke of Tuscany), the elector of Wurtemberg, the elector of Baden, and the elector of Hesse. Rudolphus, count of Hapsburg, was elected emperor in 1273. He is the head of the house of Austria, which is descended from Charlemagne, is the house of Lothar, reputed to descend from the person of Francis I., father of the two late emperors, Joseph and Leopold. On the death of Charles VI. of Austria, in 1740, an emperor was chosen from the house of Hapsburg, by the name of Charles VII. On the death of this prince, in 1743, the above-mentioned Francis, grand duke of Tuscany, was elected emperor; whose grandson, Francis II., enjoyed the dignity of emperor of Germany till 1806, when he formally resigned the title and office. At the close of the Saxon race, in 1740, the prerogatives of the emperor were very considerable; but, in 1557, they were reduced to the right of conferring all dignities and titles, except the privilege of being a state of the empire; of granting dispensations with respect to the age of majority; of erecting cities, and conferring the privilege of coining money, of calling the meetings of the diet, and presiding in them. But after all there was not a foot of land annexed to this title, for, ever since the reign of Charles IV., the emperors depended entirely on their hereditary dominions, as the only source of their power, and even of their subsistence. To prevent the calamities of a contested election, a king of the Romans was often chosen in the lifetime of the emperor, on whose death he succeeded to the imperial dignity of course. The emperor (always elected) was crowned at Frankfort on the Maine. The title of august, and pre-

tended to be successor to the emperors of Rome. Although he was chief of the empire, the supreme authority resided in the diet, which was composed of three colleges; the college of electors, the college of princes, and the college of imperial towns. The diet had the power of making peace or war, of settling general imposition, and of regulating all the important affairs of the empire; but the decisions had not the force of law till the emperor gave his consent. When a war was determined on, every prince contributed his quota of men and money, as valued in the matriculation roll; though as an elector or prince he might espouse a different side from that of the diet. All the sovereigns of Germany have an absolute authority in their own dominions, and can lay taxes, levy troops, and make alliances, provided they did not prejudice the empire. They determine all civil causes definitely, unless in some particular cases, in which an appeal may be made. These appeals were to two courts, called the Imperial Chamber, at Wetzlar; and the Aulic Council, at Vienna. The three principal religions are, the Roman Catholic, the Lutheran, and the Calvinists; but Christians of all denominations are tolerated, and there is a multitude of Jews in all the great towns. The principal rivers of Germany are the Danube, Rhine, Elbe, Weser, Main, and Oder. Germany was divided into nine circles, namely, Austria, Bavaria, Saxia, Franconia, Upper and Lower Rhen, Westphalia, and Upper and Lower Saxony; each of these includes several other states; and Bohemia, Moravia, Lusatia, and Silesia are not comprised in these ten circles. Germany lately contained six archbishops, and twenty-eight bishops; but this hierarchy was thrown into confusion by the secularizations in 1794, and is not yet restored to order. the archbishop of Ratisbon is primate and metropolitan of all Germany; the see of Mentz having been moved to Ratisbon. No country has undergone such a variety of changes for the last twenty years as Germany. This account must be considered as what Germany was previous to the year 1806; after which time, in consequence of the formation of the Confederation of the Rhine, the emperor Francis II., resigned his office as emperor of Germany, which dissolved that ancient constitution. And therefore, that confederation may now be considered as abolished. By the confederation of 1815, Germany was new modelled, and now stands as follows. A permanent diet is formed, and holds its sessions at Frankfort on the Maine.—The states which are entitled to representation in that body are the following:

| | Population. |
|---------------------|-------------|
| Austrian Germany, | 9,482,000 |
| Prussian Germany, | 7,223,000 |
| Bavaria, | 3,560,000 |
| Wurtemberg, | 1,395,000 |
| Hanover, | 1,305,000 |
| Saxony, | 1,200,000 |
| Baden, grand duchy, | 1,000,000 |
| Hesse Darmstadt, | 620,000 |
| Hesse Cassel, | 520,000 |

Carried over, 27,005,000

| | | |
|------------------------|---------------|------------|
| | Brought over, | 27,005,000 |
| Holstein and Luenenb., | - | 360,000 |
| Luxemburg, | - | 214,000 |
| Mecklenburg Schwerin, | - | 358,000 |
| Brunswick, | - | 210,000 |
| Nassau, | - | 303,000 |
| | | 28,450,000 |

The 6 largest have 4 votes in the general diet; Baden, Hesse Damstadt, Hesse Cassel, Holstein and Luenenb., and Brunswick, have each 3, and the residue two votes.

The following have each one vote, Saxe Weimar, Saxe Gotha, Saxe-Cobourg, Saxe-Meinungen, Saxe-Hildburghausen, Mecklenburg-Strelitz, Oldenburg, Anhalt Bernburg, Anhalt Dessau, Anhalt-Köthen, Schwartzburg-Rudolstadt, Schwartzburg-Sonderhausen, Hohenzollern-Heckingen, Lichtenstein, Hohenzollern-Sigmaringen, Waldeck, Reuss-Greiz, Reuss-Lobenstein, Hesse Homberg, Schaumburg-Lippe, Lippe, Lippe-Deimold; and the four free towns of Lübeck, Frankfurt on the Maine, Bremen, and Hamburg.

Taken collectively, these minor states have a population of 1,621,000; which added to 28,450,000, yields 30,071,000, as the entire population of Germany.

Many features of the ancient constitution have been revived. In ordinary concerns, the smaller states are divided into six classes, each class having one vote. The larger states have also each one vote in the discussion of questions of general import; or in the passage of fundamental laws, the diet is resolved into a general assembly and each state votes in its single capacity, as we have noticed. The military contingent, more nominal than real, is fixed in peace to 120,000, and in war to upwards of 300,000. The respective revenues of the German states are also in most instances too uncertain and capricious to admit exact specification. No people apply themselves more closely to their studies than the Germans; and the Hebrew is no where so generally learnt, or better understood. Printing is most extensively encouraged; every man of letters is an author; they multiply books without number; thousands of suppositions and disputations are annually published, with which they overstock the fairs of Frankfort and Leipzig; for no man can be a graduate in the universities who has not published one dissertation at least. The language of Germany is a dialect of the Teutonic, which succeeded that of the Celtic. Vienna is the principal city. Germany, 8½ tp. of Adams cy. Penn., on the ends of the Monocacy and Conewago creeks. op. 1820, 1272.

Germany, village, Shado tp. Somerset cy. Penn., on the head waters of Shade creek, 20 is. NE. from Somerset.

Gerustheim, town of Germany, in the palatinate of the Rhine, situated near the Rhine, 3 ms. W. of Philipsburg. This is one of the states of Germany appropriated as a barrier fortress, and 266,400 dollars voted by the diet for the augmentation of its works.

Gha, tp. Chataugue cy. N. Y. Pop. 1820, 947

Gerry, tp. Worcester cy. Mass. See *Phillipston*. Gers, department of France, in which are comprehended the late provinces of Gascony and Armagnac.

Gertrudenburg, town, kingdom of the Netherlands, in Brabant; situated at the E. extremity of the Hiesboch lakes, which are formed by the Maese, and make a good harbour. It is 10 ms. N. of Breda. Lon. 4° 52' E. lat. 52° 44' N.

Gerumenhi, ancient town of Portugal, in Alentejo, on a hill, near the river Guadiana, 18 ms. below Badajoz.

Gestrike, or Gestricin, province of Sweden, bounded on the N. by Helsingia, on the E. by the Gulf of Bothnia, on the S. by Upland, and on the W. by Dalecarlia.

Gettysburg, p. tv., borough, and seat of justice in Adams' cy. Penn., 28 ms. SW. of Yorktown, the capital of the cy. and 115 westward of Philadelphia, between Rock and Marsh creeks, branches of Monocacy, on a fine elevated site, with a fertile well cultivated surrounding country.

Gevaudan, territory of Languedoc, in France, bounded on the N. by Auvergne, on the W. by Rouergue, on the S. by the Cevennes, and on the E. by Velay. It is a mountainous hilly country; and now forms the department of Lozere.

Geyer, or Gower. See *Goar, St.*

Gez, town of France, in the department of Aine, and late province of Bresse, seated at the foot of Mount St. Claude, between the Rhone, the lake of Geneva, and Switzerland. It produces excellent cheese; and is 10 ms. NW. of Geneva. Lon. 6° 1' E. lat. 46° 25' N.

Geyser, hot springs in Iceland, flowing from the base of a mountain called the Laugerfell. The perpendicular elevation of the Laugerfell, according to Sir John Stanley, is only 310 feet, but remarkable as rising from a morass, and from being entirely isolated. The Geysers are not regular flowing fountains, but in form of wells; the water is ejected with great force by jets, as the French more expressively describe, by *clatement*. The basin or well of the Grand Geyser, is 31 feet in diameter, and whatever may produce the projectile force, the power must be very great, as the volume from such an opening is thrown, at intervals upwards of 100 feet high.

Gezira, town of Diarbeck, in an island formed by the Tigris, 70 ms. NW. of Mosul. Lon. 40° 50' E. 36° 36' N.

Ghanah, or Ghinnah, town of the empire of Cashna, in Africa. It is seated between a lake and the river Niger. It is 90 ms. NE. of the city of Cashna, and 208 S. of Agadez. Lon. 13° 12' S. lat. 15° 55' N.

Ghants. See *Gants*.

Ghants, passages or gates, has in the Sanscrit, exactly the same meaning as Gaps used in the U. S. The Delaware Water, and Wind Gaps, the Lehigh Water, and Wind Gaps, and all other similar mountain passes, would be designated "Ghants" in Hindostan. This term has, however, been transferred to two long chains of mountains in Southern Hindostan, known as the Western and Eastern Ghats.

The Western Ghats extend from Cape Comorin lat. 8° N. to the Tapti lat. 22°

or through 15° of lat. The direction a little W. of N. Length between 900 and 1000 ms., with a probable elevation of from 1000 to 4000 feet above the level of the ocean. A narrow strip of about 70 ms. wide, between this chain and the Indian Ocean constitutes the Malabar coast. The Western Ghauts, is at no point broken by rivers, but from its eastern slopes flow the sources of the Cavery, the Kistna, and the Godavery, which traversing Indostan, and piercing the Eastern Ghauts, are lost in the Bay of Bengal, on the Coromandel coast.

The Eastern Ghauts, more rugged and broken than the western chain, commences at N. lat. 11° , separating Mysore from the Carnatic, and ranging NNE. about 800 ms., are terminated towards the sources of the Nerbuddah. Where the Eastern Ghauts form the boundary between the Circars and the province of Berar, they are almost impassable, and only one pass, that of Salar Ghaut, admits horses or carriages. The general component rock is granite, rising in threatening walls to the clouds, in naked and sterile majesty. The native name of the Eastern Ghauts is Ellacooda.

Ghent, town of the kingdom of the Netherlands. It is seated on four navigable rivers, the Scheldt, the Lys, the Leive, and the Moere, which run through the city. The city is cut by many canals, which divide it into 26 isles, and over the canals are 300 bridges. It has also two navigable canals; the one to Sasivan Ghent, the other to Bruges and Ostend, the last of which was destroyed in 1798, by the British. It is 26 ms. NW. of Brussels. Lon. $5^{\circ} 49'$ E. lat. $51^{\circ} 3'$ N.

Gheriah, town of Hindoostan, on that part of the W. side called the Pirate Coast. It was lately the capital and principal port of Angria. It is 295 ms. S. by E. of Bombay. Lon. $73^{\circ} 8'$ E. lat. $17^{\circ} 59'$ N.

Ghulan, province of Persia, on the SW. side of the Caspian Sea; supposed to be the Hyrcania of the ancients. It is very agreeably situated, having the sea on one side, and high mountains on the other; and there is no entering it, but through narrow passes which may be easily defended. Resht is the capital.

Gillan, St. town of France, in the department of the North, and late province of French Hainault, seated on the Haina, 5 ms. W. of Mons. Lon. $3^{\circ} 53'$ E. lat. $50^{\circ} 28'$ N.

Ghizni, town of Hindoostan Proper, formerly the capital of an extensive empire of the same name. It is termed the second Mevlana, owing to the great number of illustrious persons interred here. Lon. $68^{\circ} 20'$ E. lat. $35^{\circ} 12'$ N.

Gholanville, pstv. Brunswick cty. Virg. 77 ms. SSW. from Richmond.

Giau Acul, village of Asiatic Turkey, at the mouth of the Hellespont, on the site of the ancient city Sigaceum, and is sometimes pronounced and written Yast Chel.

Gibralta, town of Spain in Andalusia, near a mountain of the same name, formerly called

Calpe, which with Abyla, on the opposite shore of Africa, were called the pillars of Hercules. Tarick, a general of the Moors, built a fortress here, which he called Gibel Tarick, that is Mount Tarick. Since that time, a town has been built at the foot of this rock, which is strongly fortified. It was formerly thought to be impregnable; but, in 1704, it was taken by the confederate fleet, commanded by Sir George Rooke, and has ever since continued in the hands of the English. The strait of Gibraltar is 24 ms. in length, and 15 in breadth, and a strong current always runs through it from the Atlantic to the Mediterranean. Gibraltar is 25 ms. N. from Centa, and 45 SE. from Cadiz. Lon. $5^{\circ} 17'$ W. lat. $36^{\circ} 6'$ N.

Glasgow, large and populous city of Stld., in Lanarkshire. From its extent, beauty, regularity, and modern improvements, it is undoubtedly the second, if not the first city in North Britain. The university, instituted in 1450, is constantly increasing in reputation. At present it consists of a chancellor, rector, dean of faculty, a principal, and 16 professors, of which, one is for law, 4 for theology, 5 for the study of medicine and subjects connected therewith, and the others for the faculty of arts. It has lately been greatly enriched in the mathematical department, by the library of the late celebrated Dr. Robert Simpson, author of the translation of Euclid, and has received an important addition, by a collection of rare books and manuscripts, in every department of science, but particularly in medicine, bequeathed by the late Dr. William Hunter, who has also left his extensive museum to the university of Glasgow. Besides the anatomical preparations in the museum, for which an elegant building has been

erected, contains the collection of shells, corals, insects, and fossils, made by the late Dr. Fothergill, and a cabinet of medals and coins, ancient and modern, the most complete of the kind in Europe. The observatory is well fitted up, and supplied with the most improved instruments for the use of the professor of practical astronomy. Glasgow has a considerable foreign trade, and its numerous manufactures, particularly of muslin, cotton, calico, coarse woollen cloth, porcelain, glass, the refining of sugar, and the tanning of leather, are carried on to a great extent. Glasgow was originally one parish, but is now, for the benefit of the poor and ease of ministers, divided into eight, with as many churches, besides three chapels of ease. The population of Glasgow, with its suburbs and dependencies, amounted in 1811, to 108,000. It is seated on the N. side of the Clyde, over which are two stone bridges. The river is navigable for vessels of 8 feet water, as far as the bridge, but large vessels stop at Port Glasgow, or Greenock, to unload. It has also the advantage of two canals, beside the Great canal that joins the Clyde to the Forth. Glasgow is 44 ms. W. of Edinburgh, and 60 SW. of Perth. Lon. $4^{\circ} 30' W.$ lat. $55^{\circ} 50' N.$

Glencoe, Vale of, valley in Stld., near the head of Loch Etive, in Argyleshire, noted for the cruel massacre of its unsuspecting inhabitants in 1691. King William had published a proclamation, inviting the Highlanders who had been in arms for King James II. to accept a general amnesty before the 1st of January, on pain of military execution after that period. Alexander MacDonald, laird of Glencoe, on the last day of December, went to Fort William,

the governor of which referred him to a civil officer. This made it the first of January before he could reach Inverary, where he surrendered to the sheriff, who, however, accepted his submission; in consideration of his offer to surrender the day before. The laird having taken the oaths, returned to Glencoe, in full assurance of safety; notwithstanding which, he and his whole clan, were butchered, on the 15th of February, and the whole of that beautiful valley rendered a scene of massacre and desolation.

The increase from 1801, to 1821, as shown by these tables, arises from two causes; first an actual increase, and secondly, from greater accuracy at every subsequent enumeration. From the latter cause, the amount given for 1821, is entitled to more confidence, than that for 1801, or 1811.

The following is a schedule of the British navy in 1822, taken from official returns made up at the Admiralty office.

In the preceding table, the British settlements on the W. coast of Africa, nor the island of St. Helena, are included, as they add nothing to the power of Great Britain. In India, are included only the area, and population actually held and governed by the British: and in America, are excluded, the illimitable wilds yet uninhabited by civilized man. With all these deductions, enough remains to form the most efficient political power, that has ever been formed. With the abundance and variety of her mineral treasures, her labour saving machinery, and insular position of the original centre of empire, the British nation possesses more than the positive force of one half the human species. How far such a machine, composed of detached parts, and heterogeneous materials, is calculated to secure individual happiness, or capable of duration, time alone can determine. But, at the present, London is the pivot on which rests the mental, moral, and physical energies of mankind. The aggregate

pop. of this vast empire, amounts to 100 to the sqm.. See *England*.

Any comment on this sublime monument of human genius and industry, would, or could answer no other purpose, than that of weakening the effect upon the mind of every liberal reader.

Greece, country of Europe, included in the empire of the Ottoman Turks. The boundaries of this truly interesting country, as well as the etymology of the name, are equally uncertain. The common opinion, of the Greeks themselves, derive their national appellation from Graicus, son of Thessalus. Many sources have been sought for the origin of this people, probability is in favour of the supposition, that the mass of the people originated from Gothic, or Scythian colonies, but, that their civilization, arts, and sciences, were drawn from the cultivated nations of western Asia, and NE. Africa. The word *ἰλασμός*, signifies a stork, or bird of passage, and is peculiarly applicable, to either a nomadic or commercial people, and given with the warm and happy felicity of Greek nomenclature. They prided themselves also, on the title of Autochthones; children of the earth. Gradually civilized, and quitting the nomadic state, rather by tribes, than nationally, new provincial names arose, and in the lapse of successive ages, the primitive names were lost, in those of Hellenians, Ionians, Dorans, &c.

We understand commonly by the name of Greece, the country generally so known, and which forms the SW. part of European Turkey. Though I have already observed that this country was peopled by colonies, advancing from the N., I have only, in the present article, included under the name of Greece, divisions admitted by the ancients themselves; but the Greek nation, not only inhabited that part of Europe, they also extended colonies into the S. of Italy, to which they gave the name of Magna Graecia; into Sicily, in which they founded many large and populous cities; on the coast of Africa, W. from Egypt, and particularly into Asia Minor.

The following synopsis will suffice for Greece Proper, and for the principal towns of each section.

Greece was divided into three great portions, by the hand of nature; these sections were, peninsular Greece, or the Peloponnesus, now Morea; Continental Greece, and Insular Greece.

Peloponnesus was subdivided into the provinces of Argolis, in which were the rivers Inachus, and Erasinus, and the cities of Argos,

Myæna, and Epidauria. Laconia, with the Eurotas river, and cities of Sparta, Amyclæ, Gythium, and Tænarium. Messenia, with the Pamisus river, and the cities of Stenyclarus, and Colonides. Elis, with the Alpheus, Anigis, and Selleis, and the cities of Olympia, Pisa, and Elis. Achaia, watered by the Melas and Cræthis rivers, and having the cities of Dyme, Patrae and Aegium. Sicyonia, with the river Asopus, and the cities of Sicyon, and Phlius. Corinthus, with the cities of Corinth, Lechaicum, and Cenchræ. The last subdivision of the Peloponnesus, was that of Arcadia in the centre, containing the Alpheus, Erymanthus, and Aoranius rivers, and the cities of Megalapolis, Mantinaea, Tegea, Orchomenus, and Phigalia.

Next followed Greece Proper, or Continental Greece, subdivided, advancing from S. to N.; into Attica, with the cities of Athens, Eleusis, and Marathon. Megaris, with the cities of Megara, and Nysæa. Boeotia, with the lake Copais, and river Asopus, and the cities of Thebes, Orchomenus, Chéronœa, Tanagra, Eleuteriæ, and Thespiæ. Phocis, with the river Cephissus, and the cities of Delphi, Elatia, Cryssa, and Anticyra. Doris, with the city of Cythinum. Locris Ozolæ, with the cities of Amphissa, and Næpactus. Locris Epicnemidii, with the city of Cnemides. Locri Opuntii, with the city of Opus. Aetolia, with the rivers Achelous and Evenus, and the cities of Thermi, Calydon, and Chalcis. Acarnania, with the cities of Argæ, Amphilocheium, Stratus, and Actium. Theasalia, with the rivers Peneus, Onchestus, and Sperchius, and the cities of Larissa, Pharsalus, Phærae, and Demetrias. Epirus, with the rivers Acheron, and Avas, and the cities of Butthrotum, and Nicopolis. Illyria, with the cities of Epidamnii, and Apollonia. Macedonia, with the rivers Erigon, Axios, Strymon, and Haliacmon, and the cities of Pella, Edessa, Thessalonica, and Olynthus.

Insular Greece was subdivided into the East, South, and West sections. That of the East, contained the islands of Thera, Naxia, Paros, Delos, Myconus, Tenos, Andros, Eos, Eubœa, Scyros, Thasos, and some smaller groups. That of the South, contained Crete, and Cythera. In the West, were Corcyra, Leucadia, Cephalonia, Dulichium, and Zacynthus.

In this exposition of the states of Greece, Macedonia is included; but it may be observed that it was only after the reign of Philip II., and his son Alexander II., or Alexander the Great, that the Greeks commenced to regard Macedonia, as a part of Greece. Before that period, the people inhabiting the country called Grecia, and also Hellas, regarded the Macedonians, as well as the Thracians, as barbarians. Similar observations might indeed be extended to Thessaly, Etolia, Acarnania, Epirus, and Illyria. These countries were slowly, and with the advance of arts, science, and political power, admitted into the list of Grecian states. Taken in *extenso*, Greece was bounded S. by the Mediterranean sea; W. by the Ionian, and part of the Adriatic sea; N. by the mountains of Illyria, Macedonia, and Thrace, and E. by Thrace, and the Aegean sea. It extended from lat. 35° to 48° N., or about 560 English ms., and

from E. to W. 250 ms. wide where broadest. Its area about 40,000 sqms.

Greece is formed by a peninsula, bearing a strong resemblance to that of Italy, the Peloponnesus representing Sicily. Nearly parallel to the two opposite coasts, extends a range of mountains with lateral ridges, branching towards each sea. The main chain gradually declines in elevation from N. to S. In the northern part of Greece, the ridges of Pindus, and Parnassus, rise to from 7 to 8000 feet, whilst the mountains of Boeotia and Attica, do not exceed from 500 to 1000 feet. Parallel to the main chain, another rises near the head of the Gulf of Salonica, or the ancient Sinus Thermaicus, and by the local names of Ossa, and Pelion, and Oeta, and Othrys, extends through Thessaly to the ancient Gulf of Artimium, and is continued through the islands of Eubœa, Andros, Tenos, Myconus, &c. The latter chain is in reality a ramification of the main central chain, which it leaves between the sources of the Haliacmon and Peneus rivers, and first stretching eastward toward the Thermanic gulf, thence turns SE. as already described.

Along the northern frontier of Macedonia, ranges Mount Orbelus, a part of the great chain of Mount Haemus. From Mount Orbelus, between the sources of the Axios and Strymon rivers, extends an humble but distinct ridge, of which Mount Athos in the Chalcidice, was the utmost southeastern termination. The countries of Acarnania, Etolia, and Epirus, are also extremely mountainous.

The Peloponnesus, now Morea, possesses its appropriate mountain ridges, of which, the principal are Mount Cyllene in the W. and Taygetus near the S. extremity. The whole peninsula is, however, excessively mountainous. The central table land of Arcadia, rising to an elevation which gives it a climate of considerable severity in winter, but a most salubrious and delicious atmosphere in spring, summer, and autumn. In brief, all Greece may be viewed as a region rough, but highly conducive to the full development of the human frame and mental faculties.

A country so indented, cannot be supposed abundant in rivers, but though comparatively small, and of limited length of course, many of the rivers of Greece are fine mountain streams, and some drain valleys rich with every gift of nature. Advancing from N. to S., we find in Macedonia, the three beautiful basins of Strymon, Axios, and Haliacmon. In Thessaly, spreads the basin of the Peneus, now Salampina, celebrated in all ages, as one of the most inviting spots on earth. The gorge through Mount Ossa, made by the Peneus in its escape to the Aegean sea, is the famous vale of Tempe. The Cephissus river of Boeotia, is remarkable as having no outlet to any sea.

Modern like ancient Greece, is naturally divided into peninsular, insular, and continental Greece.

Continental Greece extends 300 ms. from Cape Siumum, in the ancient Attica, to the mouth of the Gulf of Arta, or Ambracia, in a NW. and SE. direction. This country lies in form of a triangle, with a mean width of about 45 ms. and formerly contained the provinces of

Attica, Megara, Boeotia, Phocis, Locris, Etolia, and Acarnania. This was the most ancient division of Greece, but at a later period, Thessaly, Epirus, and Macedonia, were included under the general name of Greece. Epirus is now called Albania, and extends, in a direction of NW. and SE. from the Aphas river, to the borders of Illyria, 90 ms., with a mean width of 50 ms.; from the Ionian sea to the Metzovo mountains. Area 4060 sqms. Thessaly extends from the promontory of Sepias in the SE., to the northern extremity of Mount Pindus, and sources of the Peneus, now the Salembria river, 116 ms., mean width 35 ms.; area 4060 sqms. Macedonia extends from N. to S. 175 ms., mean width E. and W. 140 ms.; area 24,360 sqms. The island of Negropont, ancient Eubœa, is about 100 ms. long, with a mean width of 12 ms.; area 1200 sqms.; forming, from its position, a part of continental Greece.

Insular Greece contains the islands of:

Thus we find that this grand theatre of early history does not equal in area, Peninsular Italy.

Greece in all parts, even in the smallest islands, is mountainous, and one town may be detached from its usual area, leaving only about 33,000 sqms. capable of sustaining dense pop.

A very interesting subject of discussion would be a comparison between ancient and modern Greece; but our knowledge of either, is too vague to enable us to draw satisfactory conclusions. From want of historical and ancient authors, we are at a loss to ascertain many important points in the history of this country, during its most prosperous period. Statistics, however, so indispensable to political science, was almost entirely neglected by the historians of Greece

and Rome. The pop. of ancient states must be determined by comparative estimates. It is recently, and yet partially, that modern nations have adopted the simple means of enumeration to discover and measure their respective physical force. To enable us to approximate in some measure to a correct view of the pop. of ancient Greece, we have two military estimates, made at different periods; one by Herodotus, where he details the troops of Greece, at the battle of Plataea, Ante C. 479, and the second, when Philip II. king of Macedonia, was declared Generalissimo of all the armies of Greece.

In the 28th section of Caliope, Herodotus, gives the following table of the military forces of Greece in the second Persian invasion.

|--|--------|
| Spartans, Lacedemonians, and Helotæ | 79,500 |
| Athenians | 8,000 |
| Tegealæ | 1,500 |

This document, although it does not enable us to fix the proportion between the military and other parts of the pop., is, however, precious, as serving to determine the relative force of the states of southern Greece nearly 5 centuries before our era. Only 108,600 Greeks were actually embodied against the Persians at Plataea; as the northern Greeks joined the invaders. If we allow 108,600 to have been the two thirds of the military pop. at that period, then about 145,000 would represent the entire disposable force. Twenty to one, it is probable, as it is in modern times, was about the relative number of troops in the field, and the residue of the pop. This would yield an aggregate of 2,896,000, as the mass of inhabitants in Greece, 479 years before our era. If we assume 3 millions in round numbers, we find an aggregate of 70 to the sqm. In Greece, as in every other country, in every age, the increase and decrease of mankind depended more on moral, than physical causes. Great temperance, simplicity of manners and little use of animals, when superadded to personal freedom, were all favourable to pop. in the ancient states of Greece; but a powerful check was given to general prosperity by domestic slavery, which prevailed in every part, but particularly in Athens, and Lacedemon; we have seen, nevertheless, that the former, on a territory of about 500 sqms., had at one period upwards of 300,000 inhabitants, or 600 to the sqm. All Greece thus peopled would have contained a pop. of more than 26 millions, but the effects of the Persian and Theban wars, would warrant the

conclusion that Greece never at any period contained as many as 3 millions of inhabitants.

In Ante C. 337, the assembled states of Greece at Corinth, named Philip II. king of Macedonia as generalissimo, and voted a force of 235,000 men. This army when united to the troops of Macedonia, would have formed a mass of about 300,000 men. Greece and Macedonia, were now at the very acme of their conjoint power, and yet three years afterwards, with all this pomp of numbers, Alexander was unable to quit Europe with 50,000 men, when he undertook the invasion of Persia. In fact the Grecian army at the battle of Platæa was the most numerous ever assembled by that nation, on any occasion whatever. When invaded by the Romans, their armies were generally small, and when the former were commanded by skillful generals, the latter ceded and fell a prey to the invaders. Fifteen centuries after the Roman conquest, the Turks obtained similar success with even less effective resistance. Since the late sanguinary contest with their Mahomedan masters the number and component material of the pop. of Greece, have become problems of intense interest. Hobhouse gives to modern Attica, 25,200 inhabitants; but this estimate is made upon Attica restricted to within mount Cithæron, on about 350 sqms. The Greek revolted provinces are, the Morea, Attica, Boeotia, (*Livadia*), and a few of the Islands. The whole of this extent, may amount to the one third of all Greece and Macedonia, or to about 14,600 sqms. If Attica contains 25,200 inhabitants on 350 sqms., the aggregate is 72 to the sqm., and allowing such distributive pop. to all Greece, the amount would be 3,178,000, a number far above what any evidence we possess would warrant. To many it will appear revolting to be told that there has not yet been at any moment since their revolt, a pop. of one million opposed to the Turks; and yet, if such an estimate is erroneous, I am afraid that the error is in excess.

The moral material is again a far more important subject of inquiry, than mere numbers. Commencing in the N. with Albania, always less civilized than the more southern Greeks, is now inhabited by a race, not much above the savage state. "The countries composing Albania," says Hobhouse, "seem, in parts, to have been peopled by an almost uninterrupted succession of barbarians. Illyricum and Epirus are not often mentioned by historians, without a notice of the peculiar ferocity of their inhabitants. It was not until the reign of Tharytas, king of the Molossians and Thesprotians, from whom Pyrrhus was fourth in descent, that the Greek language and manners were introduced into the country, which, as it was divided into several petty principalities and republics, could, after all, never have been more than partially civilized. As to the Illyrians, Polybius calls them the enemies of all nations, and no more civilized than the Thracians, or the Getae; and Livy accounts for the superior ferocity of one of the four Roman divisions of Macedonia, by the inclemency of their climate, the infertility of their soil, and the vicinity of the barbarians." This picture of the country and its inhabitants, is as faithful a representation of both

at the present epoch, as for ages prior and subsequent to the Roman conquest of Greece. When that conquest was consummated, and Macedonia lay in the direct route from the capital of the empire, to the more distant provinces of the east, a military road was opened, and called the Ignatian Way. This road led from Apollonia, Dyrrachium, and Aulor, over the mountains, through Lychnidas, Pylon, and Edessa, 250 ms. to Thessalonica. Whilst this thoroughfare existed, some degree of mental improvement must have been superinduced; but the decline of Roman power, and subsequent revolution, closed to the still barbarous pop. of Epirus, every avenue of intelligence, and as early as the reign of Julian II. the decay of its cities was noticed. In 696, Alaric first laid waste the country, and then settled in it with his Goths. The Vandals, as destroyers, had preceded the Goths, but a still more effective revolution was the consequence of the invasion of the Scythian Slavi. This fierce and rude people crossed the Danube about the middle of the sixth century, supplanted the ancient, and introduced a new and still more barbarous pop. In the process of a few succeeding centuries, these rude hordes were expanded, and established in Epirus, Macedonia, continental Greece, and the Morea. As the empire of the Romano Greeks declined, the Slavi formed a powerful kingdom between the Danube and Mount Haemus, and in the west embracing Epirus. This kingdom was known by the name of Bulgaria. The Bulgarians invaded Panonia, in the beginning of the sixth century, defeated the imperial army, and were bribed to retire; an expedient which was, in effect, a security for their return. After many attempts and changes of fortune on both sides, the Slavi were firmly established S. of the Danube, had given their new name to the Moesian provinces, Bulgaria, which now designates the country. As early as 665, the Bulgarians advanced towards Constantinople, and reached Varna, from where the impolitic expedient of tribute obtained their momentary retreat; but they were now a nation of southern Europe, and a most formidable scourge to the Romano Greeks. In 810, the emperor Nicephorus invaded Bulgaria, but was enveloped and destroyed with all his army. Three years afterwards, the Bulgarians rushed into the empire, and besieged Constantinople. Their extreme danger at length roused the Romano Greeks, who were still sufficiently powerful, when in any manner well directed, to repress these hordes, and they were driven from the empire. At the time of peace their intercourse with the Greeks, brought the Bulgarians gradually to the rule of Christianity, which, however, produced but little moral change in their sanguinary and barbarous manners. The wealth and weakness of the Romano Greeks, incited constant hostility, and in 913, Simeon, king of Bulgaria, was before the walls of Constantinople. Through the greatest part of the 10th century, the Bulgarians maintained their ascendancy, but in 974 the Romano Greeks had the good fortune to be ruled by a hero, Basil II. This consummate general, though unable to prevent the Bulgarians from, in 994, taking Thessalonica, and rushing in a destructive tor-

rent into Boetia, Attica and Peloponnesus, yet as this invasion, by dispersing, weakened their force, in the face of their now formidable opponent, he in a few years so effectually crushed their power by reiterated defeats, that in 1017 they submitted to become his subjects.

These Slavonic bands had been now established S. of the Danube upwards of 500 years, and though composed of various tribes and nations, they imperceptibly melted into one mass, or rather into two; the eastern section known as Bulgarians, and the W. as Albanians. They had been independent tribes long enough to change the name of the provinces they inhabited, and as early as the 11th century, Rascia, Servia, Bosnia, Croatia, Bulgaria, and Albania, had commenced to supplant the ancient provincial names of this part of Europe; and what was of greatly more consequence, to spread barbarism over the remotest corners of Greece.

To complete its degradation, in 1204, the imperial capital fell into the hands of a French and Venetian force, and a French nobleman placed on the throne of Constantine. Centuries before its actual conquest, the Normans, Genoese, Venetians, Catalans, &c. under the general name of Franks, had made the continent and islands of Greece a thoroughfare in their approaches towards, and retreat from the Mahometan countries of Asia, and Africa. So deeply influential were those expeditions, and consequent commercial intercourse, as to give a new language to the eastern part of the Mediterranean, and the lingua Franca, became a lasting testimony how far the Latin nations had supplanted the Greeks, in the very centre of Greece. In 1303, the Catalans, under the sectional name of Amogavarez, and admitted with robbers and murderers from Italy, were fixed in the Romano Greek empire, by Michael Palæologus. From the commencement of the 14th, to the middle of the 15th century, or for a period of 150 years, the Catalans or Amogavarez, completed the physical and mental ruin began by the Bulgarians, Avars, and Albanians. Finally, the Mahometan Turks, already in Europe since 1353, totally subverted the empire by storming Constantinople. Forced by the Turks from Thrace, the Catalans settled in continental Greece, and that fine region became once more partitioned into barbarous principalities of small extent. For several centuries, Greece, in respect to civilization and political importance, was in a worse condition than it was during the heroic ages, twenty-five hundred years before. In the darkest period of the heroic ages, Greece had one language; but under the influence of desolation, her incomparable language was superseded by barbarous dialects, so rude to admit reduction to written rules. Of all the crowds from the north, east, and west, which trampled the soil of ancient science, the Venetians and Genoese alone contributed to arrest the progress of ignorance and barbarism; and even the Venetians and Genoese, being rivals in commerce, their mutual contests increased disorders at the very heart of the Romano Greek empire. In fine, from the age of Constantine to the late revolution, the real Greek, and the Greek language, were disappearing from the earth, and had not the catastrophe been pre-

vented by fanaticism on all sides, the Greeks, Turks, Albanians, and all other nations inhabiting the Ottoman empire, must have, in the lapse of five centuries, melted into one common mass, and have adopted the language of their conquerors. The Romans had already produced such an effect; but with the Romans, justice, liberty, and law, followed the sword: in Turkey all was mere brutal force.

From every evidence I have been able to collect, Albania, the Morea, continental Greece, Thessaly, Macedonia, and Thrace, are now inhabited by a hostile mixture of the descendants of Greeks, Romans, Goths, Vandals, Slavi, Spaniards, modern Italians, and Ottomans, with other races of less consequence. A difference of manners, customs, religion, and language, is met with in every petty district. The Scythian character, according to Hobhouse, prevails in the mountainous regions, as well as in the Morea, Attica, and Boetia. It must be obvious from what has been stated in this article, that to talk of Greeks in Greece, is little, if any less absurd, than to talk of Romans in Italy. A new national association may arise in Greece, but cannot be Greek. The real character of a subjugated people is always, infinitely better than their reputation; therefore what degrading accounts we read of the mixed inhabitants of Greece ought to be received with liberal allowance, for the disadvantages under which they labour. We must expect to find in the Morea and the islands, more remains of the ancient Greek manners and character, than in continental Greece; as foreign aggression and alloy, could reach the former with more difficulty than the latter section of this still very interesting country. This is the fact, as attested by Hobhouse, Poqueville, the Duke of Choiseuil Gouffier, Chateaubriand, and indeed by almost every traveller. Much of the ancient personal appearance, dress, and manners are retained, even in continental Greece, but the moral base is overturned. Amongst ancient nations, when books were made up in manuscript, and of course excessively dear, the great body of society must have remained ignorant. It was individual rather than national intelligence, which gave pre-eminence to ancient Greece; and when foreign domination crushed the germ of genius, the arts, sciences, and national grandeur disappeared. I will not say with Hobhouse, that Greece cannot in any case be independent, but must confess that I see but little to hope in their favour. With two great military empires on one side, and a greater commercial empire on the other, and both inimical to their actual emancipation, the Turks are left undisturbed to gain experience in the art of war, and must in the end succeed in resubjugating or exterminating that nation we call Greek. This sanguinary consummation may be averted by the Greeks becoming a dependant on Great Britain, or submitting to a Russian or Austrian Vayvode.

Though not very generally fertile, the soil of Greece is more productive than could be expected from a country so broken by mountains. It is more celebrated for fruits than grain. The plains and valleys of Greece, produce however, in sufficient abundance, wheat,

barley, rice, maize, millet and other cerealia. Its fruits are abundant and delicious; the principal species are figs, grapes, apples, &c.

In many places, extensive orchards of the white mulberry tree are cultivated, to feed the silk worm. The modern name of the Peloponnesus, the Morea, is derived from *Morus*, the Latin name of the Mulberry tree.

Honey is also amongst the most valuable productions of Greece. That of Attica, has been from time immemorial celebrated for its peculiar excellence. Cotton and tobacco, in modern times, have been introduced and are now generally cultivated.

In brief, Greece wants only freedom and release from the deteriorating and murdering despotism of the Turks, and national union, to again resume her rank amongst the most respectable nations of the world. Considerable advance has been made during the last 70 years, in rousing the Greeks to a recollection of what was once their ancestors, and an anticipation of what they may themselves be, restored to self government. Literature has made, if we estimate the many impediments opposed to its advance, astonishing progress of late. Great attention is paid to the ancient and modern languages of Greece. The former distinguished by the title of Hellenic, and the latter, by that of Romaic, and differing about as much as Latin and Italian.

Increasing intelligence, and reading of their own classic authors, have led to a result which was inevitable, a resistance against their ancient and ferocious oppressors. That resistance is now in operation, and lost must that heart be, which is not with its every feeling, arrayed on the side of the Greeks; would to heaven we could accompany our sympathies in this case with rational hope, but alas! dark is the prospect.

Greenland, general name by which are denoted the most easterly parts of America, stretching towards the N. pole, and likewise some islands to the northward of the continent of Europe, lying in very high latitudes. This country is divided into West and East Greenland. Greenland was for a long time considered as a part of the continent of West Greenland, but is now discovered to be an assemblage of islands lying between $76^{\circ} 46'$ and $80^{\circ} 30'$ of N. lat. and between 9° and 20° of E. lon. It was discovered by Sir Hugh Willoughby, in 1553, who called it Greenland, supposing it to be a part of the western continent. In 1595, it was again visited by William Barentz and John Cornelius, two Dutchmen, who pretended to be the original discoverers, and called the country Spitzbergen, or Sharp Mountains, from the many sharp-pointed and rocky mountains with which it abounds. The only quadrupeds of either W. or E. Greenland, are deer, white bears, and foxes. To its frozen seas, the English and other nations repair annually, in the proper season, to fish for whales. See *Spitzbergen*.

Greenland, hitherto considered as a part of the continent of America, has been determined by the researches of captain Parry, to be separated from that country by a strait, or rather an intricacy of straits and islands.

Guiana, large country of S. America, is bounded on the E. and N. by the Atlantic Ocean, on all other sides its limits are rather indefinite. The term is indeed used vulgarly for the country between Venezuela and Brazil. The British, Dutch, French, Spanish and Portuguese nations, all have settlements in Guiana. British Guiana, reaches from the Essequibo to the Corantyn river. Dutch Guiana, from the Corantyn to the Marou. French Guiana, from the Marou to the Aruary. Portuguese Guiana, from the Aruary to the Amazon. Spanish Guiana, is now included in Venezuela. The settlements of the civilized nations are confined to the coast, or to the banks of some of the larger rivers, at a very limited distance inland. Dutch Guiana, is more particularly known by the name of Surinam, and that appertaining to France as Cayenne. The principal British settlements, are, Essequibo and Demerara. The pop. of the European colonies, amounts to about 230,000; of which those of Spain have 50,000; British 100,000; Dutch 80,000; French 20,000. The body of the inhabitants are negro slaves, the whites in all the settlements, not being computed above 20,000. The sea coast of Guiana, is one vast plain of unequalled fertility. Staples, sugar, coffee, and cotton.

Guinea, large region of Africa, of which little is known except the coast. It lies in the torrid zone, between $14^{\circ} W.$ and $28^{\circ} E.$ lon. and is divided into Upper and Lower Guinea. The first comprehends Sierra Leona, the Grain coast, the Tooth-coast, the Gold coast, the Slave coast (which includes Whidah, Dahomy, and Ardrafah) Benin, Biafara, Majumbo, Gabon, and Anziko. Lower Guinea is commonly called Congo. It is very unhealthy for Europeans. There are many

little states, whose chiefs are often at war with each other, when the people taken, on both sides, are sold for slaves; and it is not uncommon for the nearest of kin to sell each other. The English, Dutch, Portuguese, Danes and French, have factories upon this coast.

Guinea, New, or *Papua*, island of the S. Pacific Ocean, to the N. of New Holland, from which it is separated by Endeavour strait. It is next in size to New Holland, extending SE. from the equator, to $12^{\circ} S.$ lat. and from 131° to $153^{\circ} E.$ lon., a length of more than 1200 ms. by a medial breadth of perhaps 300; but the coasts of the eastern part are far from being completely investigated. The northern part is said to have been discovered by the Spaniards, in 1528, who had sailed from Mexico, to explore the Spice Islands. The coasts are generally lofty, and in the interior, mountain rises above mountain; but the whole appears covered with luxuriance of wood and herbage. The cocoa, sago, bread-fruit, and plantain-tree, beside most of the trees, shrubs, and plants common to the islands in the S. Pacific Ocean, are found here in great perfection. This island is the chosen residence of the singular birds of Paradise, which breed here during the wet monsoon, and in the dry migrate in flocks westward, to the smaller islands, particularly Aru. The inhabitants make much the same appearance as the New Hollanders.

Guzerat, peninsula of Hindoostan Proper, about 200 ms. long, and 140 broad, formed by the Arabian Sea, and the Gulfs of Cambay and Cutch. The W. part is mountainous and woody, and inhabited by a wild hardy race, governed by rajahs of their own. But the largest, as well as the finest part, is subject to the Mahrattas. Amedabad is the capital.

Guzerat, province of Indostan, 320 ms. long, and 180 broad, lying between the parallels of 21° and 24° N.; bounded N. by Aljemere; on the S. by the sea, and the province of Arungabad; on the E. by Malwah and Kandeish; and on the W. by portions of Sinde, Cutch, and the sea. Though traversed by the rivers Nerbudah, Tuptee, Mahy, Mehindry, and Sabermatty, a scarcity of fresh water is experienced in many parts of Guzerat. The peninsular section, as indeed the whole province, is in a remarkable manner broken by mountains, plains, and deserts; and the pop. presents as great variety of sects, castes, and customs. Surat and Amedabad are the principal cities. Most of this province is subject to the direct rule of the British.

Gwalior, ancient fortress of Hindoostan Proper, in the province of Gohud, and on a branch of the Jumna. It stands on a vast rock, about four miles in length, but narrow and of unequal breadth, and nearly flat on the top. The sides are so steep as to appear almost perpendicular in every part; for where it was not naturally so, it has been scraped away; and the height from the plain below is from 200 to 300 feet. This place is considered as the Gibraltar of the E.; but, in 1780, Major Popham took it, by an unexpected nocturnal escalade. It is 80 ms. S of Agra. Lon. $78^{\circ} 30'$ E. lat. $26^{\circ} 9'$ N.

Hæmus Mountains, that vast chain, which, continuing the Illyrian Alps, extends through European Turkey to the Black Sea, separating the sources of the streams flowing N. into the Danube from those which are discharged SW. into the Adriatic, and S. into the Archipelago. Concerning the Hæmus chain, Poqueville observes; "that Mount Orbelus (see *Orbelus*)

seems to be the kernel, the central point of the mountains of Macedonia; and that Scardus or Frissendi, Scornius or Desproto-Dag, Hæmus or Balkan, are but ramifications from it. This giant, however, which spreads around his arms to so great an extent, appears himself, to be but an irradiation from the great Alpine chain. It is from these elevated regions known under the name of the Morican Alps, that we must depart to follow the general system of the mountains; and in examining the summits through this great extent of country, we shall trace their connection with Orbelus.

"This mountain is covered with perpetual snow. Its centre is granite; as far as its middle region it is covered with vegetative soil. From its sides flow an infinite number of springs, which are the principles of the rivers that run into the Mediterranean. Besides the leading chains I have mentioned, the inferior branches of Orbelus enclose the valleys of Thrace, through which flows the Hebrus; they form the defiles of Macedonia, and surround the vast basin of Thessaly. Some slope by steep descents towards the sea; others slope gradually to the plains. Olympus, Ossa, the mountains of Attica, Parnassus, and Helicon, are all but secondary chains, or dependencies upon Orbelus. Pindus and the other mountains of Epirus, form a part of the system of Orbelus. Pindus will be found to communicate with the mountains of Dalmatia; its branches form the Sagovian mountains, as well as those of Tamaris, and the Acroceraunians, while the Little Pindus gives birth to the granito-calcareous mountains of Souli. The chain that coasts the Arothez, ascends to the neighbouring chain above the Achelotis. The arid mountains of Ætolia, those that border the Gulf of Corinth, or that bristle Acarnania, are ramifications of Pindus."

Haf, or estuary of the Oder, large bay of Denmark and Prussia, in Pomerania. It is closed towards the Baltic by the islands of Usedom and Wollin.

Hamburg, free and imperial city of Germany, in Lower Saxony, consisting of the old and the new town, both nearly of an equal size. Most of the houses are built after the manner of the Dutch, and richly furnished within. The principal streets of the old town have long and broad canals, which are filled by the tide. It is seated on the rivers Elbe and Alsters, and the latter, before it enters the town by sluices, forms a fine basin. Here is a celebrated college, an arsenal, a bank, and a handsome exchange. The inhabitants were estimated till lately at 100,000. The religion is Lutheran, and none but the English have the liberty of performing divine service in a chapel of their own. Hamburg, from its situation, has all possible advantages for foreign and domestic trade, particularly

from its communication, by the Elbe, with some of the principal navigable rivers of Germany; and hence it is one of the most commercial places in the world. It is distinguished for its sugar-refinery, and it has manufactures of cotton stockings, gold thread, ribands and velvets. It is 55 ms. NE. of Bremen. Lon. $10^{\circ} 1' E.$ lat. $53^{\circ} 33' N.$

Though rather foreign to the nature of this treatise. I have concluded from the novelty, and fair promise of his plan, to annex the address of Mr. Owen, to the people of the U. S. on his arrival at the city of New York, Oct. 1825 — *Nat. Intel. Nov. 12th, 1825*.

At Sea, New York, Dec. 10th, 1825.

AMERICANS: I am again returning to your shores, and I return with a fixed determination to exert all my powers for your benefit, and through you for that of the world at large.

In your industry, and mechanical knowledge, and general enterprise, in the quality, and cheapness of your soil; in the extent and variety of your climate; in your liberation, in part, from the prejudices of the old world, but more particularly in the freedom of your government, you amply possess the means to secure immediately the most important private and national benefits, both to yourselves and to your posterity, and to give them to other nations still more in want of them.

It is true, you have derived many advantages from your European ancestors, but it is equally true that you have transplanted a very large portion of their errors and prejudices; you cannot, therefore, enjoy to their full extent the benefits to which I refer, until these errors of the old world shall have been removed.

The greatest and most lamentable of these

are the notions—that human nature has been so formed as to be able to believe or disbelieve, and to love and hate, at pleasure, and that there can be merit or demerit in believing or disbelieving, and in loving or hating.

These false notions are the origin of evil; and the real cause of sin and misery among mankind; yet they are received and continued, in direct opposition to every fact known to the human race.

Every one may easily ascertain for himself that they are errors of the imagination.

Let any one endeavor, by his own will alone, to compel himself to believe what he disbelieves, or has been taught to think he disbelieves. For instance, let any one who is a sincere Christian, endeavour, with all his power, to compel himself to believe that Mahomet was a true prophet; or a devout Jew, that Jesus was the true Messiah, and only son of God; or a conscientious Musselman that Mahomet was a cheat and an impostor. Or, again, let any one endeavour to dislike that which by his nature and education he has been made to like.

This experiment, if fairly and honestly made, will be sufficient to convince any one, that belief and disbelief, love and hatred, are not under the control of the will. It is, therefore, irrational in the extreme to maintain that man can be accountable for either, and most unjust and injurious to force any such absurdity into the infant mind.

Yet all religion and laws have been hitherto founded on this error. Hence, their want of success; hence the present irrational state of the human mind in every part of the world; and hence nearly all the evils, except those of climate, which afflict the inhabitants of the U. S.

When these errors shall have been removed, there will be no obstacle to great improvements in education, rapid advances in valuable knowledge of every kind, the creation of wealth, and the arrangement and government of society, for the well-being and happiness of the inhabitants of every state in the Union.

But this change cannot be effected until society shall be remodelled on principles in strict accordance with our nature, nor until men shall be taught the facts upon which these principles are founded; viz. that no infant ever formed any part of itself; that no two infants are alike; that infants from birth are gradually formed into the characters which they afterwards become, by the circumstances which exist around them acting upon the peculiar combination of faculties, qualities, and propensities, which has been given to each infant at birth.

A knowledge of these facts will develop the real nature of man, and show the importance and necessity of well directing the circumstances which shall form the characters of the next and future generations, and which may materially amend those of the present.

Having devoted many years to acquire a knowledge of the influence of the various circumstances by which men have hitherto been formed and governed, and in applying this knowledge to practice, I am induced to think that the experience thus obtained will enable me to explain to the world the science of the influence of circumstances, through a know-

ledge of which society may be in future so arranged and governed that it shall almost always produce happiness, and scarcely ever produce misery.

It cannot be expected that a subject so comprehensive in practice and so new in the world should be readily understood by a verbal or written explanation, except by a few superior minds. I have, therefore, had a model formed, explanatory of the proposed new arrangements, under the influence of which the character and condition of each individual and of society, cannot fail to be entirely changed and incalculably improved.

The model I bring as a present to the General Government of the U. S., that the individual government of each State may have an opportunity of obtaining a copy of it, and that all, if they choose, may be equally benefited, should the plan be found to comprise all the extraordinary advantages which long experience has taught one to think it possesses.

The model and all the knowledge which experience has imparted to me on the various subjects connected with it, I freely give, without the expectation of any return. You possess nothing which I desire to obtain, except your good will and kind feelings, and these you cannot avoid giving, if circumstances shall be created to produce them; and if not, you cannot bestow them. Your wealth, places, and honours, I could not, with my views, either value or accept. Your praises would be no praises to me; and the principles which I entertain lead me to estimate future fame less than an infant's rattle. I come to you with a fixed determination to make no pecuniary gain in your country—I come to you, therefore, with no sordid, nor with any interested motive, unless it be one, to desire to see so many of my fellow-creatures enjoy the happiness which I believe this change of your system will produce. If you do not make the change, I cannot, in the slightest degree, blame any of you; but I shall attribute the want of success of my views to the deficiency of power in myself to explain them in such a manner as to make it appear to be your interest to adopt them. All I ask is, that you will fully and honestly examine the subject.

Your friend,

ROBT. OWEN.

W. of the former, and 1800 E. of the latter; and was discovered by the Portuguese in 1502, on St. Helena day. Afterward, the Dutch were in possession of it till 1600, when they were expelled by the Eng. in 1673: the Dutch retook it by surprise; but it was soon after recovered. It has some high mountains, particularly one called *Diana Peak*, which is covered with wood to the very top. There are other hills also, which bear evident marks of a volcanic origin, and some have huge rocks of lava and a kind of half vitrified flags. The chief inconvenience to which the island is subject, is want of rain; however, it is far from being barren, the interior valleys, and little hills, being covered with verdure, and interspersed with gardens, orchards and various plantations. There are also many pastures, surrounded by enclosures of stone, and filled with a fine breed of small cattle, and with Eng. sheep; goats and poultry are likewise numerous. The inhabitants do not exceed 3000, including near 500 soldiers, and 1600 blacks, who are supplied with corn and manufactures by the Company's ships in return for refreshments. The town, called *Lameton*, is small, situated at the bottom of a bay on the S. side of the island, between two steep dreary mountains. This island has now become classic ground in history by becoming the place of exile, and death of the emperor Napoleon, and containing the grave of this extraordinary man. He was landed on the island, October 5, 1815; died on the 16th, and was interred on the 9th of May, 1821, aged 51 years, 8 months, and 20 days. He was born at Ajaccio, in Corsica, August 15th, 1769.

Himmaleh, chain of mountains in Asia, which extends from Cabul along the N. of Hindoostan, and is the general boundary of Thibet, through the whole extent from the Ganges to the river Testa. Himalah, Himaleh, from the Sanscrit *Hem*, snow, the original and present name of that stupendous chain of mountains, which separates Hindoostan from Thibet. The Himalah chain branches from the Hindoo Cooch, in the NW. part of India, and in Afghanistan and inclining SE. rises between the sources of the Ganges and those of the Brahmapootra, to the highest peaks yet measured on earth. By the active and scientific operations of Crawford, Colebrook,

Webb; and other British officers, the great elevation of this chain has been determined. The following table exhibits the elevation of some of the principal peaks, and ghauts or passes.

| | Fect. |
|--|-------|
| Niti Ghaut, or pass, (see <i>Ghaut</i> .) | 16814 |
| Limit of perpetual snow on the side of Tibet, | 17000 |
| Limit of perpetual snow on the side of Hindoostan, | 12000 |
| Dhawalagiri peak, | 26862 |
| Jamootri peak, | 25500 |
| Dhaiboon, seen from Catmandoo, | 24768 |
| Another peak seen from do. | 24625 |
| Another peak seen from do. | 23362 |

The singular circumstance of the limit of perpetual snow in the Himalah chain, being higher on the southern than northern exposure, is accounted for by Malte Brun, from the high plateau of Tibet affording a reflective surface much nearer the summit, than does the more depressed plains of Nepal and Indostan.

Hindoostan, or *India*, celebrated country of Asia, which in its most extensive signification, comprehends the tract situated between the Thibetian and Tartarian mountains on the N., the Indian Ocean on the S., the Burrampooter, and the bay of Bengal on the E., and the Indian Ocean and Persia on the W. But this country must be considered under the three grand divisions of Hindoostan Proper, the Deccan, and the Peninsula. Hindoostan Proper includes all the countries on the N. of the river Nerbuddah, which bounds it on the S. as far as it goes; Bengal and Bahar compose the remainder of its southern boundary. It is divided into eleven soubahs, the names of which are Lahore, Moultan, (including Simly,) Agimere, Delhi, Agra, Oude, Allahabad, Bahar, Bengal, Malwa, and Guzerat. A 12th soubah, named Cabul, was formed out of the countries contiguous to the W. sources of the Indus, and three new ones out of the conquests of the Deccan; Berar, Candesh, and Amednagar. The Deccan in its most extensive signification is applied to the whole region of Hindoostan Proper; in its more restricted sense, it means only the countries situated between Hindoostan Proper and the river Nerbuddah; these are Candesh, Dowlatabad, Berar, &c.; the Circars, the chief part of Guzerat, Vissapoor, and Concan. The tract S. of these, or the River Kistna, is generally called

the Peninsula; although its form does not authorize that appellation; it includes a small part of Golconda, Mysore, and the Carnatic, with Madura, and other smaller districts; the W. coast being called that of Malabar, and the E. that of Coromandel. The principal rivers of this extensive region are the Ganges, Burrampooter, Indus, Jumna, Pudda, Nerbuddah, Tapti, Godavery, Kistna, Pennar, and Cauvery. The chief mountains are those of Himmaleh and the Gauts. To give an idea of the modern revolutions in the empire of Hindoostan, it is proper to observe, that from a pure Hindoo government, it became, at last, a Mahometan state, and continued to be so, under various dynasties, till the beginning of the 18th century.

The Mahometans entered India early in the 11th century, under Mahmood of Ghizni, and under various names, continued more or less powerful in that country until supplanted by Europeans, who reached that peninsula by sea. The advance of European power in southeast Asia, since 1497, when reached by the Portuguese, has eventuated in one of the most remarkable and influential revolutions which has ever changed the condition of nations. The following table shows the comparative extent and pop. of the British and the yet independent provinces of Indostan. The pop. is given for 1822, and extracted from Malte Brun.

| | Sqms. | Population. |
|--|-----------|-------------|
| British Territory; Bengal Presidency, | 328,000 | 57,500,000 |
| British Territory; Madras Presidency, | 154,000 | 15,000,000 |
| British Territory; Bombay Presidency, | 11,000 | 2,000,000 |

| To which now add Aracan, say | 60,000 | 6,000,000 |
| Total British Territory and that of their Allies, Independent States — | 1,163,000 | 129,000,000 |
| These are in great part in the northern and northwestern parts of India; the chief are, the Rajahs of Nepal and Lahore, the Ameers of Sindb, and Schindia, with a small tract under the Afghans, | 177,000 | 11,000,000 |
| Total of Indostan, | 1,340,000 | 140,000,000 |

The British policy in India, has been hitherto conducted with a jealous view to prevent the rise of a mixed nation in India, having European blood as its principle of vitality. No landed property can be held by a native of Europe;

therefore, though the ruling people, the British in respect to numerical force, compose only an atom in India. The real resident pop. is formed of two classes; the first, and greatly the most numerous, is indigenous Hindoos. The second, composed of Persians, Arabs, Tartars, Jews, Portuguese, Mongols, and Afghans, are scattered over the country, chiefly in the cities and along the maritime coasts, and are estimated at about 10,000,000. The genuine Hindoos, after every reasonable reduction, must exceed 100,000,000; but, subdivided by cast, by language, and by religion, this ancient and civilized race, has never been united under one sovereignty. The Mogul empire, founded early in the 16th, and subverted in the 18th century, was Mahometan, foreign, and ferocious in its administration. More just, because emanating from nations where respect to fixed laws is incorporated into human motives to action, the British power in India must produce beneficial effects.

The Hindoos, or Gentoos, are of a black complexion; their hair is long, their person straight and elegant, and their countenance open and pleasant. They differ materially from all other nations, by being divided into tribes or casts. The four principal tribes are the Bramins, Soldiers, Labourers, and Mechanics; and these are subdivided into a multiplicity of inferior distinctions. There are Bramins of various degrees of excellence, who have the care of religion allotted to them, and are held sacred by the rest; some of these acknowledge the errors that have crept into their religion, own one Supreme Being, and laugh at the idolatry of the multitude, but insist upon the necessity of working upon the weaknesses of the vulgar; yet the generality of them are as ignorant as the laity. Such as are not engaged in worldly pursuits are a very superstitious, innocent people, who promote charity as much as they can, both to man and beast; but those who engage in the world are generally the worst of all the Gentoos; for, persuaded that the waters of the Ganges will purify them from their sins, and being exempt from the utmost rigour of the courts of justice (under the Gentoo governments) they run into much greater excesses. The Soldiers are commonly called Rajah-poots, that is, descended from the rajahs. They are much more robust than the rest, have a great share of courage, and a nice sense of military honour, which consists, among them, in fidelity to those they serve. Fighting is their profession; they readily enter into the service of any that will pay them, and will follow wherever he leads; but, should their leader fall in the battle their cause is at an end, and they run off the field, without any stain of their reputation. The English E. India company have many battalions of them in their service: they are called Sepoys, and are clothed and disciplined in the European manner. The Labourers include farmers, and all who cultivate the land. The Mechanics include merchants, bankers, and all who follow any trade. These again are subdivided into each profession. Beside these, are the Hallachores, who cannot be called a tribe, being rather the refuse of all the tribes. They are a set of unhappy wretches, who perform

all the vilest offices of life, bury the dead, and carry away every thing that is polluted. All the different tribes are kept distinct from each other by insurmountable barriers: they are forbidden to intermarry, to cohabit, to eat with each other, or even to drink out of the same vessel with one of another tribe. Every deviation from these points, subjects them to be rejected by their tribe, renders them polluted for ever, and obliges them, from that instant, to herd with the Hallachores. The members of each cast adhere invariably to the profession of their forefathers: from generation to generation the same families have followed, and still continue to follow, one uniform manner of life. To this may be ascribed that high degree of perfection conspicuous in many of the Indian manufactures; and also that striking peculiarity in the state of Hindoostan, the permanence of its institutions, and the immutability in the manners of the inhabitants. Hence it is, that the Hindoos admit no converts, nor are themselves ever converted, whatever the Roman missionaries may pretend. The Hallachores may be here excepted, who are glad to be admitted into any society where they are treated as fellow creatures. The Hindoos tie with the Chinese, in respect to the antiquity of their nation; and the doctrine of transmigration is one of their distinguishing tenets. Their institutions of religion form a complete system of superstition, upheld by every thing which can excite the reverence of the people. The temples, consecrated to their deities are magnificent; their religious ceremonies splendid; and the absolute dominion which the Bramins have obtained over the minds of the people is supported by the command of the immense revenues, with which the liberality of princes, and the zeal of pilgrims and devotees have enriched their pagodas. The dominion of religion extends to a thousand particulars, which, in other countries, are governed by the civil laws, or by taste, custom and fashion. Their dress, their food, the common intercourses of life, their marriages, and professions, are all under the jurisdiction of religion. The food of the Hindoos is simple, consisting chiefly of rice, ghee (a kind of imperfect butter) milk, vegetables, and oriental spices. The warrior cast may eat of the flesh of goats, sheep and poultry. Other superior casts may eat poultry and fish; the inferior casts are prohibited from eating flesh or fish of any kind. Their great luxury consists in the use of the richest spices and perfumes of which the great people are very lavish. The esteem milk the purest of food, because they think it partakes of some of the properties of the nectar of their gods, and because they esteem the cow itself almost as a divinity. Their manners are gentle. Their happiness consists in the solaces of domestic life; and they are taught by their religion, that matrimony is an indispensable duty in every man, who does not entirely separate himself from the world, from a principle of devotion. Their religion permits them to have several wives, but they seldom have more than one; and their wives are distinguished by a decency of demeanour, solicitude in their families, and a fidelity to their vows, which might do honour to human nature,

in the most civilized countries. The custom of women burning themselves in the fire with the corpse of their husbands is still practised in Hindoostan. The code of Gentoo laws, with their sacred books, the *Veidam* and the *Srasta*, are written in the Sanscrit language, which is very copious and nervous, although the style of their best authors is wonderfully concise. Hindoostan, toward the N. is pretty temperate, but hot toward the S.; and it rains almost constantly for three months in the year. Its products are diamonds and other precious stones, silks, spices, aromatics, drugs, maize, rice, and sugar; and the chief manufactures are muslins and calicoes. But these and various other particulars will be found under the different names of its provinces, cities, towns, mountains, and rivers, described in this work.

Politically, Hindoostan is now divided between the following powers. The Mahrattas are yet the most powerful native people of India, and retain either all, or part of Ajmeer, Agra, Allahabad, Gujerat, Malwah, Berar, Orissa, Khandeish, Dowlatabad, Visiapore, and Concan. British India, contains Bengal, Behar, the Circars, and Canara, with part of Agra, Oude, Allahabad, Guzerat, Malwah, Berar, Orissa, and some extensive tracts in the Deccan, &c.

The Nizam, rules over Golconda, part of Berar, Visiapore, and Dowlatabad. Part of Oude continues subject to its Nabob.

The Sikhs, next to the Mahrattas, the most powerful native people of India, and retain very extensive territories; consisting of states in the Punjab and Multan.

Some other regions continue subject to native rulers; the Afghans possess extensive territories in the N.W. part of Hindoostan; Serinagar, under its own Rajah; Nepaul, under the Ghoorkali, or Rajah; and Bootan Lama of Tibet; as independent sovereigns, the Rajahs of Assam, Odeypore, Jypore, and Joudpore, with many other petty chieftains.

Kandahor and Cashmere, are, though vaguely, considered as Hindoostanic regions. See *Cashmere* and *Kandahor*.

Hottentots, Country of the, large region in the S. extremity of Africa, extending N. by W., from the Cape of Good Hope, beyond the mouth of Orange river, and from that Cape, in an ENE. direction, to the mouth of the Great Fish river, which parts it from Caffraria. It lies between the tropic of Capricorn and $35^{\circ} S.$ lat. and is bounded on the W., S., and E. by the Atlantic, Southern, and Indian Oceans, and on the N. by regions very little, if at all, explored. The Hottentots are as tall as most Europeans, but are more slender; and the characteristic mark of this nation is, the smallness of their hands and feet, compared with the other parts of their body. Their skin is of a yellowish brown hue, resembling that of an European who has the jaundice in a high degree. There are no such thick lips among the Hottentots as among their neighbours the Negroes, the Caffres, and the Mozambiques: and their mouth is of the middling size, with the finest set of teeth imaginable. Their heads are covered with hair, more woolly, if possible, than that of the Negroes. That part of the Hottentot country possessed by the Dutch or British is considerable; extending from the Cape of Good Hope, N. to lat. 30, and E. to the Great Fish river, about 550 ms. in length, and 230 in breadth. The most part is naturally barren and mountainous. See *Cape Town*.

Hudson Bay, bay of N. America, lying between 51 and 69 N. latitude, discovered in 1610 by Captain Henry Hudson. This intrepid mariner, in searching after a NW. passage to the Pacific Ocean, discovered three straits, through which he hoped to find out a new way to Asia. This bay communicates on the N. by two straits, with Bassin Bay, on the E. side it is bordered by Labrador, on the SW. by New S. Wales, and on the W. by New N. Wales. These countries, included under the name of New Britain, abound with animals whose skins and furs are far superior in quality to those found in less northerly regions. The natives are called Esquimaux, and northern Indians; and are materially different from all the southern tribes. In 1670, a charter was granted to a company for the exclusive trade to this bay. This company possess three forts, on the S. coast of James Bay, by which name the S. part of Hudson Bay is distinguished; these factories are called Rupert, Moose, and Albany, but the former has been abandoned. On the W. side of Hudson Bay, up Hayes river, is a factory called Flam-borough; and to the N. of this is York Fort and Prince of Wales Fort. In December 1770, Mr. Hearne, in the service of the Hudson Bay Company, set out from Prince of Wales Fort to explore a river, that the Esquimaux, who came to the Company's factories to trade, had brought to their knowledge; and which, on account of much copper being found near it, had obtained the name of Copper-mine river. Under the convoy of these Indians, he arrived at this river in 1771, and traced it till he came in sight of the Pacific Ocean, finding it incumbered with shoals and falls to its mouth, which is in lat. 72 N. By late observations the position of Heame's river, is found much more to the W. than laid down by that traveller.

Hudson, river of N. Y. The basin of the Hudson, if we include Rariton bay and river, the bay of Newark, with its two small confluent rivers, Hackinsack and Passaic, and the contiguous part of Long Island Sound, in the Hudson basin, we have before us a very curious connexion between inland and maritime navigation.

Taken with this extension, the Hudson basin reaches from Sandy Hook, N. lat. 40° 30' to the extreme source of the Hudson, in N. lat. 44° 5', or above 250 ms. in length, with a mean width of 40 ms., exclusive of the western part of the valley of Mohawk, above the mouth of Schoharie river. This latter section includes a parallelogram of 60 ms. long, and 35 wide. The whole basin spreading over an area of 14,600 sqms. The Hudson river is navigable for large ships to Hudson, and for sloops to Albany. The tide flows to Troy, to which small sloops ascend. When the two great canals of N. Y. are completed, the Hudson will have a water communication with lakes Champlain and Erie. Hudson, one of the most flourishing cities in the state of N. Y., situate on the E. bank of Hudson river, in Columbia city, 115 ms. N. of the city of N. Y., and 30 S. of Albany, in the lat. of 42° 15' N. The foundation of the first house was laid in 1783, and in 1800 it contained 4048 inhabitants, and by the census of 1820, 5310. It is considered the third town in the state in manufactures, and the fourth in commerce. The site rises by a gentle acclivity from Hudson river, and the main street following the ascent, extends above a mile from the water.

The manufactures of the city of Hudson, in 1822 stood as follows:

| | Persons employed. | Yearly consumption of wool. | Yearly amount of cloth manufactured. |
|-----------------|-------------------|-----------------------------|--------------------------------------|
| Scott, | 100 | 93,600 | 156,000 |
| Dickson, | 20 | 10,400 | 15,600 |
| Surfleis, | 40 | 20,800 | 31,200 |
| Barber, | 52 | 28,000 | 41,600 |
| R. Reed & Co. | 50 | 54,000 | 110,000 |
| Patterson & Co. | 200 | 130,000 | 200,000 |
| Underhill, | 20 | 13,500 | 146,800 |
| Knight, | 20 | 12,000 | 10,000 |

and 1,200 yards of Diaper.

At *Columbiaville*, (See *Columbiaville*) there are three cotton mills, two on the N. side of the creek, and one on the S. side, which is a new one. The two on the N. side manufacture weekly 10,800 yards of cotton shirting, which in a year, (allowing 50 working weeks,) amounts to 540,000 yards, which valued at 13 cents per yard, amounts to 70,200 dollars.

The new mill, on the S. side, is calculated to produce 360,000 yards per year, of a fine fabric, which valued at 24 cents per yard, amounts to 86,400 dollars.

These three mills give employment to about 250 persons, and yield support to 57 families.—*Nat. Int. June 18th, 1825.*

Hungary, kingdom of Europe, bounded on the N. by Poland and Silesia, W. by Moravia, Austria, Stiria, S. by Slavonia and Servia, and E. by Walachia and Transylvania. It is divided into Upper and Lower Hungary; and to these may be added the Bannat of Temeswaer, incorporated into the kingdom of Hungary, in 1778. Hungary formerly included Transylvania, Slavonia, Dalmatia, Servia, and Walachia. The principal rivers are, the Danube, Save, Drave, Tresse, Maros, Raab, and Waag. The air is unhealthy, occasioned by the lakes and bogs; but it abounds in all the necessities of life, and the wine, especially that called Tokay, is excellent. There are mines of gold, silver, copper, and iron; and also of opal, at Czerweniza, which gem is peculiar to this country. There is such plenty of game, that hunting is allowed to all. The inhabitants are well shaped, generous, and brave, but haughty and revengeful, and are estimated at 7,000,000. The trade principally consists of cattle, hogs, sheep, flour, wheat, rye, wool, and wine, and these are almost wholly sent to the Austrian provinces. The kingdom of Hungary can easily raise an army of 100,000 men. The horsemen are called Hussars, and the foot Heydukes. Almost all the towns of Hungary have two names, the one German and the other Hungarian, and the language is a dialect of the Slavonian. The government is hereditary in the house of Austria. No country in the world is better supplied with mineral waters and baths; and those of Buda, when the Turks were in possession of it, were reckoned the finest in Europe. Buda is the capital of Lower Hungary, and Presburg of the Upper. Pop. of Hungary, in 1822, including Transylvania, and the Bannat of Temeswaer, comprised:

Hydra, island of Greece, the ancient Aristeia. It is a rocky mass, about 3 ms. from Cape Skylla, in the Morea, about 3 ms. by one, and containing a harbour and commercial town. The latter rose from the favourable position of the place for commerce. Previous to the late revolution, the Hydriots had 80 ships of an average of 300 tons. In 1810, they purchased from the Turkish government the right of electing their own magistrates, but joined the other Greeks against their common oppressors, and by their naval skill did most effectual service. This brought upon the Hydriots, in 1824, the vengeance of their enemies, who attacked and took the island, massacring such of the inhabitants as fell into

their hands. In a few days, however, it was retaken, and a most sanguinary retaliation inflicted upon the Turkish garrison.

Ireland, large island to the W. of Norway,

300 ms. in length, and 150 in breadth, lying between 64° and $66^{\circ} N.$ lat. For two months together the sun never sets; and in the winter it never rises for the same space, at least not entirely. The middle of this island is mountainous, stony, and barren; but in some places there are excellent pastures, and the grass has a fine smell. The ice which gets loose from the more northern country in May, brings with it a large quantity of wood, and several animals, such as foxes, wolves, and bears. Mount Hecla is the most noted mountain, and is a volcano, which sometimes throws out sulphureous torrents. The inhabitants believe that some of the souls of the damned go to this mountain, and that others are confined to the ice near this island. Their houses are at a distance from each other, and many of them deep in the ground; but they are all miserable huts, covered with skins. Many of the inhabitants profess Christianity; but those that live at a distance are pagans. They are mostly clothed with the skins of beasts. The Danes trade with the natives for hides, tallow, train oil, whalebone, and seahorse's teeth, which are as good as ivory. Iceland, which was considered by the ancients as the Ultima Thule, or the extremity of the world, and by us as scarcely habitable, once abounded in learning and science, at a time when great part of Europe was involved in darkness. Their language was the old Gothic or Teutonic, the vernacular language of the Swedes, Danes, and Norwegians, before it branched into the several dialects since spoken by the natives of these three kingdoms.

Ickworth, town of Eng. in Suffolk, 23 ms. NW. of Ipswich, and 74 NNE. of London. Lon. $1^{\circ} E.$ lat. $52^{\circ} 22' N.$

Icolmkill, formerly Iona, a small island of Stld., and one of the Hebrides, about 1 mile from the SW. point of the island of Mull. It is 3 ms. long and 1 wide. Icolmkill now contains only about 80 families, of poor and ignorant people, amounting in all to about 400; but this neglected spot, during the dark ages, was one of those sacred asylums, which even the ferocity of almost savage warriors was taught to respect. This salutary operation of superstition contributed to preserve in the remote Icolmkill, some fragments of science amid general barbarism. It was this little islet that was made the refuge of St. Columba, and from which the Christian religion shed its benign rays over Stld. and its islands.

Icoum, town of Asiatic Turkey, in Caramania; it is now called Konia, and is situated in a valley of the Lycæonian mountains, upon or near a small lake without an outlet. E. lon. 32° 40', N. lat. 38° 30', about 300 ms. SE. from Constantinople.

Illinois, river, rises near the S. end of Lake Michigan, and taking a SW. course, falls into the Mississippi, 18 ms. above the Missouri. See *Illinois, state of*.

Illinois is the fourth state of the U. S. in respect to extent of territory, and the first in point of fertility of soil. Excepting Georgia, it is also the state whose climate and seasons differ most at the N. and S. extremities. Extending through 5° of lat., Illinois embraces the greatest extent N. and S., of any section of the U. S. New York only reaching through four and a half, and Georgia about an equal distance. The latter is indebted to the greater inequality of its surface, for the superior variety of its climate.

Illinois is a country of very little inequality of surface compared with its great extent. The lower or southern part is rolling rather than hilly, and not one eminence in the state, it is probable, would reach 600 feet above the common level.

In point of soil Ill. admits a similar classification with Ohio and Indiana; though in proportion to extent, the former has less wet irremediable land, and more rich prairie than the two latter. The state may be considered as rolling in its southern and western, and level in its eastern and north-eastern sections.

In its central parts the prairies almost vie in extent with those of Lou., Ark., and Miss. Their margins are generally composed of rich soil, which as elsewhere, deteriorates in receding from the woods. Extensive, however, as are the prairies, the much greater proportion of the state is covered with forest timber of growth suitable to the soil and climate.

The Illinois river is an object, however, that though its entire course is within the state of the same name, from some peculiar circumstances in its natural history, becomes rather a subject of general than local interest.

In examining the rivers of the Ohio valley flowing from its right slope, we find their currents slow near their sources, and gaining accelerated rapidity in their progress towards their common recipient. The cause of this increased velocity of current has been discussed and explained. This common characteristic distinguishes the Muskingum, Sciota Great Miami, and Wabash, but does not extend to the Illinois. The latter has many traits peculiar to itself; the most remarkable of which are the immensity of its bed, and the uniformity of its current. What may in strictness be designated the bed of Illinois is from 2 to 3 ms. wide, and in some places even more. This space would seem to indicate an ancient quantity of water far greater than now flows down that river. In fact the present appearance of the stream much more resembles a strait than river, in the simple acceptance of the latter term. The water flows gently, and in a great measure uniform in all its length. Rapids there exist none worth notice in Illinois, and except at very low water, but very little local acceleration is any where perceptible.

The country around the southern extremity of Michigan lake is mostly composed of level swamp intersected by interlocking streams, or rather lagoons. This is more particularly the case between the lake and the heads of the Platte branch of Illinois. Here the face of the

globe so nearly approaches to a perfect level, as to produce almost stagnation in the waters, and leave them nearly balanced on this table-land.

Lake Erie is elevated 565 feet above tide water in the Hudson at Albany. The distance from Lake Erie to Lake St. Clair, is 38 ms., from Lake St. Clair to Lake Huron 35 ms., and through the straits of Michilimackinac 10 ms., or the entire length of current between lakes Erie and Michigan is 73 ms. Of this distance the current is every where gentle except the efflux of St. Clair river from Lake Huron at Fort Gratiot, where a strong current, rather than rapid continues about 2 ms. An allowance of 6 inches per mile is too high an estimate; but in this instance we will assume that rate; and consequently allow an elevation of 36½ feet for the surface of Lake Michigan over that of Erie, and give to the former 601½, or in round numbers 600 feet above tide water in the Hudson, and about 500 above the surface of the Gulf of Mexico. The existence of the Gulf stream demonstrates, that the surface of the Gulf of Mexico is elevated at least 100 feet above that of the Atlantic Ocean between the Chesapeake and New York bay inclusive. The point of confluence of the Monongahela and Alleghany rivers, at the city of Pittsburgh, is above the surface of Chesapeake bay, within a trifle of 800 feet. All these estimates are formed, on mathematical operations, or on the result of analogical induction ~~about~~ equally certain; and the singular facts are developed, that if channels were open from Pittsburgh into Erie and Michigan, the Ohio would flow into the latter with a descent of 200 feet in about 400 ms., and into the former 235 feet in little more than 100 ms.

If we allow 361 feet, as the difference of level, between the water at the mouth of Ohio, and the surface of the Gulf of Mexico; it is about 230 ms. by water between the mouths of Illinois and Ohio, a fall of 6 inches per mile would amount to 115 feet, which, added to 361, yields 476 feet as the height of the mouth of Illinois above the surface of the Gulf of Mexico.

We have already determined that of lake Michigan to be 600 feet, therefore differing only 36 feet from the Mississippi at its junction with the Illinois.

It has been determined by repeated experiments, that loaded boats of considerable size can pass from the Mississippi through Illinois, into the Canadian sea, and *vice versa*. Very little current is found in the small, and very short streams, which interlock with the sources of the Illinois, and flow into the southern extremity of Michigan; therefore the sources of Illinois cannot be much above the surface of lake Michigan. Fifteen or 20 feet is as much as the data before us will justify; of course the whole volume of Illinois, from a point opposite the head of Chicago river, in a distance following the windings of upwards of 400 ms., does not fall 60 feet.

The face of the globe may in vain be examined, to find any other spot, except the sources of Orinoco, and the Rio Negro, in S. America, where natural facility to internal communication

by water, is equal to that we have this moment surveyed. If we glance an eye over the immense regions thus connected; if we regard the fertility of soil, the multiplicity of product which characterize those regions; and if we combine those advantages afforded by nature, with the moral energy of the free and active people which are spreading their increasing millions over its surface, what a vista through the darkness of future time opens. The view is indeed almost too much for the faculties of man. We see arts, science, industry, virtue, and social happiness, already increasing in those countries beyond what the most inflated fancy would have dared to have hoped, thirty or forty years ago.

The foregoing estimate is confined to the southern and settled parts of Illinois. The whole state is calculated to embrace 58,900 sqms; it is obvious, therefore, that comparatively a small part of this state is yet inhabited by civilized settlers. Taken as a whole, it is, however, from the tenor of the best information, the most fertile continuous tract of land in the U. S., and in a peculiar manner accessible to navigation.

By the census of 1820, there were found in Illinois, whites, 53,788; free coloured persons, 506; and slaves, 917; the whole amounting to 55,211, thus classed:

| | |

Illinois was admitted into the confederacy as an independent state, in December, 1818.

The progressive pop. of Illinois since 1810. has advanced with considerable, though unequal celerity with that of Ohio and Indiana, but nevertheless with constant and considerable rapidity. In 1810, the number of inhabitants was 12,282, in 1820, 55,211, and in 1825, by the state census, 72,817.

Illock, strong town of Slavonia, seated on the Danube, 15 ms. from Peterwaradin, and 55 NW. of Belgrade. Lon. 20° 6' E. lat. 45° 36' N.

Ilm, or *Stuht Ilm*, town of Upper Saxony, in the cty. of Schwartzburg-Rodolstadt, 14 ms. S. of Erfurt.

Imene, lake of Russia, in the government of Novogorod, which has a communication with the lake Lajoga, by the river Volkhof. Lon. 30° E. lat. 50° N.

Ilminster, town of Eng., in Somersetshire, in a dirty bottom, among the hills, 137 ms. W. by S. of London. Lon. 2° 54' W. lat. 50° 55' N.

Illyria, vague name for the regions NE. from the Gulf of Venice. It has in no age been clearly defined. Since 1816, the title of *kingdom of Illyria*, has been given to that part of the Austrian empire, included in Carinthia, Carniola, Friule, Cividat, Istria, and Croatia. It is again subdivided into the governments of Laybach, and Trieste. Area 15,500 sqms. Pop. 1,060,000.

Ise, river of Germany, rising in the mountains of Bohemia, and running S. falls into the Danube at Illstadt.

Isley, East, town of Eng., in Berkshire, on a pleasant valley, between two hills, and excellent downs for feeding sheep. It is 53 ms. W. of London. Lon. 1° 22' W. lat. 51° 32' N.

Ist, town of the kingdom of the Netherlands, in Friesland, on the Weymer, 12 ms. S. of Leeuwarden. Lon. 5° 24' E. lat. 53° 1' N.

Illstadt, town of Germany, in Bavaria, seated at the confluence of the Danube and Ills, opposite Passau. Lon. 13° 57' E. lat. 48° 27' N.

Ustrop, town of Sweden, in West Gothland. Lon. 11° 51' E. lat. 57° 23' N.

Itten, town of Lower Saxony, in the principality of Lunenburg.

Ilshofer, town of Suabia, in the territory of Halte.

Ilmenstadt, town of Suabia, 20 ms. E. of Lindau. Lon. 10° 20' E. lat. 47° 35' N.

Imbro, woody and mountainous island in the Grecian archipelago. It abounds with game, and is about 20 ms. in circumference.

Imeritia, country of Asia, between the Black sea and the Caspian, bounded on the S. by Turkey, on the W. by Mingrelia, on the N. by Ossetia, and on the E. by Georgia, of which it is properly speaking, a part. The Imeritians are of the Greek religion. Their patriarch, who is generally of the royal family, can seldom read or write, and the inferior clergy are not better instructed. Their churches are wretched buildings, scarcely to be distinguished from common cottages, but from a paper cross over the principal door, and some paintings of the virgin and the saints. Cutais is the capital. Imeritia, is now, politically subject to Russia, but in its own municipal concerns independent.

Immenhausen, town of Hesse-Cassel, in Germany.

Immenstadt, town of the cty. of Konegsegg, in Suabia. It is situated on a small river 14 ms. SE. of Isny.

Imola, populous town of Italy, in Romagna, with a bishop's see; seated on the Santerno, 45 ms. N. by E. of Florence. Lon. $11^{\circ} 45'$ E. lat. $44^{\circ} 28'$ N.

Imperial, pleasant town of S. America, in Chili, seated on a craggy rock, in a charming country. Lon. $72^{\circ} 35'$ W. lat. $38^{\circ} 40'$ S.

Inchcolm, island in the frith of Forth, near the coast of Fife, but within the cty. of Edinburgh.

Inchkeith, desolate little island of Stld. in Edinburghshire, in the frith of Forth, lying midway between the ports of Leith and Kinghorn. Here is a ruinous fort.

Inchmarnock, beautiful little island of Stld. SW. of the isle of Bute. It is one mile long, and on the W. side are vast strata of coral and shells. It derives its name of Inchmarnock from a chapel dedicated to St. Marnoc, the ruins of which are still to be seen.

Indapour, seaport of the island of Sumatra. Lon. $100^{\circ} 50'$ E. lat. $41^{\circ} 50'$ N.

Independence, tp. Sussex cty. N. J. Pop. 1830, 1850.

Independence, pst. in the SE. part of Alleghany cty. N. Y., 20 ms. SE. from Angelica.

Independence, tp. Cuyahoga cty. Ohio. Pop. 1820, 354.

Independence, pstv. and seat of justice, Bond cty. Ill., on Kaskaskia river, 65 ms. a little N. of E. from St. Louis. Lat. $38^{\circ} 47'$ N. lon. W. C. $12^{\circ} 11'$ W.

Inachus, small river of Greece, in the Morea, rising in the mountains S. from Corinth, and flowing S. passes Argos and is finally lost in the Gulf of Napoli, near Napoli di Romania.

India, extensive region in Asia, which lies between 66° and 93° E. lon. and 7° and 35° N. lat. Under this name, the Europeans have erroneously included all the countries which lie S. of Tartary, and extend from the eastern frontiers of Persia to the eastern coast of China. But the name of India can be applied, with propriety to that country only, which is distinguished both in Asia and Europe, by the name of Hindoostan. The countries to the E. of the river Burampooter, namely, Aracan, Assam, Ava, Burmah, Cambodia, Cochinchina, Laos, Malacca, Pegu, Siam and Tonquin, which geographers have hitherto distinguished by the name of the Peninsula of India beyond the Ganges, are no more to be considered as belonging to India, than the bordering countries of Persia, Tartary and Thibet. See *Hindoostan*, *Chin India* and *Oceania*.

Indiana, cty. of Penn.; bounded by Westmoreland SW., Armstrong W., Jefferson N., Clearfield NE., and Cambria SE. Length 33 ms. breadth 23; area 470 sqms. Surface hilly, broken and soil generally rocky and except near the streams barren. It is separated from Westmoreland by the Connaugh river, and mostly drained by the creeks of that name and others flowing into the Alleghany, but on its extreme eastern border, the W. branch of Susquehanna has its source. Chief town, Ind. Pop. 1820, 8882. Ctl. lat. $40^{\circ} 42'$ N. lon. W. C. $2^{\circ} 5'$ W.

Indiana, pstv. and seat of justice, Ind. cty., Penn., 26 ms. SE. from Kittanning, and 35° NE. from Greensburg. Lat. $40^{\circ} 38'$ N. lon. W. C. $2^{\circ} 8'$ W.

Having an outline of - - - 973

Area 34,000 sqms.; 21,760,000 acres.

The longest line that can be drawn in Indiana, is from its SW. to its NE. angle, 325 ms.

Its mean breadth between Ohio and Ill., 150 miles.

Extreme S. at the mouth of Wabash, $37^{\circ} 49'$.

Extreme N. along the territory of Michigan, $41^{\circ} 45'$.

The position of this state lying lengthwise, N. and S., exposes it to considerable vicissitude of seasons and difference of temperature. It is, still less than Ohio, marked by bold and prominent scenery. Advancing towards the lowest depression of the Mississippi basin, its surface is in most places monotonous, and in the central and northern parts level and marshy. In every general attribute, the two states of Ohio and Indiana, have, however, so much resemblance, that the same terms of description apply to both. They are in fact naturally, one undivided part of the right slope of the Ohio valley; and as such might be connected in geographical description.

The prairies which we have found commencing in Ohio, expand in entering Indiana. The central flat or table land, is also wider in the latter than in the former. The sources of the Ill., Wabash, St. Joseph, and Maumee, are all on this table land. The Maumee is a very remarkable stream. Its two superior branches, the St. Joseph and St. Mary's, unite in Indiana. The St. Mary's river rises in Allan and Mercer cty. in Ohio, and pursues a NW. course of 65 ms. to Fort Wayne. The St. Joseph river rises in Michigan, within less than 20 ms. of the mouth of Maumee, flows 80 ms. SW. to Fort Wayne, unites with the St. Mary's river at that place, and forms the Maumee. The latter, literally turns upon its constituents, flows NE. 60 ms., and falls into the SW. angle of Lake Erie.

From the junction of the St. Mary's and St. Joseph's rivers, at Fort Wayne, to the navigable sources of Wabash is not 10 ms.

The country before us, is one widely extended flat, interspersed with small lakes, low, long ridges of arable land, and much swamp. Prairies extend themselves between the streams. The waters are sluggish in their descent. The country round the extreme S. bay of Lake Michigan, has the appearance of the sea marshes

of Louisiana. Low flooded praries intersected by lakes and interlocking creeks. No eminences are seen; one unbroken horizon encircles the eye. It is the same, timber excepted, at the mouth of the Maumee. I sailed in a very clear morning into the bay at its mouth, and very carefully swept my eye repeatedly around the limit of vision, but none, not the smallest swell in the landscape met my view. The resemblance to many a scene I had previously examined in Louisiana was indeed striking. The resemblance is, however, still more strong at the bottom of Michigan, at the NW. part of Indiana.

In proportion to extent, Indiana does not possess as much arable land as does Ohio. That part of both states, lying within 100 ms. of Ohio river, is, as I have already observed, a continuation of one natural section, and of course similar in common physiognomy. This tract would be found to enter Indiana, near where its western meridian leaves the Wabash, and winding through the state, between the sources of White and Wabash rivers, would enter Ohio in Mercer cty.; and following in the latter state the general course of Ohio river, would merge into Lake Erie, between black and Huron rivers in Huron cty.

* This fine margin includes all the hilly, and most of the rolling tracts of both states; leaving to the NW., the level plains we have already noticed. It will at once be seen by a glance on a map of both states, that the level region of Indiana is much more comparatively extensive than that of Ohio.

By an act of Congress, passed May 26th, 1824, Indiana is authorized to open a canal from the Wabash to Maumee, through the lands of the U. S. This canal is to be open by 1839, or the act of Congress to become null and void.

The civil and political subdivisions of Indiana are the following, with the result of the census of 1820, subjoined.

Those cities, without an annexed pop. have been formed since 1820, or for some other reason, not named in the census of that year.

In a review, however, of the settled parts of Indiana, the cities of Wabash and Delaware with the adjacent Indian country ought to be excluded, as their extent is beyond every reasonable proportion to their pop.; and more, these cities are mere momentary divisions of convenience, occupying the central and otherwise unappropriated parts of the state. Rejecting therefore the area of these three sections, amounting together to 20,022 sqms., the actually inhabited section of Indiana, will be restricted to 13,972, say 14,000 sqms. Deducting 3824, the number of persons given by the census, as inhabitants of Delaware and Wabash, from 147,178, will yield a balance of 143,354, as the compact mass of pop. in Indiana, on 14,000 sqms., or a little more than 10 to the sqm.

The progressive pop. of this state has been exceedingly rapid since 1800, at which epoch it stood at 5640. In 1810, the inhabitants amounted to 24,520. The next period of ten years swelled the pop., as we have seen, to 147,178.

This increasing body is composed of whites, 145,758; free persons of colour, 1230, and 190 slaves. The pop. of this state in 1825, was estimated at 250,000.

They are classed by the census thus:

Indiana was admitted into the union as a state, December, 1816.

Indian Old Town, island and tp. Penobscot cty. Maine, in Penobscot river just above the great falls. Pop. about 500 Indians.

Indianapolis, pstv. and seat of government for Indiana, is situated in Marion cty. of that

state, on the left bank of White river, below the mouth of Fall creek; distant 120 ms. NW. from Cincinnati, and 130 a little W. of N. from Louisville. Indianapolis stands very near the centre of the state, in a very productive tract of country. N. lat. $39^{\circ} 47'$, lon. W. C. $9^{\circ} 3' W.$

The rapid increase of this new town, is described in the following words, extracted from the first newspaper published there, in 1822.

"The improvement of this town, since the sale of lots in October last, has surpassed the expectations of those who entertained the greatest hope of its future prosperity. There have been erected forty dwelling houses and several work-shops, since that period, and many other buildings are now in contemplation. One grist and two saw-mills are now in operation, within one mile of the centre of the town, and several others are nearly ready to be put in operation equally as near. Business is comparatively lively at this time. We have already mechanics and professional men of the following description and number, to wit: 13 carpenters and joiners, 4 cabinet-makers, 8 blacksmiths, 4 boat and shoe-makers, 2 tailors, 1 hatter, 2 tanners, 1 saddler, 1 cooper, 4 bricklayers, 2 merchants, 7 houses of entertainment, 2 groceries, 1 school-master, 4 physicians, 1 minister of the gospel, and 3 counsellors at law."

Indian Rivers. There are several small streams so called in the U. S. One Washington cty., Maine, between Addison and Jonesborough; another N. H., one of the sources of the Connecticut; one in N. Y., the western branch of the Oswegatchie, a stream of Sussex cty. Del., heading with the Nanticoke river, and flowing E. enters Rehoboth a bay of the Atlantic Ocean, 12 ms. S. from Henlopen; a sound of Florida on the Atlantic coast, N. lat. 27° ; and a river of Lou., a branch of New river.

Indian river, hundred of Sussex cty. Del., on Indian river. Pop. 1820, 1887.

Indian-town, village, Dorchester cty. Md., on the left side of the Choptank river, 3 ms. SW. from New Market.

Indian-town, pstv. Currituck cty. N. C., 59 ms. ENE. from Edenton.

Indian-town, pstv. Williamsburg district, S. C., on Cedar creek, 80 ms. NNE. from Charleston.

Indian-Wheeling, creek of Belmont cty. Ohio, falls into Ohio river, opposite Wheeling in river.

Indies, East. See *Oceanica*.

Indies, West. This misnomer of that elongated insular group between the two sections of America, was imposed by Columbus, on his discovery of America, from supposing himself approaching the continent of Asia. The name has been continued by the mere force of habit. In gratitude, and an act of justice due to the illustrious and injured Columbus, these islands have received in the most respectable geographical works, the appropriate name of "The Columbian Archipelago." The English mariners designate them as the Windward, and Leeward islands; and the French by a term equally vague, as "The Greater and Lesser Antilles." It is probable, however, that the great American Archipelago will remain to be designated in the U. S. as West Indies. It is

very difficult to change an established general term.

Glancing our eye on a Map of the whole of America, with the West Indies, we at once perceive that the latter is a prolongation of the mountains of Cumana. La Margarita, the Grenadines, Barbadoes, Martinico, Dominica, Guadalupe, Grande Terre, Marie Galante, St. Christophers, St. Eustatius, and the Virgin islands, extend from Cumana in a northerly direction, from lat. 11° to $18^{\circ} 30' N.$ These small islands, known as the Windward and Leeward islands, and from the aboriginal pop. the Caribbean islands, separate the Atlantic Ocean from the Caribbean sea. The straits intervening between them, are inlets of the tropic current, or Gulf stream, from the Atlantic Ocean, in its passage into the Caribbean sea. With the Virgin islands, the West Indies turn to NW. and SE., and what is very remarkable, almost exactly parallel to the opposing coast of S. Asia, lying in a direction nearly E. and W.; Porto Rico, St. Domingo, and Jamaica, stretch from $11^{\circ} 35' E.$ from W. C. to $1^{\circ} 40' W.$ of that meridian; but Cuba and the Bahamas, opening like forceps, enclose the southern point of Florida, leaving a deep and wide channel, through which the tropic flood escapes from the Mexican Gulf into the northern Atlantic. The islands of the West Indies, are almost uniformly mountainous in the interior, with a sloping border more or less alluvial. Madrepore or coral rocks line many of their shores, exhibiting a strong analogy with the groups of Australasia and Polynesia. Lying in great part within, or very near the northern tropic, the climate of the W. Indies varies but little in the different islands, except from difference of level. The mean temperature of the sea coasts, is about 78° of Fahrenheit. There are but two seasons in this archipelago; these are the wet and dry. These seasons have no very definite points of separation; but in general the dry season continues from the beginning of May, to the end of September. The rainy season sets in with October, and continues to the latter part of April. The climate of the whole region is destructive to northern constitutions, and happily, to armies in particular. The higher parts of St. Domingo, Jamaica, and Cuba, are exceptions, but tracts above 1400 feet are few, and confined in extent. In a treatise so brief as this, it cannot be expected that we can insert the various vegetable products of the West Indies; we can only observe that the numerous islands, from the variety of soil, and elevation are capable of sustaining an unexampled variety of trees, plants and herbs. The most important vegetables, cultivated by the inhabitants, are, sugar-cane, coffee, pimento or allspice, cotton, one species, but many varieties, ignames, potato, maize, and manioc.

The Spanish pop. yet retain the most valuable portion of the West Indies. That nation holds Cuba, and Puerto Rico, with some neighbouring islets. The British have procured the next most important portion; they possess Jamaica, the Lucayes, or Bahamas, Anguilla, Barbuda, Antigua, St. Christophers, Nevis, Montserrat, Dominico, St. Lucia, St. Vincents, the Grenadines, Barbadoes, Tobago, and Trinidad.

Appertaining to the kingdom of the Netherlands, are, St. Eustatius, St. Saba, Curacao, Bonair, and Aruba. Denmark holds Santa Cruz, and St. Thomas. France possesses Guadaloupe, Marie Galante, Grande Terre, and Martinico.

The second island of the West Indies, St. Domingo, or more correctly Hayti, is in possession of the descendants of Africans, though many Spaniards and some French, remain on the island, subjects of the Haytien government. It is difficult to fix the pop. of this diversified Archipelago, but it cannot fall much, if any, short of 3,000,000; of which full four-fifths are blacks, directly from Africa, or the descendants of African nations. See the different islands under their respective heads.

Indigirka, large river of Russia, in northern Asia, rises in the Yablonoy mountains, about 170 ms. from the sea of Ochotsk, and flowing a little E. of N. by comparative courses 700 ms., falls into the Northern Ocean, 350 ms. E. from the mouth of the Lena.

It is, exclusive of the isles, about 30 ms. long from E. to W., and 50 broad from N. to S. It abounds with iron ore, and produces plenty of oak and fir; it abounds with pastures, but little corn, and is reckoned one of the most barren counties in Stld. Pop. 1801, 74,292, in 1811, 78,336, and in 1821, 90,157.

Inverness, tp. Buckingham cy. L. C., on the waters of Becancour river, 50 ms. SSW. from Quebec.

Ioannina, city of European Turkey, in Albania, on a lake, 40 ms. a little W. of N. from Arta, at N. lat. $39^{\circ} 26'$. It is situated about 30 ms. inland, and in a direction nearly due E. from the island of Corfu.

"The very existence of such a city, as Ioannina," says Mr. Hobhouse, "seems until very lately, to be almost unknown, and yet, I should suppose it, after Salonica and Adrianople, (he should have added Constantinople, certainly) to be the most considerable place in European Turkey."

"This city stands upon the western banks of the lake, at about 2 ms. from its northern extremity. In its utmost length it may be perhaps 2 ms. and a half, and in breadth, though in many places much narrower, nearly a mile. Immediately near the lake it stands on a flat, but rising and uneven ground. A triangular peninsula juts into the lake, and contains the residence of the Pasha. The houses are many of

them large and well built, but from their latticed small windows and large folding doors, have a gloomy and inhospitable appearance from without; being furnished with open galleries, and connected with good gardens in the rear, many that belong to the higher classes, have, however, a lively and pleasant appearance within. Ioannina is a place of much trade for a Turkish city; exports, oil, wool, corn, and tobacco, for the ports of the Adriatic and Naples; and for inland circulation through Albania and Roumelia, spun cottons from the plains of Tricala, stocks of guns, and pistols mounted in chased silver, both plain and gilt, and also embroidered velvets, stuffs, and cloths, which are here better wrought than in any other part of Turkey in Europe. Pop. perhaps 40,000, of which one-tenth are Mahometans, the residue Christians, with a few Jews. This city occupies part of a mountain valley; the lake is in some places bordered by plains, but to the E., NE., and N., at a short distance, rise mountains of great mass and extent. The vale of Ioannina is about 25 ms. long, and from 1 to 4 wide, and terminated on the SE., S., SW., and W. by a hilly broken country. It is situated in a mountainous, but fertile and romantic region, and has been recently rendered remarkable as being the scene of the power, wealth, tragic adventures, and final catastrophe of Ali Pasha. Since the death of this ferocious chief, the city has been restored to the Ottoman empire.

Ionis, pstv. Onondago cy. N. Y., NW. from Salina, and by pstrd. 157 ms. NW. from Albany.

Ionian, or *Republic of the Seven Islands*. This recently established nominal republic, is composed of the islands along the SW. coast of Greece, from 36° to 40° . The seven principal islands, which give name to the state, are Corfu, ancient Coreyra, Cephalonia, Zante, Santa Maura, Ithaca, Cyriago, and Paxo. Entire area, about 1500 sqms., and peopled by 200,000 inhabitants. Since the Congress of Vienna, in 1815, the Ionian republic has been abandoned to the British government.

Iredell, cty. of N. C.; bounded by Mecklenburg S., Lincoln SW., Burke W., Wilkes NW., Surry N. and Rowan E.; length 40, width 20 ms.; area 800 sqms. Surface hilly, and in part mountainous. Soil fertile. Chief town, Statesville. Pop. 1820, 13,071. lat. 36°, and lon. W. C. 4° intersect in the N. part of this cty.

Irekin, Jerkin, or *Yarkan*, rich and populous town of Tartary, the capital of Bocharia, with a castle. It is the staple town of all the trade carried on between India and the N. part of Asia. The Ralmucks are masters of it, and never disturb any one on account of their religion. It is 8 ms. N. of Cashgur. Lon. 73° 25' E. lat. 41° 40' N.

Ireland, large island of Europe, lying to the W. of that of Great Britain. It is 280 ms. in length, and 160 in breadth; bounded on the E. by St. George's channel and the Irish sea, which separate it from England and Wales; on the NE. by a channel, called the N. Channel, 34 ms. broad, which separates it from Scotland; and on every other side by the ocean. It contains about 19,436,000 acres. Ireland is divided into four provinces; namely, Ulster to the N., Leinster to the E., Munster to the S., and Connaught to the W.; and these are subdivided into 32 cities. Ulster contains the cities of Down, Armagh, Monaghan, Cavan, Antrim, Londonderry, Tyrone, Fermanagh, and Donegal; Leinster has those of Dublin, Louth, Wicklow, Wexford, Longford, East Meath, West Meath, King's county, Queen's county, Kilkenny, Kildair, and Carlow; Munster includes, Clair, Cork, Kerry, Limerick, Tipperary, and Waterford; and Connaught has Leitrim, Roscommon, Mayo, Sligo, and Galway. The climate of Ireland is mild and temperate, but more humid than in England. In general it is a level country, well watered with lakes and rivers; and the soil, in most parts, is very good and fertile; even in those places where the bogs and morasses have been drained, there is good meadow ground. It produces corn, hemp, and flax, in great plenty; and there are so many cattle, that beef, and butter are exported to foreign parts; and not only the English, but other ships, frequent-

ly come to be victualled here. The other commodities are hides, wool, tallow, wood, salt, honey, and wax. The principal manufacture, is fine linen cloth, which is brought to great perfection, and the trade in it is very great. This country is well situated for foreign trade on account of its many secure and commodious bays and harbours. Its principal rivers are the Shannon, Foyle, Liffe, Boye, Surry, Barrow, Blackwater and Lee. The laws of Ireland differ but little from those of England, and the established religion is the same, but the majority of the people are Roman Catholics, and yet retain their nominal bishops and dignitaries; the ecclesiastical districts are four archbishoprics and eighteen bishoprics; the former are Armagh, Dublin, Cashel, and Tuam; the latter are Dromere, Down, and Connor, Londonderry, Raphoe, Clogher, Kilmore, and Ardagh, Meath, Kildare, Ferns and Leighlin, Ossory, Waterford, and Lismore, Cloyne, Cork, and Ross, Limerick, Ardfert, and Aghadoc, Killaloe, and Killenora, Clonfert, Kilmacduagh, Elpin, and Killala, and Achornry.

Formerly this kingdom had a parliament, which was subordinate to that of Great Britain; but, in 1800, it was deemed expedient for the welfare of Ireland that it should be united to Great Britain. The two parliaments passed acts for that purpose, and the two kingdoms, at the commencement of 1801, were styled the United Kingdom of Great Britain and Ireland and 32 peers (four of them bishops) and 100 commoners of Ireland, are elected to represent that country in the Imperial Parliament, assembled in England. The Lord Lieutenant of Ireland, as well as the council, are appointed, from time to time by the king. The country people in Ireland uncorrupted by commerce, are remarkably hospitable, and very warm in all their affections. The stranger who has dwelt in a commercial city, and been long inured to that general neglect of the pious offices of humanity, which the incessant pursuit of gain produces, on passing through their country, is surprised at the earnestness they manifest in serving him, or in helping him on his way: he is also astonished on observing how these simple people reckon upon a similar disposition, as a thing of course, in the country about: "I am sorry I cannot go with you now, but when you get to the house beyond, why Mr. Such-a-one will send a boy with you, till you are after crossing the bog, and then you will soon be at the village; and why, if you cannot stay all night with them, they will some of them go with you." Such are the unaffected replies the traveller meets with in this hospitable land; and even in the towns, formality and etiquette, are often so lost in hearty salutations, and a familiar manner of address, that the stranger soon feels himself at home, and imagines the people about him all relations. It is a most grievous circumstance, that this amiable people should sometimes be provoked to rise upon those who are over them, when, unhappily giving a loose to their revenge, they sometimes commit such violent acts, as to induce those who do not know their provocations, to think they are wantonly barbarous, instead of barbarously avengeful. The condi-

tion of the common people has been always very wretched: they were so poor, and it was so hard for them to get a livelihood, that they frequently went into other countries to seek their fortunes; and, particularly, great numbers went over to the plantations in America. The diet consists chiefly of coarse bread, potatoes, and butter-milk; the favourite liquor is usquebaugh, an ardent distillation from corn; and the rural cottage is a wretched hovel of mud. The manners of the superior classes differ little from those of the same rank in England; but the gentry are more addicted to hunting and other robust exercises, than to literature and the arts. That part of the inhabitants, called the Wild Irish, were formerly as savage as the native Americans; and like them, lived in huts, making a fire in the middle of them, but it is to be hoped, that all the rude and barbarous customs, as well as every other trace of wretchedness and degradation, will vanish in time, and such measures be taken as shall remove all restrictions on their trade and commerce, and admit them to an equal share of all the advantages enjoyed by the empire of which they make a part. Dublin is the capital.

The following notice of the progressive pop. of Ireland was arranged from the first No. of the Dublin Philosophical Journal, and Scientific Review, and republished in the Nat. Int. May 11th, 1825.

In the returns made pursuant to an act of Parliament, the pop. of Ireland in 1821, is said to be 6,801,829, viz. males 3,341,926, females 3,459,901.

The density of this pop. is 363 persons to an Irish sqm., being three times as populous as Sttd., one and a half as populous as France, and twice as populous as Germany.—The pop. of Ireland to that of Eng., is as 223 to 207, the latter however, are not diffused over the country, but congregated in cities and manufacturing districts.

Ireland, in every point of view, is interesting to the Statesman and Political Economist, but in none, more than in the increase and decrease of her pop.; at the commencement of the 17th century, (Morrison's estimate,) 700,000, is supposed not to be under the truth; at the commencement of the war of 1641, the pop. consisted of 1,400,000, and in 1671, 1,100,000. This diminution may be accounted for; there were, during the interval, in the country, at the same time, five hostile armies, arranged under the banners of five different parties, "any two of which, had they met, would have contended with the most deadly rancour." In 1695, Capt. South makes the pop. 1,034,102. About this period, the Irish began to be an object of ridicule to the London populace, by their fondness

for the *bane of Cobbett*, the *meaty potato*—and the increase of pop. is thenceforward astonishing. In 126 years the pop. of the Cty. of Ar-magh has increased *eight fold*; Louth, *six fold*; and the kingdom at large, *seven fold*; but the Cty. of Meath not quite four fold; it is, however, a *wheat producing* soil. See *Great Britain*, for the tabular pop. of Ireland in 1821.

Izab, town of the country of Cabul, seated near a western branch of the Indus, 110 ms. SSW. of Cabul. Lon. 68° 25' E. lat. 33° 20' N.

Irkeu, or *Irkien*. See *Yurkan*.

Irkoutsck, city of Asiatic Russia, on the Angara river. It is the capital of the vast government of the same name. Lon. 103° 30' E. lat. 52° 16' N.

Irkutsk, largest and least populous government of the Russian empire, comprising all the E. part of Siberia, from the Northern Ocean to the frontiers of Chinese Tartary, and from the boundaries of the government of Tobolsk to the Eastern Ocean. This large territory was gradually conquered and appropriated by the Russians in their desultory excursions from Tobolsk. It is divided into the four provinces of Irkutsk, Nertshink, Yakutsk, and Okotsk.

Irois, Cape, western, extremity of Hispaniola, or St. Domingo.

Iron acton, village of Eng. in Gloucestershire, at the conflux, of the Staure and Laden, which form the river Frome, 10 ms. NE. of Bristol. Much iron has formerly been dug up, and many iron works, and great heaps of cinders are to be seen here.

Irondequot, bay of lake Ontario, Monroe Cty. N. Y.

Irondequot, creek Monroe Cty. N. Y., discharges its waters into the bay of the same name. The Grand Western Canal of N. Y. crosses this creek, by very expensive and massive works.

Iron Mountains, local term for that ridge of the Appalachian chain, which separates N. C. from Ten.

Iroquois, *Pointe Aux*, St. Lawrence Cty. N. Y., on the river St. Lawrence, 6 or 7 ms. above the Rapid plat, it is advantageously situated for commanding the passage up and down the St. Lawrence.

Irrawaddy, or *Irawati*, principal river of the Birman empire. It rises in the mountains of Tibet, and flowing nearly S. falls into the bay of Bengal at about lat. 16° N. forming, like the Ganges, a large delta. The geography of the Irrawaddy is yet very imperfect; nor has the learned and sagacious Malte Brun, been able to determine its source.

Irramango, considerable Island, and one of the New Hebrides, in the South Sea. Lon. 169° 20' E. lat. 18° 48' S.

Irronam, one of the Hebrides, in the South Sea, near Taana. Lon. 170° 26' E. lat. 19° 31' S.

Irtysch, large river of Asia, in Siberia, which rises in the country of the Kalmucs, and running from the S. to W. falls into the Oby. The Irtysch, rises upon the table land of Asia, first flows into, and again issues from the lake of Saissau-Nor. After a course of about 250 ms., it passes the Altaian mountains, and enters Asiatic Russia. Below its passage through the Altai the Irtysch flows to the NW. by comparative courses, about 1000 ms. to Samarov where it unites with the Oby. The Irtysch, augmented

by many large tributaries, is in fact the main stream, though the united waters take the name of Obv.

Irvile, pstv. in the western part of Muskingum co. Ohio, 12 ms. NW. from Zanesville.

Irvine, or *Irwine*, river of Stld., in Ayrshire, which descending from the mountains on the E., passes by Derval, Newmills, Galston and Riccarton, and falls into the frith of Clyde, close by the town of Irvine.

Irvine, or *Irwine*, royal borough and seaport of Stld., in Ayrshire, seated at the mouth of a river of the same name, on the frith of Clyde, 15 ms. Istria now forms a part of the Austrian kingdom of Illyria. Capo d'Istria is the capital.

Italy, one of the finest and most celebrated countries in Europe; bounded on the NNW. and NE. by France, Switzerland, the country of the Grisons, and Germany; on the E. by the Gulf of Venice, and on the S. and W. by the Mediterranean; its figure bearing some resemblance to that of a boot. Its length from Aosta, at the foot of the Alps, in Mount Blanc, Savoy, to the utmost verge of Calabria, in Naples, is about 600 ms.; but its breadth is very unequal, in some places near 400 ms., in others not above 25 or 30. It was formerly the seat of the Roman empire, and afterwards of that more astonishing usurpation the dominion of the pope. In the middle ages the kingdom of Lombardy and

that of Naples held the two extremes, and the Ecclesiastical and Tuscan states occupied the centre. In more modern times the northern part became divided into a great number of states; and previous to the alterations made by the late French government, the whole country was divided in the following manner. Between the confines of France and Switzerland, on the W. and N. were the continental dominions of the king of Sardinia, namely, Savoy, Nice, Piedmont, part of the Milanese and Oneglia. To the NE. are the territories of Venice, which are enumerated under that article. S. of these, were the dominions of the emperor of Germany, namely, part of the Milanese and Mantuan; and S. of the latter is the Modenese, which belonged to the duke of Modena. W. of the Modenese is the duchy of Parma, to the SW. of which lies the republic of Genoa, and SE. of Genoa, that of Lucca. Hence extends, along the coast of the Mediterranean, the grand duchy of Tuscany. The pope's territories lie NE. and E. of Tuscany, between the Gulf of Venice and the Mediterranean; and all S. of this is the kingdom of Naples. By the treaty of Campo Formio, in 1797, the Venetian territories to the E. and N. of the river Adige were ceded to Austria; and the remainder of the Venetian states, with the duchies of Modena, Milan and Mantua, the principality of Massa, and the three legations of Ferrara, Bologna, and Romagna in the pope's dominions, were erected into a government by the French, and called the Cisalpine Republic. This republic was overturned in 1799, but restored after the battle of Marengo, in 1800, and in 1802, it received a new constitution, under the name of the Italian Republic, and Bonaparte, then first consul of France, was elected president. In 1806, the Italian republic was erected into a kingdom, and the emperor of France assumed the title of King of Italy. In December following, the Austrian part of the Venetian states were added to its territories, by the treaty of Presburg. The kingdom was divided into departments, and the city of Milan was the capital. But the important changes that have lately taken place in Europe, have again deranged the political situation of this country. The kingdom of Italy has been overturned; and although a part of its territories has been restored to its former possessors, yet the greater part was first provisionally taken possession of by Austria, and by the Congress of Vienna, finally incorporated into the Lombardo Venetian kingdom. The air of Italy is very different according to the different situation of the countries it contains: in those on the NE. side of the Appennines, it is more temperate; but on the SW. it is very warm, in Campagna di Roma, and the Ferrarese, it is said to be unwholesome, from the lands not being duly cultivated, nor the marshes drained; but in the other parts it is generally pure, dry and healthy. The principal rivers are the Po, Tiber, Arno, Adige, and Yar; and there are several fine lakes, as the Maggiore, Lugano, Como, Garda, Perugia, Bracciano, and Celano. The soil, in general, is very fertile. It produces a great variety of wines, and the best oil in Europe; excellent silk in abundance; corn

of all sorts, but not in such plenty as in some other countries; oranges, lemons, citrons, pomegranates, almonds, raisins, sugar, figs, peaches, apricots, pears, apples, filberts, chestnuts, &c. Most of these fruits were at first imported by the Romans from Asia, Asia Minor, Greece, Africa and Syria, and were not the natural products of the soil.

This country also yields good pasture, and abounds with cattle, sheep, goats, buffaloes; wild boars, mules, and horses. The forests are well stored with game; and the mountains have not only mines of iron, lead, alum, sulphur, marble of all sorts, alabaster, jasper, porphyry, &c., but also gold and silver, with a great variety of aromatic herbs, trees, shrubs, and evergreens. Wine, oil, perfumes, fruits and silks, are the principal articles of exportation; and great sums of money are expended by travellers in the purchase of pictures, curiosities, relics, antiquities, &c. There are forty-one archbishoprics in Italy, but the bishoprics are too indefinite and arbitrary to be depended on; the pope creating or suppressing them as he pleases. The established religion is the Roman Catholic, but all sects live unmolested, provided no gross insult is offered to their worship. Their language, corruption of the Latin, is remarkable for its smoothness, and is said to be spoken in its greatest purity at Florence. Further particulars of this country will be found under the names of its particular divisions, as Naples, &c.

Italy is now subdivided into the kingdom of the two Sicilies, states of the Church; Grand Duchy of Tuscany; Austrian Italy; Sardinia; Parma; Modena; Lucca; and San Marina. Area 117,000 sqns. Pop. about 20,000,000.
